Game Master Commands	2
Config & Maintenance	3
NPC System	6
Fight System	8
Merits & Ranks	12
Quest Board	13

Game Master Commands

All commands in this chapter require the GM role.

Game Master Rolls

<code>gmr 1d20+5</code>	(public roll in channel)
<code>gmr 1d20+5 perception</code>	(with label)
<code>gmrs 1d20+5</code>	(secret — sent to Game Master DMs only)
<code>gmrs 1d20+5 stealth</code>	

Game Master HP & Rerolls Targeting

```
!hp @user +5    !hp @user -3
!hp +5 @user    !hp -3 @user
!rerolls @user +1  !rerolls @user -1
```

Game Master Rest Targeting

```
lrest @user    srest @user    hpfull @user    hphalf
@user
```

Preset Tags

```
/tag assign user:@player tag:Hero of Kalidale
/tag remove user:@player tag:Hero of Kalidale
/tag list user:@player
```

Custom Tags

```
/tag custom action:Create emoji:[any emoji]
name:MyTag

/tag custom action>Delete name:MyTag

/tag custom action:List
```

For server emojis: type `\:emojiname:` in chat to get the full ID.

```
/char set field:str value:14 user:@player
```

(Game Master only)

Sheet Import

Paste an exported sheet into any channel the bot watches.

```
[paste sheet] @player
```

(Game Master importing for another player)

Config & Maintenance

Config (Admin only)

<code>/config gmrole role:@Role</code>	(add a GM role — several can be set)
<code>/config gmrole role:@Role remove:true</code>	(remove one)
<code>/config gmrole role:@Role replace:true</code>	(make it the only GM role)
<code>/config gmrole</code>	(list current GM roles)
<code>/config heal charges 3</code>	
<code>/config statallowance points:15 minimum:1</code>	(player build points (omit both to view))
<code>/config npcchannel #channel</code>	(set the NPC image bank channel)
<code>/config npcreroll threshold:8</code>	(NPC auto-reroll on $\text{nat} \leq N$ — 0 disables)
<code>/config fightping enabled:true</code>	(@-mention players on their turn — off by default)
<code>/config rollaudit channel:#gm-rolls</code>	(mirror every roll — raw input, result and jump link)
<code>/config rollaudit test:true</code>	(send a test mirror, report problems)
<code>/config npcstats enabled:true</code>	(reveal NPC stat blocks — hidden by default)
<code>/config approvals channel:#sheet-approvals</code>	(new sheets need GM sign-off)
<code>/config approvals list:true</code>	(every sheet still waiting — from the database)
<code>/config approvals disable:true</code>	(turn approval off)
<code>/config rest type:Short Rest hp:50% rerolls:0%</code>	(% of max)
<code>/config rest type:Short Rest hp:3 rerolls:1</code>	(flat numbers)
<code>/config cleanwebhooks</code>	(remove orphaned NPC webhooks)

NPC roll cards hide STR/CON/DEX/WIS/LCK, the roll modifier and HP totals by default. Players see the name, order, the final roll total, the exact damage each hit deals, and a condition (□ unhurt / wounded / badly hurt / near death / down) instead of numbers — so the fight reads clearly without revealing what an NPC can take. Reveal everything with **`/config npcstats enabled:true`**. NPC management commands are Game Master-only regardless.

A sheet that is **still waiting** can be edited by its owner — spot a mistake before a Game Master gets to it and you can fix it, which retires the old request and posts a fresh one. Only an **approved** sheet is frozen to its owner.

With an approval channel set, a player's new sheet is posted there for sign-off, pinging every GM role, with Approve / Reject buttons. Until approved they can't roll, heal or take fight actions — and

once approved, their whole sheet can only be changed by a GM. Sheets a GM creates or edits skip the queue, and sheets made before approval was enabled keep working until someone edits them.

Every way a player can write to their own sheet goes to the queue: **/char create**, **/char set** (any field — stats, order, class and weapons alike), **/char weaponemoji**, **/profile load** and pasting an exported sheet. Building a character one **/char set** at a time is not a way past a GM. Editing a sheet that is still pending retires the old request and posts a fresh one, so the channel holds one live entry per player rather than a pile of stale ones. A rejected sheet can still be edited by its owner — that is how they fix it — and each edit sends it straight back for another look.

