Start Here

DDice runs the table. It rolls the dice, keeps every character sheet, runs fights turn by turn, posts quests, pays merits and remembers what happened. You talk to it in two ways. **Slash commands** begin with **/** and Discord shows every option as you type — **/roll stat:Strength** is the command **/roll** with its **stat** option filled in. **Typed shorthands** are plain messages the bot watches for — **1d20**, **str**, **hp +2** — for the things you do fifty times a night.

How to Read This Book

Commands are shown as you would type them. **@Players** stands for a player picked from the list Discord offers and **@GMs** for a Game Master (or the GM role); where an example needs real names, **Artorius**, **Meliora** and **Zeus** stand in. **name:**, **number:** and the like are options — type the label, then your answer. Where a line reads **(GM)**, only a Game Master can run it. The chapters follow the order you will meet things: rolling first, then your

character, then fights, quests and standing.

`/help`	*(overview of all command groups)*
`/help category:start`	*(the new-player guide — the whole game in one page)*
`/help category:dice`	*(detail on a specific group)*
`/help category:rules`	*(the live table rules as the bot enforces them — the same words the books use, readable by everyone)*

*Anywhere a command asks for something that already exists — an NPC, a quest, a weapon, a tag, an activity, a category, a recovery schedule, an item someone is carrying — a **dropdown appears as you type**, and you can still type past it freely. Options that name something NEW (create, add) stay free text on purpose.*

Where the News Lands

A forum called **updates** carries one dated thread for every change the bot has had — titled by the day it landed, newest at the top — and every entry the bot has ever announced is there from the first. When something in this book looks different from what the bot does, the updates forum says what changed and when.

Rolling Dice

Type dice notation directly or use any prefix style (r, !r, !roll):

`1d20`	*(bare notation — no prefix needed)*
`r1d20+5`	
`r1d20+5 atk`	*(label shows in bold above result)*
`r1d20+5 atk` `[flavour text on next line]`	*(supports *italic* and **bold**)*

Advantage & Disadvantage

`ra1d20+5`	*(rolls twice, takes higher)*
`rd1d20+5`	*(rolls twice, takes lower)*

Guided Roll (/roll)

`/roll`	*(bare: a flat 1d20 — no stat, no modifier)*
`/roll stat:Strength`	*(pick a stat from the dropdown)*
`/roll stat:Wisdom mode:Advantage`	*(advantage / disadvantage)*
`/roll dice:2d6+3 label:damage`	*(custom notation instead of a stat)*
`/roll stat:Dexterity success_check:true` `label:sneak flavour:*slips into shadow*`	*(label + RP text)*

`/roll last:true`	*(recall your last roll in this channel)*

Every part of **/roll** is a dropdown or field — stat, advantage, success check, label and RP flavour — so nothing has to be memorised. Choose either a **stat** (rolls 1d20 + that stat from your sheet) or custom **dice**. The result uses the same card as a typed roll.

? Success Check Rolls

Prefix **?** instead of **r** to get a success outcome:

```
?1d20+5   ?ra1d20+5   ?rd1d20+5   ?rr   ?str
?wisa
```

Result	Outcome
Natural 20 / max face	Critical Success (gold)
Natural 1 / min face	Critical Fail (red)
Total 15+	Success
Total 10–14	Partial Success
Total 2–9	Fail

The same holds for every check against a DC — a Game Master's called check, a planted button, a group check, a target: a natural 20 passes and a natural 1 fails, whatever the total. A natural 20 on a target beats it outright.

Critical Hits & Fails (all rolls)

Natural max on any die → gold label + result.
Natural 1 on any die → red label + result.

One Reroll Per Roll

A roll can be rerolled **once**. Whatever the second attempt says, it stands — you cannot keep spending rerolls on the same roll until the dice agree with you. This holds everywhere: typed rerolls, **/fight rr**, and the prompt inside an activity.

In a fight each side of an exchange gets its own second chance, so an attacker rerolling does not use up the defender's. A fresh exchange resets both.

