Config & Maintenance	3
Activities	5
Quest Board	14

Game Master Commands

All commands in this chapter require the GM role.

Game Master Rolls

<code>/gm roll notation:1d20+5</code>	(public roll in channel)
<code>/gm roll notation:1d20+5 label:perception</code>	(with label)
<code>/gm roll notation:1d20+5 secret:true</code>	(secret — only you see the result; the roll audit records it either way)
<code>gmr 1d20+5 perception</code>	(typed chat shortcut for the same roll)
<code>gmrs 1d20+5 stealth</code>	(typed shortcut, secret — sent to your DMs)

Game Master HP & Rerolls Targeting

```
!hp @user +5    !hp @user -3
!hp +5 @user    !hp -3 @user
!rerolls @user +1    !rerolls @user -1
```

Game Master Rest Targeting

```
lrest @user    srest @user    hpfull @user    hphalf
@user
```

Preset Tags

```
/char tag assign user:@player tag:Hero of Kalidale
/char tag remove user:@player tag:Hero of Kalidale
/char tag list user:@player
```

Custom Tags

```
/char tag custom action:Create emoji:[any emoji]
name:MyTag
/char tag custom action>Delete name:MyTag
/char tag custom action:List
```

For server emojis: type `\:emojiname:` in chat to get the full ID.

Config & Maintenance

Help & Maintenance

<code>/help</code>	(overview of all command groups)
<code>/help category:start</code>	(the new-player guide — the whole game in one page)
<code>/help category:dice</code>	(detail on a specific group)
<code>/feedback send</code>	(tell the GMs what you think — pick a room, score it 1-10, say your piece; they see who wrote it, no one else sees it happened)
<code>/feedback send quest:...</code>	(the same, about a run you were on — the list is your own runs; the GMs' card says which one)
<code>/roll last:true</code>	(recall your last roll in this channel)

What the Stats Do

<code>/char stat</code>	(what each stat is for, in plain words)
<code>/char prefer atk:Dexterity def:Constitution</code>	(your own, for when auto rolls for you)
<code>/char prefer</code>	(see what is set)
<code>/char prefer atk:Clear it</code>	(go back to using your best)

This matters to players as well as Game Masters: **/fight auto** in full mode rolls for **everyone** in the fight, so without a preference your character swings with their strongest arm whether that suits them or not.

A preference **never overrides a weapon**. If what you asked for is not one of the stats your weapons allow, your best allowed stat is used instead and **/char prefer** tells you so — setting one can only ever narrow a free choice, never break a rule.

Derived Stats

Max HP is **CON plus a flat base**, 2 by default — so CON 10 gives 12 HP. A Game Master can change the base for the whole server with **/config mechanics hpbases base:3**, making it CON+3; set it to 0 for max HP equal to CON alone. Everyone's ceiling moves the moment it is changed, players and NPCs alike, though current HP is left where it is — run a rest or **hpfull @user** to top people up.

Stat	Formula	On change
Max HP	CON + base	HP always maxes

Stat	Formula	On change
Max Rerolls	LCK	Rerolls always max
Heal tracker	White Knight + WIS $\geq$ 5	Appears / disappears automatically

Activities

An activity is a minigame you write for your server: the bot narrates, asks for rolls, branches on the results and loops until someone stops. Fishing, foraging, a gauntlet in the training yard — whatever you script. Only a Game Master can write one; whether players can **start** one is a setting.

Writing One

/activity create opens a paste window for your script; long scripts (over 4000 characters) travel as an attached **.txt** on its **file:** option instead. Pasting the script straight into any channel the bot can read works too. Every route is the same: the script starts with **[ACTIVITY] Name**, re-using a name replaces that activity, and the whole thing is checked before anything is saved.

[ACTIVITY] Fishing

TALLY renown

(a running total, paid out at the end)

SCENE find

SAY Find a spot to set up.

ROLL wis DC15

(a difficulty to beat)

PASS -> cast

FAIL ONE OF

(picks a different line each loop)

This spot does not look all too lucky...

They are not biting here today...