Pressing **Reject** opens a box asking **why**. The note is optional, but it travels with the decision — it is written onto the request in the approval channel, sent to the player with the rejection, and shown again if they try to roll before fixing it, so nobody is left guessing at what to change. Declining an **export** asks the same way.

A **rejection is never the end of it**. A rejected sheet stays editable by its owner, so the player fixes whatever the GM objected to with **/char set** or **/char create** and rejoins the queue on their own. If they believe it was right as it stood, **/char submit** sends it again unchanged. There is no limit — a sheet can go back and forth as many times as it takes, and each resubmission retires the previous request so the channel still holds one live entry per player. The rejection notice spells out both routes, so nobody is left waiting on a GM to do it for them.

A declined **export** works the same way — running **/char export** again puts a fresh request in front of the GMs.

Sheets are accepted from **any channel the bot can read** — an ordinary text channel, a thread, a forum post, an announcement channel, or the text chat inside a **voice or stage channel**. Wherever it came from is recorded with the request, so the decision notice can find its way back there if the player's DMs are closed.

The queue lives in the database, not in a Discord message. **/config approvals list:true** shows every sheet still waiting — who, how long ago, and which channel it came from — even if the request was never posted, was deleted, or landed somewhere nobody reads. If the bot cannot post to the approval channel it says so on that list and pings the GM roles in the channel the sheet was submitted from, so a player is never left locked out in silence.

The roll-audit mirror records every roll, in every channel, with nothing skipped. Prefix rolls, stat shorthand, success checks, rerolls, heals, **/roll**, **/dr** and every fight roll — plus Game Master rolls, including secret **gmrs** ones, so Game Masters are accountable to one another.

A Game Master rolling as an NPC with **/pr roll** is logged under their own name, tagged with the NPC they spoke as — the roll itself goes out through the NPC's webhook, so the audit is the only place it ties back to a person.

Rolls the bot makes for itself are recorded too, attributed to the fighter and tagged **auto**: auto-pilot attacks, defences and reroll answers, initiative at the start of every fight and whenever an NPC joins mid-fight, every roll of a full **/fight auto**, and demo bouts. Rolls typed inside the audit channel itself are mirrored as well — a secret **gmrs** there goes to the Game Master's DMs, so without the mirror it would leave no record at all.

Use **/config rollaudit test:true** to check it works. Set the channel's Discord permissions so only Game Masters can view it.

Several GM roles can be set at once — holding any of them grants GM access. Anyone with the Discord **Manage Server** permission always counts as a GM, so you can never lock yourself out by mis-setting a role.

Each rest value is either a percentage of that resource's max (e.g. 50%) or a flat whole number that sets it exactly (e.g. 3). 0% means leave it untouched. Only the values you provide change.

Help & Maintenance

/help	(overview of all command groups)
/help category:dice	(detail on a specific group)
/lastroll	(recall your last roll in this channel)
/backup now	(export the database to this channel — Game Master)
/backup auto channel:#backups	(daily automatic backups — Game Master)

Destructive actions (*/npc delete*, */fight end*, */quest delete*, */weapon remove*) ask for Confirm / Cancel before running.

Derived Stats

Stat	Formula	On change
Max HP	CON + 2	HP always maxes
Max Rerolls	LCK	Rerolls always max
Heal tracker	White Knight + WIS $\geq$ 5	Appears / disappears automatically

NPC System

All commands in this chapter are Game Master-only.

NPC Management

<code>/npc create name:Cave Orc str:14 con:10 dex:4 wis:2 lck:1 order:Black Knight</code>	(full stat block)
<code>/npc create name:Mystery Figure</code>	(name only — stats added later)
<code>/npc create name:Mystery Figure str:14 con:10</code>	(fill stats in over time)
<code>/npc copy name:Goblin new_name:Goblin 2</code>	(duplicate an NPC, fresh HP)
<code>/npc show name:Goblin</code>	(full stat block for one NPC)
<code>/npc hero name:Goblin stat:str</code>	(make an NPC a Hero with a signature stat)
<code>/npc hero name:Goblin remove:true</code>	(strip Hero status)
<code>/npc list</code>	(shows stats and current HP)
<code>/npc list category:Bandits</code>	(only one category's NPCs)
<code>/npc delete name:Aldric Vane</code>	