Rerolls are still a resource — this is a limit on top of having one to spend, not instead of it.

Rerolls

`rr`	*(costs 1 token)*
`rra`	*(reroll with advantage)*
`rrd`	*(reroll with disadvantage)*

Shorthand: append a reroll set to a stat — **strrr**, **dexrra** (adv), **conrrd** (dis) — to reroll your last roll. A label may follow: **strrr atk**.

The Rules of 5e

A server set to **D&D 5e** plays by the SRD. Only what the SRD releases freely is built in; anything from the Player's Handbook alone — most subclasses, backgrounds, feats — your GMs add through the same custom routes the bot already has.

Set it with **/config channels ruleset system:dnd5e** BEFORE anyone makes a character. It refuses to change once sheets exist, because a sheet written for one system cannot be read as another.

Making a 5e Character

One command builds the sheet: **/dnd create**. Give the six scores, and it works out the rest — modifiers, proficiency from level, and hit points from the class die and CON.

```
/dnd create name:Artorius str:16 dex:14 con:15        (a level 5 fighter in chain mail)
  int:10 wis:12 cha:8 class:Fighter level:5 ac:16
  saves:str, con skills:athletics, perception
```

The class sets the hit die — d12 for a Barbarian, d10 for Fighter, Paladin and Ranger, d8 for Bard, Cleric, Druid, Monk, Rogue and Warlock, d6 for Sorcerer and Wizard. Leave **ac:** out and it is 10 plus your DEX modifier. Saves and skills are written as you say them, separated by commas; an unknown skill is refused with the eighteen listed.

The sheet then reads in 5e terms: each score with its modifier beside it, hit points, Armour Class and proficiency on the face of it, and any saves or skills you are trained in underneath.

Abilities and Modifiers

Six abilities — **STR DEX CON INT WIS CHA** — each a score from which a modifier is taken. Ten is average and adds nothing; every two points either way is one point of modifier.

```
score 8                (modifier −1)
score 10 or 11         (modifier +0)
score 14               (modifier +2)
score 18               (modifier +4)
score 20               (modifier +5)
```

Proficiency

A proficiency bonus is added to anything a character is trained in — attacks with their weapons, saving throws of their class, skills they have taken. It grows with level.

```
levels 1 to 4          (+2)
levels 5 to 8          (+3)
levels 9 to 12         (+4)
levels 13 to 16        (+5)
levels 17 to 20        (+6)
```

Hit Points

At first level, the class hit die plus the CON modifier. Every level after adds half the die (rounded up) plus the CON modifier again. A d10 class with CON 16 has 13 at first level and 22 at second.

Attacks and Armour Class

To attack, roll a d20 and add your modifier and your proficiency. You are trying to reach the target's **Armour Class** — that is just a number, so nobody rolls to defend. Meeting the AC exactly is a hit. A natural 20 always hits and is a critical; a natural 1 always misses, whatever the total.

Damage is the weapon's dice plus the ability modifier. A critical rolls the **dice** twice and leaves the modifier alone — so a 1d8+3 hit that crits is 2d8+3, never 2d8+6.

Levels, Hit Dice and Rest

A level is not just a bigger number. **/dnd levelup** raises it and everything follows: the hit points arrive full, another hit die is added, and the proficiency bonus rises when it is due. A GM can level someone else with **user:**, or jump straight to a level with **to:**.

You carry one **hit die** per level — the die your class rolls. A **short rest** spends one: roll it, add your CON modifier, and heal that much. A **long rest** fills you to full and hands back half your dice, rounded down, never fewer than one.

`!srest`	*(spend a hit die and heal)*
`!lrest`	*(full hit points, half your dice back)*
`/dnd levelup`	*(gain the next level)*
`/dnd levelup user:@Players to:5`	*(a GM setting someone to level 5)*

A level 5 Fighter with CON 15 has 44 hit points, +3 proficiency and five d10 hit dice; a short rest heals between 3 and 12 of them.