FAIL -> find

(loops back)

SCENE cast

ROLL str|dex|wis

(the roller picks the stat)

1-5 Small fry. -> fight_small

(ranges on the total)

16+ A monster! -> fight_extra

SCENE fight_big

GAUNTLET str|con 14 12 10

(three rolls, each harder to fail)

NAT20 It leaps aboard. -> caught

NAT1 Your line snaps. -> restring

PASS -> caught

FAIL -> find

SCENE caught

GAIN renown 3

(banked on arrival)

CHOICE

(buttons, no dice)

Carry on -> cast
Call it quits -> depot

SCENE depot

END TALLY

(pays the tally out as renown)

What Each Line Does

Line	Meaning
SCENE name	A step. The first one is where a run begins.
SAY ...	Narration. Runs over as many lines as you like.
AS Cave Orc	Speak this scene in an NPC's voice, through their webhook.
ROLL str	Ask for a roll. str dex wis lets the roller choose.
ROLL wis DC15	Beat 15 for PASS, else FAIL.
GAUNTLET str con 14 12 10	A run of rolls, each with its own DC. All must pass.
GAUNTLET 14:str 12:str con 10:dex	The same, but a different check at every step.
1-5 text -> scene	Branch on the roll total. 16+ is open-ended.
PASS / FAIL text -> scene	Branch on the outcome band.
BAND ONE OF	Indented lines below become random variants.
NAT20 / NAT1 text -> scene	Overrides everything else.
CHOICE	Buttons instead of dice. Options are label -> scene.
TALLY renown	Names a running total, declared once at the top.
GAIN renown 3	Adds to the tally when a player arrives at this scene.
END	Finishes. END TALLY pays out, merits:2 awards merits,
	rewards:a silver key is announced for you to hand out.

Without a **DC** or ranges, outcomes fall back to the same bands a ? check uses: **CRIT** a natural 20, **PASS** 15+, **PARTIAL** 10-14, **FAIL** under 10, **FUMBLE** a natural 1. You need not define all of them — a crit falls back to PASS, a fumble to FAIL.

*Validation refuses a branch pointing at a scene that does not exist, a duplicate scene name, a scene with no roll, choice or ending, a roll on something that is not a stat, a gauntlet longer than eight, and a **GAIN** with no **TALLY** — each with the reason, so a run can never dead-end.*

The Anatomy of a Script

The table above is the quick reference; this is the long walk. Each part of a script, what it does at the table, and the shapes it can take — every example below is a working fragment you can lift.

The Header

[ACTIVITY] Fishing

(the first line — everything above it is ignored)

A script begins at **[ACTIVITY] Name** and the name is how everything else refers to it — **/activity run name:Fishing**, **/activity show**, **/activity set**. Writing a script with a name already in use **replaces** that activity in one motion; there is no separate edit-and-save. (**[STORY]** is accepted as an older spelling of the same header.)

SCENE — the Steps of the Tale

SCENE find

(a step, named)

...

SCENE cast

(the next — order on the page does not matter)

PASS -> cast

(branches name their destination)

A scene is one step: it narrates, asks for something — a roll, a choice — and branches. **The first scene in the script is where every run begins**; after that, order on the page means nothing, because movement is only ever by name: **-> cast** goes to **SCENE cast** wherever it was written. Names are single words, and every branch must point at a scene that exists — validation refuses the script otherwise, so a run can never walk off the map.

SAY — Narration

SAY 🗨️ You survey the area for a likely spot,
reading the water for the promise of fish...

(bare lines continue the narration)

Whatever follows **SAY** is spoken by the bot when a player arrives at the scene, and it runs over as many lines as you like — a bare line under a SAY simply continues it. Emoji, ****bold**** and **italics** come through as typed.

AS — an NPC's Voice

SCENE gatekeeper

AS Cave Orc

(this scene speaks through the Cave Orc)

SAY Halt! Who goes there?

Give a scene an **AS** line naming a registered NPC and its narration is delivered through that NPC's webhook — their name, their avatar — exactly as **/npc say** would. The rest of the scene (the roll, the buttons) behaves as normal; only the voice changes.

