Start Here

DDice runs the table. It rolls the dice, keeps every character sheet, runs fights turn by turn, posts quests, pays merits and remembers what happened. You talk to it in two ways. **Slash commands** begin with **/** and Discord shows every option as you type — **/roll stat:Strength** is the command **/roll** with its **stat** option filled in. **Typed shorthands** are plain messages the bot watches for — **1d20**, **str**, **hp +2** — for the things you do fifty times a night.

How to Read This Book

Commands are shown as you would type them. **@Players** stands for a player picked from the list Discord offers and **@GMs** for a Game Master (or the GM role); where an example needs real names, **Artorius**, **Meliora** and **Zeus** stand in. **name:**, **number:** and the like are options — type the label, then your answer. Where a line reads **(GM)**, only a Game Master can run it. The chapters follow the order you will meet things: rolling first, then your character, then fights, quests and standing.

`/help`	*(overview of all command groups)*
`/help category:start`	*(the new-player guide — the whole game in one page)*
`/help category:dice`	*(detail on a specific group)*
`/help category:rules`	*(the live table rules as the bot enforces them — the same words the books use, readable by everyone)*

*Anywhere a command asks for something that already exists — an NPC, a quest, a weapon, a tag, an activity and its scenes, a category, a recovery schedule, an item someone is carrying, a title, a group, a spell, a saved sheet, a rest amount — a **dropdown appears as you type**, and you can still type past it freely. Where a new name is the point (create, add, save) what you typed leads the list.*

Where the News Lands

A forum called **updates** carries one dated thread for every change the bot has had — titled by the day it landed, newest at the top — and every entry the bot has ever announced is there from the first. When something in this book looks different from what the bot does, the updates forum says what changed and when.

Setting Up

Everything the bot needs can be made in one command, and everything it made can be inspected and repaired in another. Two categories come into being: **DDice**, open to the table, and **DDice · Game Masters**, shut to everyone else. Nothing already set is touched, and a channel merely named for a job is taken up rather than doubled, so it is safe on a server set up by hand.

The One-Command Setup

`/gm check build`
the one-command setup: makes every channel and forum the bot needs in the two categories, points the config at each, then fills them with the audit shelves, pipeline books and tags. Needs Manage Channels, for you and for the bot (GM)

`(pickers)`
the check report offers channel pickers for unset configs — up to five at a time; a pick runs the real config branch, tags and books included (Manage Server required)

`/gm check run`
build anything missing — audit shelves, pipeline books, pipeline tags — and sweep every channel's permissions, repairing what it can; never moves or renames anything, and names what only you can grant. Surviving threads are adopted by id, never remade, so run it as often as you like, and after any update that adds a book. Trims the ledgers that only grow — /rp ownership past ninety days, the week's dice past fourteen — as every boot does (GM)

`/gm check status`
which channels are set, which await; the last line says whether the slash commands registered on this boot, and the Deploy mend says the same

`/gm bar`
pin a GM toolbar in this channel: Plant target, Call check, Start fight, Status, Undo — each opens the box its command would (a target by name, DC and stats, scene, hits, who may swing; the check window; players and NPCs for a fight). Status is the channel at a glance: the fight and everyone's HP, the targets standing, what waits on a GM. Undo is /gm undo

`/gm check restart` — *(DELETE the whole setup and build it fresh — asks first, and the threads inside do not come back (GM))*

`/gm check order` — *(sidebar diagnostic — asks first: apply the plan order, or keep your layout and just report (GM))*

What Gets Made

Channel	What it is for
quest-board · forum	The board: a thread per posted quest.
quest-instances · forum	Each started quest opens its own instance here, for its party.
quest-chronicle · forum	A thread per adventurer — every quest they finished, told by the GM who ran it.

Channel	What it is for
character-pages · forum	A page for each approved character.
the-fallen · channel	Those who did not come back, remembered by the table.
updates · forum	What changed for players — one dated thread per update.
player-pdf · channel	The player book alone, reposted whenever it changes.
approvals · forum · GM	A thread apiece for sheets, trades, duels, lore and exports — each waiting on a GM.
roll-audit · forum · GM	A shelf per subject: rolls, checks, duels, items and the rest.
npc-pages · forum · GM	A thread per category, every NPC in it an entry inside — filter the sidebar to sort them.
npc-portraits · forum · GM	A thread per category, mirroring npc-pages. Caption an NPC's exact name for their face, or a bare order or category name for a shared one.
quest-planning · forum · GM	The pipeline books — concept, awaiting, approved, in progress, DMs, archived, completed.
quest-threads · forum · GM	A planning thread per quest, so the books keep the planning forum to themselves.
gm-quest-log · channel · GM	The machine's account of every finished quest — timings, events, payouts, final words.
gm-run-archive · forum · GM	A thread per GM, a post per finished run: its runtime, party, payout, the record, the story, both transcripts.
gm-updates · forum · GM	What changed for GMs, and what each deploy mended — one dated thread each.
gm-digest · forum · GM	The weekly digest of what is waiting on a GM — one thread per week, titled by its Monday.
gm-feedback · forum · GM	Player feedback, one thread per category; players post with /feedback send.
gm-character-sheets · forum · GM	GM characters — the same five blocks and tags as the player forum, behind the GM category's eyes only.
campaigns · forum · GM	One thread per campaign — the arc, its linked runs, and where things stand.
question-bank · forum · GM	The quiz bank, a thread per category.