Fighting in 5e

Combat runs through the same commands as everywhere else — **/fight start**, **/fight atk**, the turn order, the initiative — but a blow is settled differently. Nobody rolls to defend: the attack is measured against the target's Armour Class and resolves on the spot.

`/fight atk target:@Players`	*(d20 + ability modifier vs their AC)*
`18 vs AC 15`	*(a hit — damage follows at once)*
`natural 20`	*(always hits, and the weapon dice are rolled twice)*
`natural 1`	*(always misses, whatever the total)*

Damage is the weapon's dice plus the ability modifier, and the card shows the working — **1d8 [5] +3** — so nobody has to take the total on trust. A weapon with no dice set swings 1d8.

Dying

At nought hit points a 5e character is dying, not dead. **/dnd deathsave** rolls a d20 — ten or better is a success, under ten a failure, a natural one counts as two failures, and a natural twenty is not a save at all — they come back on a single hit point. Three successes and they are stable; three failures and a GM records it with **/gm kill**, or a healer argues with it first.

Any healing that lifts them above nought clears the tally, wherever it came from — a spell, a rest, or a GM's hand.

Saves, Skills and Initiative

A saving throw or a skill check rides on **/roll**: **/roll save:dex** or **/roll skill:stealth**. The ability modifier is added, and your proficiency bonus on top when your class has that save or you have taken that skill — the card says so when it applies. All eighteen skills offer a dropdown as you type.

`/roll save:con`	*(a Constitution save)*
`/roll skill:perception`	*(a Wisdom (Perception) check)*
`/roll skill:athletics mode:Advantage`	*(with advantage)*

Going first: on a 5e server you add your DEX **modifier**; on Knightfall you add the whole DEX score — the same command, the right arithmetic for the rules in force.

Weapons

Set what a weapon rolls with **/dnd weapondice slot:1 dice:1d12**, and an attack uses it for damage instead of the default 1d8. Clear it and it falls back.

Conditions, and Being Hard to Kill

All fifteen SRD conditions are known. **/dnd condition add:prone** takes one on, **remove:** lifts it, **clear:true** lifts them all, and a GM can name a **user:** or an **npc:**. They bend the dice on their own — a prone creature rolls at disadvantage and is easier to hit, an invisible one the reverse — and one of each cancels out, as the rules say.

At nought hit points a character is dying, not dead. **/dnd deathsave** rolls a d20 — ten or more is a success, under ten a failure, a natural one counts as two failures, and a natural twenty brings them back on a single hit point. Three either way settles it, and any healing above nought clears the tally.

`/dnd deathsave`	*(roll while dying)*
`/dnd temphp amount:8`	*(temporary hit points — spent first, never stacked)*
`/dnd inspiration grant:true`	*(a GM granting it)*
`/dnd inspiration use:true`	*(spending it for advantage)*

Damage types are honoured where a sheet declares them: write **fire, immune poison, x2 acid** and a blow is halved, spared or doubled, and the card says which it did. Temporary hit points are spent before real ones.

Extra Attack

A Fighter swings twice from fifth level, three times from eleventh and four from twentieth; a Barbarian, Paladin, Ranger or Monk swings twice from fifth. The turn is held until the action is spent, and the card says which swing you are on.

Magic

A caster's slots follow from their class and level, so the bot works them out. **/spell slots** shows what is left, with a filled circle for a slot in hand and an empty one for a slot spent, along with the spell save DC (8 + proficiency + the casting ability) and the spell attack bonus.

`/spell slots`	*(what magic you have left today)*
`/spell cast level:3 name:Fireball`	*(spend a third-level slot)*
`/spell cast level:1 name:Bless concentration:true`	*(and hold it together)*
`/spell concentration`	*(what you are holding)*
`/spell concentration drop:true`	*(let it go)*

Three patterns are known. **Full casters** — Bard, Cleric, Druid, Sorcerer, Wizard — read the usual table. **Half casters** — Paladin and Ranger — come in at second level and read it at half theirs. A **Warlock's** pact magic is a handful of slots all at one level, and they return on a **short** rest rather than a long one.