ROLL — Asking for Dice

ROLL wis	<i>(one stat — outcome read off the bands)</i>
ROLL str dex wis	<i>(the roller chooses which to use)</i>
ROLL wis DC15	<i>(a difficulty: 15+ is PASS, under is FAIL)</i>

A scene with a **ROLL** posts a button per stat it accepts; pressing one rolls **1d20 + that stat from the roller's own sheet**, honouring a Hero's signature advantage and landing in the roll audit like any other roll. Offer several stats with | and the choice belongs to the player — a climb might take **str|dex**, brute force or nimbleness.

Typing answers too: **wis** alone, or **wis I read the currents where the reeds thin** to roll and roleplay in one breath — the flavour is printed with the result. A typed stat only answers the scene if it is one that step accepts; anything else falls through to an ordinary roll and the tale keeps waiting.

With a **DC**, the total decides: meet or beat it for **PASS**, fall short for **FAIL**, and only those two bands apply. Without one, the outcome falls onto the full five-band ladder described under Outcome Bands below.

Ranges — Branching on the Number Itself

ROLL str dex wis	
1-5 Something small brushes the line. -> fight_small	
6-10 A decent weight takes the bait. -> fight_medium	
11-15 The rod bends hard. -> fight_big	
16+ The reel screams. Extraordinary! -> fight_extra	<i>(open-ended top)</i>

Instead of bands, a roll can branch on the **total itself** — each line gives a span, the text to speak, and where to go. **16+** is open at the top. Ranges make graded results natural: the same cast, four sizes of fish. A natural 20 or 1 still overrides a range if a **NAT20** or **NAT1** line is present.

GAUNTLET — a Run of Rolls

GAUNTLET str con 14 12 10	<i>(three checks: DC 14, then 12, then 10)</i>
GAUNTLET 14:str 12:str con 10:dex	<i>(or a different test at every step)</i>
PASS -> caught	<i>(all steps passed)</i>
FAIL -> find	<i>(any step failed)</i>

A **GAUNTLET** is several rolls in a row and **all of them must pass**. The first shape names the stats once and lists the DCs; the second gives each step its own DC and its own stats, so a chase can open on raw speed and end on wits. Eight steps is the ceiling. The scene's

PASS branch fires only when the whole run is survived; **FAIL** fires at the first stumble — and a **NAT20** or **NAT1** on any step can cut straight out of the sequence.

Outcome Bands — CRIT, PASS, PARTIAL, FAIL, FUMBLE

ROLL wis

CRIT	A revelation! -> shortcut	(natural 20)
PASS	-> onward	(total 15+)
PARTIAL	You manage, at a cost. -> onward	(total 10-14)
FAIL	-> lost	(total under 10)
FUMBLE	Utter disaster. -> ditch	(natural 1)

Without a DC or ranges, a roll's outcome lands on the same ladder a ? success check uses: **CRIT** on a natural 20, **PASS** at 15 or more, **PARTIAL** from 10 to 14, **FAIL** below 10, **FUMBLE** on a natural 1. You need not write all five — **a missing CRIT falls back to PASS, a missing FUMBLE to FAIL**, and a missing PARTIAL rides with FAIL — so the common pair **PASS / FAIL** is a complete scene on its own. Each band line may carry text to speak, a destination, or both.

ONE OF — Variety on a Loop

FAIL ONE OF

This spot doesn't look all too lucky... *(indented bare lines are the variants)*

Not a bite. Time to move on.

Try, try, try again!

FAIL -> find *(the same band still branches)*

A band that ends in **ONE OF** collects the indented lines below it and speaks a **different one each time** — the cure for a looping scene repeating itself word for word. The block ends at the next directive or band name, so **FAIL ONE OF** followed later by **FAIL -> find** reads naturally: varied words, one destination.

NAT20 and NAT1 — the Die Overrides Everything

NAT20 It practically leaps into your hands. -> caught

NAT1 The line snaps. -> restring

A **NAT20** or **NAT1** line answers the **natural die**, before modifiers — and it beats a DC, a range, and every band. Inside a gauntlet it cuts out of the sequence on the spot. Use them for the moments that should feel like fate regardless of the arithmetic.