NPC HP & Healing

<code>/npc hp name:Goblin value:3</code>	(set exact HP)
<code>/npc hp name:Goblin</code>	(omit value — full heal)
<code>/npc heal names:all</code>	(fully heal every NPC)
<code>/npc heal names:Goblin, Orc</code>	(fully heal the listed NPCs)

Restoring Resources (/gmheal)

<code>/gmheal user:@a</code>	(full HP — the default)
<code>/gmheal user:@a restore:Everything</code>	(HP, rerolls and heal charges)
<code>/gmheal user:@a amount:Half</code>	(restore half of maximum)
<code>/gmheal user:@a amount:Add value:3</code>	(add 3, capped at max)
<code>/gmheal user:@a amount:Exact value:1</code>	(set to an exact figure)
<code>/gmheal npc:Goblin</code>	(one NPC)
<code>/gmheal npc:all</code>	(every NPC at once)

One command for every restore. Works on a player or an NPC (or **all** NPCs), and HP changes sync straight into any active fight. NPCs only have HP; heal charges are skipped for anyone who isn't a White Knight with WIS 5+.

Stats are optional — an NPC can be registered by name (and given an avatar) with no stats at all, then statted up later. Re-running **/npc create** with the same name updates only the fields you supply and leaves the rest untouched.

NPC HP persists between fights. Knocked-down NPCs (0 HP or less) are left out of new fights until restored.

Speaking as an NPC

<code>/pr say name:Cave Orc speech:Halt! Who goes there?</code>	<i>(speech — in quote marks)</i>
<code>/pr say name:Cave Orc action:raises its axe</code>	<i>(action — italic emote)</i>
<code>/pr say name:Cave Orc action:raises its axe speech:Halt!</code>	<i>(both, stacked)</i>
<code>/pr say name:Cave Orc</code>	<i>(opens a writing box)</i>

Posts as the NPC through their webhook — their name and avatar, no dice rolled. Fill **action**, **speech**, or both: the action is italicised and the speech is wrapped in quote marks, stacked on separate lines. Leave both blank and a **writing box** opens with roomy multi-line fields — easier for longer roleplay. Use **raw** to post exactly as typed.

Rolling as an NPC (/pr shorthand)

```
/pr roll name:Cave Orc notation:1d20+8 label:strike
flavour:The orc lunges

/pr create name:Aldric Vane str:8 con:6 dex:10 wis:4
lck:2

/pr list
```

Posts via webhook — appears as the NPC with their name and avatar.

Setting NPC Avatars

1. Admin runs `/config npcchannel #channel` to set the image bank channel.
2. Game Master uploads an image to that channel with the NPC name as the message text.
3. Bot adds a checkmark reaction to confirm. 4. Re-upload with the same name to update.

Bot requires Manage Webhooks permission in the server.

Heroes & Signature Stats

Hero is a Game Master-granted class, not a player choice — players who try to set it are refused. Both player sheets and NPCs can be Heroes.

<code>/char set field:class value:Hero user:@a</code>	<i>(grant Hero to a player sheet)</i>
<code>/char signature user:@a stat:str</code>	<i>(designate their signature stat)</i>
<code>/npc hero name:Aldric stat:dex</code>	<i>(Hero NPC with a signature stat)</i>

A Hero may have one **signature stat** with **5 or more** points. Every roll using that stat — typed shorthand, `/roll`, and both attack and defence in fights, manual or automatic — is made with **advantage**, marked ☐ on the roll card. If the stat later drops below 5 the advantage simply stops applying until it is restored; an explicitly requested disadvantage still wins.

Fight System

Structured fights with initiative, turn order, stat-based rolls and damage tracking.