Clerics, Druids, Wizards and Paladins prepare spells: the ability modifier plus their level, or half their level for a Paladin. **/spell prepare add:** readies one, **drop:** lets one go and **clear:true** starts again — the list is capped at what you may hold, and it tells you when it is full. A long rest returns every slot.

Concentration is tracked. Casting a second concentration spell lets the first go, and when a blow lands on a caster the card asks for the save: ***CON, DC 10 or half the damage taken, whichever is harder****.*

Saves and Skills

A saving throw means rolling a d20 and adding your modifier. If your class is good at that kind of save, you add your proficiency too. A skill check is the same, against a DC the GM sets. All eighteen SRD skills are known, each tied to its ability: Athletics to STR; Acrobatics, Sleight of Hand and Stealth to DEX; Arcana, History, Investigation, Nature and Religion to INT; Animal Handling, Insight, Medicine, Perception and Survival to WIS; Deception, Intimidation, Performance and Persuasion to CHA.

What is live today: the rules above are implemented, and a 5e server uses 5e abilities and hit points. Combat still resolves the Knightfall way until the fight engine is wired to attack-versus-AC — that work, a 5e character sheet, classes and levels, and spellcasting are each still to come.

Your Sheet and Your Thread

Reading & Sharing Your Sheet

/char create ... — *(see Making Your Character — builds the whole sheet)*

/char view show — **/char view show user:@Players**

/char export — **/char export format:Image**

/char export format:Parchment image
the sheet on parchment, in the scroll font — for display; Discord strips an image's weave on re-upload, so use the Parchment PDF or Text block to travel

/char export format:Parchment PDF
the same parchment as a PDF — the one file that survives Discord re-uploads, sheet woven after its EOF

/char export format:Career PDF
the career record as a native-text parchment PDF, career woven after its EOF — survives Discord and imports back through /char import

/char export format:Summary
the career record — rank, merits, renown, dice history, pack, quests, lore — over a paste-able [TTRPG SUMMARY] block

/char import
hand an exported sheet OR career block to this server — a Parchment PDF (the carrier that survives Discord), a pasted block, or bare for a paste box; a GM approves. Careers move merits and renown to the imported totals and add dice history, items and lore — sheet, rank, quests, tags untouched

/char submit — *(resend your sheet after a rejection)*

With sheet approval switched on, an export goes to the GMs first. Running **/char export** posts the sheet block into the approval channel with **Release to player** / **Decline** buttons; the player sees only a private note that it has been sent. When a GM releases it, the block arrives by DM — or back in the channel they exported from, if their DMs are closed. Exporting is not an edit: it never changes a sheet's approval state and never stops anyone rolling. Exporting again replaces the previous request, so the channel holds one live entry per player. GMs export straight away, for themselves and for anyone else, and on servers not using approvals nothing changes.

The Pages of a Sheet

Beyond the stat block, a character accumulates things worth keeping. Each page can be read for yourself or for someone else with **user:**.

/char view show full:true — *(the card and every page below, on one post)*

/char view inventory — *(what they are carrying)*

`/char view standing`	*(merit and renown, and where each came from)*
`/char view rollhistory`	*(every natural die this character has rolled)*
`/char view rollhistory sides:6`	*(the same for a different die)*
`/char lore`	*(write your lore and send it to the Game Masters)*
`/char view showlore`	*(read approved lore)*

Inventory holds roleplay items — things an activity handed over, or a Game Master gave out by hand with **/char give user:@Players item:A tarnished silver key**. Each carries a number, so **/char take user:@Players id:3** removes one. Giving and taking are Game Master-only.

Standing puts total merit and renown at the top, then lists every movement beneath it — the quest, activity or Game Master award that caused it, the amount, and how long ago. Merits are a lifetime tally that only climbs; renown is a currency that is spent again.

Roll history counts every natural die a character has ever rolled, drawn as a bar chart with the natural 20s and 1s marked. It follows the character, not the player, and covers every roll they make — typed, slash, in a fight or in an activity.