CHOICE — Buttons Instead of Dice

CHOICE

Keep fishing -> cast *(label -> destination)*

Call it a day -> depot

A **CHOICE** scene rolls nothing: it posts one button per line, the label as written, and pressing one moves the run to its destination. Buttons belong to the run's owner — someone else pressing yours is refused — so several players can sit in the same channel, each at their own crossroads. A scene may narrate with SAY first and then offer the choice.

TALLY and GAIN — Keeping Count

TALLY renown	<i>(declared once, near the top)</i>
SCENE caught	
GAIN renown 3	<i>(banked each time a player arrives here)</i>

Declare a **TALLY** once and the run carries a counter. Every scene with a **GAIN** adds its amount **when a player arrives there** — loop through the catch five times and it banks five times. The count is per-run and per-player, shown as it grows, and it pays out only if an ending says so; abandoning a run with **/activity stop** forfeits it. A **GAIN** without a declared **TALLY** is refused at validation.

END — Finishing, and What It Pays

END	<i>(the tale simply ends)</i>
END TALLY	<i>(pays the counter out as renown)</i>
END merits:2	<i>(awards 2 merits to the player)</i>
END rewards:a silver key	<i>(announced for you to hand out)</i>
END TALLY merits:2 rewards:a fine rod	<i>(all three at once)</i>

A scene with **END** stops the run — after its SAY, so an ending can still speak. What follows the word is the payout: **TALLY** converts the banked counter into renown, **merits:** awards merits **automatically**, with the activity's name on the record, and **rewards:** is free text — an item, a favour, a rumour — **announced** for the Game Master to hand over by hand, exactly as quest rewards work. All three combine on one line, in any order after END.

The parts compose. A scene may SAY in an NPC's voice, ROLL with a choice of stats, override on the naturals, vary its failures with ONE OF, and GAIN on arrival — the fishing demo uses nearly every part in forty lines, and /activity show name:Fishing (demo) after running /activity demo reads it back scene by scene as a worked answer key.

Running One

<code>/activity create</code>	(write one — a paste window, or file: a .txt for long scripts (Game Master))
<code>/activity demo which:Kalidale Lore [player:@someone]</code>	(play a built-in activity — the fishing tale or a five-question lore quiz. Name a player and it runs for <i>THEM</i> , so you can hand someone a quiz to sit; nothing is awarded either way)
<code>/activity run name:Fishing [player:@someone]</code>	(start an activity here. Name a player and it runs for <i>THEM</i> — their name on it, their buttons, their score — which is how you set a quiz for someone to sit (GM only). Several runs can go at once in one channel; each answers only to its own player)
<code>/activity list</code> <code>/activity show name:Fishing</code>	(what exists, and read it back in full)
<code>/activity stop</code>	(abandon the run here)
<code>/activity set name:X scene:find field:Roll value:dex</code>	(tweak one line (Game Master))
<code>/activity delete name:X</code>	(remove it (Game Master, asks first))
<code>/config mechanics activities players:true</code>	(let players start them too)

/activity demo plays a ready-made fishing game so you can see the whole system working before writing anything: a difficulty check that loops with a different excuse each time, four sizes of catch chosen by the roll, a gauntlet per size, natural 20s and 1s, and buttons to keep going or head back. It awards **nothing** — no renown, no merits, no items — so it is safe to play with.

One Run Each

An activity run belongs to the person who started it. Several people can play in the same channel at once, each with their own prompts, their own progress and their own rewards — and one person stopping or wandering off does nothing to anyone else. Every post is tagged with whose run it is, and a button only answers for its owner.

<code>/activity run name:Fishing</code>	(start your own run)
<code>/activity stop</code>	(end yours — a Game Master with none running can clear the channel)

Answering a Scene

Press the button, or **type the stat and add your own flavour after it** — both roll the same thing, but typing lets you say what your character is doing.