Commands

<code>/fight addnpc npc:Goblin, Orc</code>	<i>(add NPC(s) mid-fight, Game Master)</i>
<code>/fight order sequence:@a, Goblin, @b</code>	<i>(reorder players + NPCs, Game Master)</i>
<code>/fight atk stat:str npc:Goblin target:@user</code>	<i>(Game Master attacks AS the NPC)</i>
<code>/fight def stat:dex npc:Goblin</code>	<i>(Game Master defends AS the NPC)</i>
<code>/fight skip</code>	<i>(skip the current turn — fighter stays in, Game Master)</i>
<code>/fight hp value:3 target_npc:Orc</code>	<i>(set HP mid-fight, sheet synced, Game Master)</i>
<code>/fight kick target_npc:Orc</code>	<i>(remove a fighter, fight continues, Game Master)</i>
<code>/fight refill npcs:all</code>	<i>("all" or names — refill reroll tokens, Game Master)</i>
<code>/fight auto mode:Full ...</code>	<i>(bot resolves whole fight, Game Master)</i>
<code>/fight auto mode:Full teams:@a @b vs Goblin, Orc</code>	<i>(party-vs-monsters sides, Game Master)</i>
<code>/fight auto mode:NPCs only ...</code>	<i>(bot plays NPCs, Game Master)</i>
<code>/fight auto mode:Demo</code>	<i>(example showcase, Game Master)</i>
<code>/fight auto ... practice:true</code>	<i>(a bout in any auto mode, Game Master)</i>
<code>/fight end</code>	<i>(Game Master only)</i>

How a Fight Runs

When a fight starts, the bot rolls DEX initiative (1d20 + DEX) for every fighter and orders the turn order from highest to lowest, ties broken by the raw d20. Add **manual:true** to skip the roll and keep your listed order, or use **/fight order** with a comma-separated sequence.

Knocked-down fighters: anyone at 0 HP or less is left out when a fight starts or when NPCs are added, with a warning naming them. Restore NPCs with **/npc heal** or **/npc hp**, players with rests or **hpfull @user**.

Practice bouts: add **practice:true** to **/fight start** or **/fight auto** and the fight becomes a friendly spar. Everything runs exactly as normal — initiative, rolls, damage, crits, carry-over effects, rerolls, recap — but the cut-off moves from 0 HP to **2 HP**. A fighter bows out the moment they reach 2, and damage never carries anyone below it, so nobody leaves the yard worse than winded. Sparring partners already at 2 HP or less are left out at the start, the same way knocked-down fighters are. The bout is announced on start, marked on **/fight status**, and noted again in **/fight log**, so a spar can never be mistaken for the real thing.

HP stays in sync: any mid-fight HP change — **!hp**, **!heal**, rests, **/npc hp** or the **/fight hp** command — is mirrored straight into the fight, so a heal is never overwritten by the next exchange. Anywhere a command takes NPC names, **category:Name** adds a whole category at once.

When a Fight Ends

However a fight finishes — a knockout, a forfeit, a kick, **/fight end** or an auto-resolve — a single public **result post** goes to the channel where everyone can read it. Nothing important is left in a private reply: the Game Master's confirmation for **/fight end** stays private, but the result itself is posted for the whole table.

The post names the **victor**, then lists every combatant's **final standing** — exact HP for players, a condition band for NPCs while their stats are hidden — followed by the recap.

The **recap** covers players and NPCs alike, in three parts. **Rolls:** how many attacks and defences each fighter made, their average total, and their best and worst natural dice. **Damage:** dealt and taken, natural 20s and 1s, and rerolls spent. **Blow by blow:** every exchange in order — both rolls, the natural die and the final total for each side, and whether it landed or was blocked, with natural 20s and 1s marked. Very long fights show the most recent exchanges and say how many earlier ones were trimmed; the roll and damage figures still cover the whole fight. Long recaps are split across messages so nothing is lost to Discord's length limit.

/fight log re-posts the last finished fight's recap in that channel at any time, blow-by-blow included.

NPCs as combatants: a Game Master lists NPCs in **npcs:** (comma-separated) on start or **/fight addnpc** later. On an NPC's turn the Game Master adds **npc:Name** to **/fight atk** or **/fight def**; attack an NPC with **target_npc:Name**.

Auto Modes

/fight auto mode:Full rolls attack, defend and damage for everyone and plays the fight through to a winner, saving HP to each combatant's sheet as it changes. Add **teams:@a @b vs Goblin, Orc** for proper sides — fighters only target the enemy team, and the last team standing wins. **mode:NPCs only** starts a normal fight where the bot takes the NPCs' turns automatically while players still use **/fight atk** and **/fight def**. **mode:Demo** runs a throwaway example.