Lore opens a writing box, pre-filled with whatever you wrote last time. It goes to the same channel character sheets do, with Approve / Reject buttons; a rejection asks the Game Master why and passes the reason back. Only approved lore shows on **/char view showlore** — before that it says it is waiting, or why it was turned down. Rewriting retires the old request and sends a fresh one.

Nothing here is required. A character works perfectly well with an empty inventory, no lore and no renown — these are for tables that want to track more.

Your Thread

With a character forum set, every approved character gets a thread of their own there — the sheet first, then inventory, lore, standing, titles and associations as posts beneath it — kept current by the bot, so the sheet in your thread changes the moment a stat does. A button on the page asks a GM to update your lore document; everything else writes itself.

Your Roll Card

How much of your sheet appears when you roll is up to you.

`/char profile card style:Full`	*(the whole sheet)*
`/char profile card style:Compressed`	*(one line of stats)*
`/char profile card style:Off`	*(plain text rolls)*

Compressed puts everything on a single line under the roll — **STR 5 · CON 5 · DEX 4 · WIS 4 · LCK 2 · HP 8/8 · RR 2/2** — which keeps a busy channel readable without hiding where a modifier came from.

*A **stat roll always shows something**, even with your card Off: **1d20+4** says nothing about which stat it was or where the 4 came from, so those fall back to the compressed line. Choosing Compressed is respected rather than overridden — the bot never upgrades you to Full. Plain dice*

rolls honour Off completely.

Saved Sheets

`/char profile save slot:vault`	*(keep a copy of your sheet)*
`/char profile load slot:vault`	*(put it back)*
`/char profile saves`	*(what you have saved)*

Loading a save is checked like any other change — an old snapshot cannot smuggle in a spread that breaks the current point allowance.

Profile

`/char profile on`	*(enable embed, max HP + rerolls)*
`/char profile off`	*(disable embed, plain text rolls)*
`/char profile show`	*(preview card without rolling)*

Sheet Import

Paste an exported sheet into any channel the bot watches.

`[paste sheet into channel]`	*(your own exported sheet, back onto this server)*

Heroes

Hero is a **status**, not a class. A Game Master grants it, and it sits alongside whatever class and knight order a character already holds — a Hero can be a Green Knight Vanguard.

`/char hero user:@Players value:true`	*(Game Master grants it)*
`/char hero user:@Players value:false`	*(and takes it away)*
`/char signature user:@Players stat:Strength`	*(a Hero rolls that stat with advantage)*

It used to occupy the class slot, so a Hero could be nothing else. Anyone whose class said Hero has been moved across automatically and their class slot freed. Removing Hero status clears the signature stat with it.

Quests

GMs create quests with lore, objectives, details and rewards. Quests are posted as a message with an Apply button and also appear on the board. Players apply, a Game Master approves the party, and on completion merits are auto-awarded while other rewards are listed for the Game Master to hand out.

For Players

`/quest board`	*(list quests (filter: open/active/completed/all))*
`/quest show number:1`	*(full details of one quest)*
`/quest roster number:1`	*(see applicants and the party)*
`/quest party apply number:1`	*(apply to join — or tap Apply on the post)*
`/quest party withdraw number:1`	*(leave or cancel your application)*
`/quest record user:@Players`	*(one player's finished quests — what they have been on)*

Quests are auto-numbered for easy recall, e.g. ***#001-Hollow Cave*** *(repeatable quests keep the name and get a fresh number each time). Party size is a hard cap or a suggestion — the Game Master chooses with* ***hard_cap****, and* ***force:true*** *on approve overrides a cap. Point a quest at a thread with* ***/quest runchannel*** *and its completion rewards are announced there.*

Your Party's Thread

When a run starts it opens its own thread in **quest-instances** with the whole party pulled in. That thread is where the quest happens: fights fought there log themselves on the quest's timeline, the Game Master's rally pings everyone in it, and the ending is written up there before it goes anywhere else. A player holds one seat at a time — you cannot be approved onto a second quest while a run is still live.