<code>wis I survey the reeds where the current slows</code>	(rolls WIS, prints your words)
---	--------------------------------

A typed roll only answers the scene if the stat is one that step accepts; anything else falls through to an ordinary roll, untouched. Your stats are shown alongside the result either way.

A Second Chance

After a roll the tale **waits** rather than moving straight on. If you have a reroll to spend you are offered one, alongside a **Carry on** button:

û4 Reroll (2 left)

(spend one and roll again)

► Carry on

(take the result and continue)

Only one reroll is offered per roll — the second result stands, and the tale moves on. If you have none left, or the scene was an ending, it continues as before without stopping to ask. Your progress is saved while it waits, so nothing is lost if you take a moment to decide.

*In /activity demo the reroll is **free** and always offered, even with none left — a dry run should not quietly cost a player their real rerolls just to see what the button does.*

Each scene posts with a button per stat it accepts. **Anyone in the channel can press one** — the roll uses their own sheet, honours a Hero's signature stat, and lands in the roll audit like any other. One run per channel at a time. Writing and deleting always need a Game Master; starting one is GM-only until **/config mechanics activities players:true**.

Renown

Renown is not a currency. It is a running tally of how a character **stands in the world** — what they have done, who has noticed, and how far their name carries. It is earned from quests, encounters and activities, and it is not meant to be traded away for goods. Someone with high renown is **known**; that is the whole of it.

A Game Master can adjust it either way when the story calls for it — a reputation can be damaged as well as built — but it is a record of standing rather than a purse.

/standing renown view
user:@player

/standing renown view

/standing renown leaderboard

(who is best known)

/standing renown history

(where a standing came from)

/standing renown gain user:@a amount:5 reason:Cleared
the Sunken Vault

(Game Master)

/standing renown loss user:@a amount:3
reason:Disgraced at court

(Game Master)

/standing renown set user:@a amount:0

(Game Master)

Every change is logged with its reason, so **/standing renown history** answers how a reputation was built and where it was lost.

Merit

Merit is the earned measure of service — awarded by a Game Master, accumulated across quests and activities, and the thing rank thresholds are set against. Unlike renown, **merit is tradeable**: it can be passed between players, and potentially to and from NPCs, as payment, tribute, a debt settled or a favour bought.

/standing merit give user:@a amount:2 reason:A debt settled

(offer some of your merit)

/standing merit trades

(what is still waiting on a Game Master)

/standing merit cancel id:3

(withdraw one — your own, or any as a Game Master)

No merit moves until a Game Master signs it off. An offer is held and posted to the sheet approval channel with Approve / Refuse buttons; a refusal asks the Game Master why and passes the reason back. Both parties are told when it lands, and it is announced in the channel where it was offered so the table sees the trade happen.

Your balance is checked twice — when you offer, and again when a Game Master approves. If you have spent the merit in between, the trade is voided rather than pushing anyone into the red.

Renown says who you are in the world. Merit is what you have earned and may hand on. A character can be widely known and hold no merit at all, or quietly hold a great deal.

Quest Board

GMs create quests with lore, objectives, details and rewards. Quests are posted as a message with an Apply button and also appear on the board. Players apply, a Game Master approves the party, and on completion merits are auto-awarded while other rewards are listed for the Game Master to hand out.

For Players

<code>/quest board</code>	<i>(list quests (filter: open/active/completed/all))</i>
<code>/quest show number:1</code>	<i>(full details of one quest)</i>
<code>/quest roster number:1</code>	<i>(see applicants and the party)</i>
<code>/quest party apply number:1</code>	<i>(apply to join — or tap Apply on the post)</i>
<code>/quest party withdraw number:1</code>	<i>(leave or cancel your application)</i>
<code>/quest record user:@player</code>	<i>(one player's finished quests — what they have been on)</i>

Quests are auto-numbered for easy recall, e.g. **#001-Goblin Cave** (repeatable quests keep the name and get a fresh number each time). Party size is a hard cap or a suggestion — the Game Master chooses with **hard_cap**, and **force:true** on approve overrides a cap. Point a quest at a thread with **/quest runchannel** and its completion rewards are announced there.

Penned by the DDice Scriptorium · May your rolls be ever in your favour