Automatic rolls always use the fighter's highest of STR or DEX, for attack and defence alike (ties go to STR), and post the same full roll card as a manual roll. Each NPC's cards appear under that NPC's own name and avatar (via webhook).

NPC rerolls: in auto modes each NPC carries its own reroll tokens — LCK per fight. A token is spent only when the natural die shows **8 or less** (server-tunable via **/config npcreroll**; 0 disables): a defender about to be hit rerolls first, then a blocked attacker may answer — one each per exchange. **/fight status** shows remaining tokens, and **/fight refill** restores them mid-fight.

Damage

Situation	Damage
Attack total $\geq$ Defence total	1
Attacker natural 20	+1 bonus
Defender natural 1	+1 bonus
Attacker nat 20 + Defender nat 1	4 total
Defence total > Attack total	0 (blocked)
Fighter reaches 0 HP	Knocked down, removed from turn order, HP goes negative

Critical Effects (carry-over)

A natural 1 or natural 20 leaves a mark on the *next* roll, in both manual and auto fights:

Trigger	Effect on the next roll
Natural 1 on an attack	The attacker fumbles — their next defence is rolled as a flat d20 (no stat, no advantage).
Natural 20 on a defence	The defence turns the blow aside and the defender gains +2 on their next attack — unless that attack was itself a natural 20.

Each effect is consumed by the affected fighter's next matching roll and is announced when it lands ("presses the riposte", "defends on a flat d20"). Leaving a fight clears any pending effects.

Merits & Ranks

A milestone-style progression system. Merits are a lifetime tally a Game Master awards; ranks are named tiers with merit thresholds. The bot tracks progress and flags eligibility, but every promotion is decided by a Game Master.

Merits

<code>/merit add user:@player amount:2</code>	<i>(award merits — Game Master)</i>
<code>/merit remove user:@player amount:1</code>	<i>(take merits away — Game Master)</i>
<code>/merit set user:@player amount:10</code>	<i>(set an exact total — Game Master)</i>

Ranks

<code>/rank add name:Knight threshold:5</code>	<i>(create or update a rank — Game Master)</i>
<code>/rank add name:Squire threshold:0 order:0</code>	<i>(order sets junior→senior — Game Master)</i>
<code>/rank promote user:@player rank:Knight</code>	<i>(set a player's rank — Game Master)</i>
<code>/rank eligible</code>	<i>(who has met a threshold but isn't promoted — Game Master)</i>
<code>/rank remove name:Squire</code>	<i>(delete a rank — Game Master)</i>

`/merit view` shows current merits and exactly how many more are needed for the next rank, e.g. “Knight · 7 merits · 8 to Paladin”. Every merit change is recorded — quest rewards show the quest name, manual changes show “by GM” — so `/merit history` answers “who earned what, and when”. Removing a rank doesn't change players who already hold its label.

Quest Board

GMs create quests with lore, objectives, details and rewards. Quests are posted as a message with an Apply button and also appear on the board. Players apply, a Game Master approves the party, and on completion merits are auto-awarded while other rewards are listed for the Game Master to hand out.

For the Game Master

<code>/quest create name:Goblin Cave objectives:... merit_reward:2 party_size:4 hard_cap:true</code>	<i>(create a quest)</i>
<code>/quest post number:1 channel:#board</code>	<i>(post as an embed with an Apply button)</i>
<code>/quest approve number:1 user:@a force:true</code>	<i>(approve an applicant · force past a hard cap)</i>
<code>/quest kick number:1 user:@a</code>	<i>(remove a member or applicant)</i>
<code>/quest runchannel number:1 channel:#thread</code>	<i>(set where it runs & rewards)</i>
<code>/quest start number:1</code>	<i>(lock the party, mark in progress)</i>
<code>/quest complete number:1</code>	<i>(finish — auto-award merits, list rewards)</i>
<code>/quest delete number:1</code>	<i>(remove a quest permanently)</i>

Quests are auto-numbered for easy recall, e.g. **#001-Goblin Cave** (repeatable quests keep the name and get a fresh number each time). Party size is a hard cap or a suggestion — the Game Master chooses with **hard_cap**, and **force:true** on approve overrides a cap. Point a quest at a thread with **/quest runchannel** and its completion rewards are announced there.

Penned by the DDice Scriptorium · May your rolls be ever in your favour