Encounters

An encounter is a session on the fly — no board, no applications. The Game Master names it, ticks who is in it from the roster and opens it; it gets a thread of its own in quest-instances like any run, and pays out like one. The seats are the Game Master's: there is no Join button, so if you want in, ask. An encounter does not count as your one quest, so a party already out on a quest can still be jumped by bandits.

`/encounter list`	*(every encounter running now, and where)*

Campaigns

A campaign is the long arc — quests and encounters under one name. Its card shows the premise, what is done and your own part in it; the Game Master's notes and status stay on their side.

`/campaign list`	*(every campaign on the server)*
`/campaign show campaign:The Falconer's War`	*(the premise, what is done, and your part)*

The Chronicle and the Review

When a run is completed, the Game Master's telling of it lands in your own thread in **quest-chronicle** — one thread per adventurer, every quest they finished, told by whoever ran it — and the summary is linked on your standing page. The run's thread then carries a review button: a score out of five and a line or two, for the Game Masters alone to read.

/quest record lists what you have been on.

Standing

A milestone-style progression system. Merits are a lifetime tally a Game Master awards; ranks are named tiers with merit thresholds. The bot tracks progress and flags eligibility, but every promotion is decided by a Game Master.

Merits

`/standing merit view`	*(your merits, rank, and merits to next rank)*
`/standing merit view user:@Players`	*(view another player)*
`/standing merit leaderboard`	*(top earners on the server)*
`/standing merit history user:@Players`	*(a player's merit timeline)*
`/standing merit history`	*(recent server-wide merit activity)*

Ranks

`/standing rank list`	*(all ranks and their thresholds)*

***/standing merit view** shows current merits and exactly how many more are needed for the next rank, e.g. "Knight · 7 merits · 8 to Paladin". Every merit change is recorded — quest rewards show the quest name, manual changes show "by GM" — so **/standing merit history** answers "who earned what, and when". Removing a rank doesn't change players who already hold its label.*

Titles & Associations

A title is a name earned — granted by a Game Master, or carried away by every survivor of a quest that offered one, stamped with where it came from. An association is a company, order or cause a character stands with. Both show on the character's page.

`/standing title list user:@Players`	*(the titles they hold)*
`/standing association list group:The Falconers`	*(who stands with a company)*

Renown

Renown is not a currency. It is a running tally of how a character **stands in the world** — what they have done, who has noticed, and how far their name carries. It is earned from quests, encounters and activities, and it is not meant to be traded away for goods. Someone with high renown is **known**; that is the whole of it.

A Game Master can adjust it either way when the story calls for it — a reputation can be damaged as well as built — but it is a record of standing rather than a purse.

`/standing renown view` `/standing renown view user:@Players`	
`/standing renown leaderboard`	*(who is best known)*
`/standing renown history`	*(where a standing came from)*

`/standing renown gain user:@Players amount:5 reason:Cleared the Sunken Vault`	*(Game Master)*
`/standing renown loss user:@Players amount:3 reason:Disgraced at court`	*(Game Master)*
`/standing renown set user:@Players amount:0`	*(Game Master)*

Every change is logged with its reason, so **/standing renown history** answers how a reputation was built and where it was lost.

Merit

Merit is the earned measure of service — awarded by a Game Master, accumulated across quests and activities, and the thing rank thresholds are set against. Unlike renown, **merit is tradeable**: it can be passed between players, and potentially to and from NPCs, as payment, tribute, a debt settled or a favour bought.

`/standing merit give user:@Players amount:2 reason:A debt settled`	*(offer some of your merit)*
`/standing merit trades`	*(what is still waiting on a Game Master)*
`/standing merit cancel id:3`	*(withdraw one — your own, or any as a Game Master)*

No merit moves until a Game Master signs it off. An offer is held and posted to the sheet approval channel with Approve / Refuse buttons; a refusal asks the Game Master why and passes the reason back. Both parties are told when it lands, and it is announced in the channel where it was offered so the table sees the trade happen.

Your balance is checked twice — when you offer, and again when a Game Master approves. If you have spent the merit in between, the trade is voided rather than pushing anyone into the red.

Renown says who you are in the world. Merit is what you have earned and may hand on. A character can be widely known and hold no merit at all, or quietly hold a great deal.

Activities and Quizzes

An activity is a minigame you write for your server: the bot narrates, asks for rolls, branches on the results and loops until someone stops. Fishing, foraging, a gauntlet in the training yard — whatever you script. Only a Game Master can write one; whether players can **start** one is a setting.

Running One

`/activity run name:Fishing [player:@Players]`

start an activity here. Name a player and it runs for THEM — their name on it, their buttons, their score — which is how you set a quiz for someone to sit (GM only). Several runs can go at once in one channel; each answers only to its own player

`/activity list` `/activity show name:Fishing`	*(what exists, and read it back in full)*
`/activity stop`	*(abandon the run here)*

`/activity demo which:Kalidale Lore [player:@Players]`
play a built-in activity — the fishing tale or a five-question lore quiz. Name a player and it runs for THEM, so you can hand someone a quiz to sit; nothing is awarded either way

/activity demo plays a ready-made fishing game so you can see the whole system working before writing anything: a difficulty check that loops with a different excuse each time, four sizes of catch chosen by the roll, a gauntlet per size, natural 20s and 1s, and buttons to keep going or head back. It awards **nothing** — no renown, no merits, no items — so it is safe to play with.

One Run Each

An activity run belongs to the person who started it. Several people can play in the same channel at once, each with their own prompts, their own progress and their own rewards — and one person stopping or wandering off does nothing to anyone else. Every post is tagged with whose run it is, and a button only answers for its owner.

`/activity run name:Fishing`	*(start your own run)*
`/activity stop`	*(end yours — a Game Master with none running can clear the channel)*

Answering a Scene

Press the button, or **type the stat and add your own flavour after it** — both roll the same thing, but typing lets you say what your character is doing.

`wis I survey the reeds where the current slows`	*(rolls WIS, prints your words)*

A typed roll only answers the scene if the stat is one that step accepts; anything else falls through to an ordinary roll, untouched. Your stats are shown alongside the result either way.

A Second Chance

After a roll the tale **waits** rather than moving straight on. If you have a reroll to spend you are offered one, alongside a **Carry on** button:

`Reroll (2 left)`	*(spend one and roll again)*
`▶ Carry on`	*(take the result and continue)*

Only one reroll is offered per roll — the second result stands, and the tale moves on. If you have none left, or the scene was an ending, it continues as before without stopping to ask. Your progress is saved while it waits, so nothing is lost if you take a moment to decide.

*In **/activity demo** the reroll is **free** and always offered, even with none left — a dry run should not quietly cost a player their real rerolls just to see what the button does.*

Each scene posts with a button per stat it accepts. A press rolls with the presser's own sheet, honours a Hero's signature stat, and lands in the roll audit like any other roll. Writing and deleting always need a Game Master; starting one is GM-only until **/config mechanics activities players:true**.

Quizzes

A quiz is an activity a Game Master sets from the question bank: a question, then a button per answer — or a box to type into — marked right or wrong on the spot, with the explanation after, and a score at the end. The bank prefers questions you have never been asked, so a second sitting is a different quiz.

◈

What the Stats Do

`/char stat`	*(what each stat is for, in plain words)*

How Rosters Are Ordered

Every list of characters reads the same way: **Heroes first** as their own group, then by **knight order**, then by **class**, then alphabetically. Characters with no order or no class sort after those that have one, rather than jumping the queue.

***NPCs sit below the players**, however senior their order — the two are separate halves of a list rather than interleaved. Within the NPC half the same ordering applies. Mixed lists like **/gm heal global:Everyone** print each group under its own heading.*

Telling the GMs Something

`/feedback send`
tell the GMs what you think — pick a room, score it 1–10, say your piece; they see who wrote it, no one else sees it happened

`/feedback send room:General quest:…`
name the room to go straight to the form (blank opens a menu); name a run you were on or ran and the GMs' card says which one