Channel	What it is for
scroll-archive · forum · GM	Every prop written, kept.
memorial · channel · GM	The full record of a death — cause, deeds and standing.
backups · channel · GM	Where the nightly backup of everything is posted.
command-reference · channel · GM	The command books, reposted whenever they change.

GM Roles

`/config mechanics gmrole role:@GMs`	*(add a GM role — several can be set)*
`/config mechanics gmrole role:@GMs remove:true`	*(remove one)*
`/config mechanics gmrole role:@GMs replace:true`	*(make it the only GM role)*
`/config mechanics gmrole`	*(list current GM roles)*

*Several GM roles can be set at once — holding any of them grants GM access. Anyone with the Discord **Manage Server** permission always counts as a GM, so you can never lock yourself out by mis-setting a role.*

Mechanics

`/config channels ruleset system:knightfall`

which rules this server plays by — Knightfall (five stats, blows decided by opposed rolls) or D&D 5e by the SRD (six abilities as modifiers, proficiency growing with level, attacks rolled against Armour Class). Set it BEFORE anyone makes a character: it refuses to change once sheets exist, because a sheet written for one system cannot be read as another. Run it bare to see which rules are in force

`/config mechanics statallowance points:15 minimum:1`	*(player build points (omit both to view))*
`/config mechanics hpbase base:3`	*(max HP = CON + this (default 2))*
`/config mechanics heal charges:3`	*(max heal charges for White Knights)*
`/config mechanics rest type:Short Rest hp:50% rerolls:0%`	*(% of max)*
`/config mechanics rest type:Short Rest hp:3 rerolls:1`	*(flat numbers)*

*Rest amounts come in two shapes, and the difference matters. A bare value **sets** the resource: **50%** puts them on half their maximum, **4** puts them on exactly 4 — even if that is fewer than they had. Prefix a **+** and it **adds** instead: **+4** gives four more HP, **+25%** gives a quarter of their maximum on top of what they have. Both cap at the maximum and both round down. **0%** leaves that resource untouched, and only the values you provide change.*

Rolling Dice

Type dice notation directly or use any prefix style (r, !r, !roll):

`1d20` — *(bare notation — no prefix needed)*

`r1d20+5`

`r1d20+5 atk` — *(label shows in bold above result)*

`r1d20+5 atk` — *(supports *italic* and **bold**)*
`[flavour text on next line]`

Advantage & Disadvantage

`ra1d20+5` — *(rolls twice, takes higher)*

`rd1d20+5` — *(rolls twice, takes lower)*

`ra2d6`
several dice: the whole set rolled twice, the better total kept — both sets shown, the other struck through

`rd3d4` — *(the same, the worse total kept)*

A mark the Game Master leaves on you — advantage or disadvantage on your next roll — is spent by whatever you roll next, dice as well as a stat, and on several dice it works the same way.

Advantage Waits on a Game Master

Advantage or disadvantage you pick yourself — **ra**, **wisa**, **/roll mode:Advantage**, a fight's **roll:adv** — is not rolled at once. A card goes up in the channel naming you and the command, and pings the Game Masters with **Allow** and **Deny**. Allowed, you are pinged with a **Roll** button only you can press, good for ten minutes, and the roll goes ahead exactly as you asked it. Denied, it rolls plain at once. Nobody answering in five minutes is a no, and you are told so — roll it again plain. One roll waits at a time in a channel.

Never held: a Game Master's own rolls, and advantage the bot or a Game Master gives you — a mark, a Hero's signature, a condition, a check a Game Master calls, a scene that tilts the dice. A server may switch the hold off.

Guided Roll (/roll)

`/roll` — *(bare: a flat 1d20 — no stat, no modifier)*

`/roll stat:Strength` — *(pick a stat from the dropdown)*

`/roll stat:Wisdom mode:Advantage` — *(advantage / disadvantage)*

`/roll dice:2d6+3 label:damage` — *(custom notation instead of a stat)*

`/roll stat:Dexterity success_check:true label:sneak flavour:*slips into shadow*` — *(label + RP text)*

`/roll last:true` — *(recall your last roll in this channel)*

Every part of **/roll** is a dropdown or field — stat, advantage, success check, label and RP flavour — so nothing has to be memorised. Choose either a **stat** (rolls 1d20 + that stat from your sheet) or custom **dice**. The result uses the same card as a typed roll.

Stat Quick Rolls

`str` `con` `dex` `wis` `lck`	*(on their own — nothing else in the message)*
`strength` `constitution` `dexterity`	*(long names roll exactly the same)*
`wisdom` `luck`	
`wisa` `dexd`	*(advantage / disadvantage · a label may follow)*
`r str atk`	*(a plain stat roll with a label)*
`?str atk`	*(the same, as a success check)*

Rolls 1d20 + that stat from your saved character. Add **a** for advantage or **d** for disadvantage — **wisa**, **dexd**. Every stat answers to its **full name** as well as its short one, and they behave identically: **strength** is **str**, **wisdoma** is **wisa**, **luckrra** is **lckrra**.

A stat roll **always shows your sheet** — stats, HP, rerolls and all — even with the profile embed switched off. A bare **1d20+4** tells nobody which stat it was or where the 4 came from, so the card is forced open where the numbers need explaining. Plain dice rolls still honour **/char profile off**.

A plain stat name must be the whole message. str, **con**, **dex**, **wis** and **lck** are ordinary words in conversation, so anything typed after one means it is treated as chat and left alone — “Dex or strength can both be used to throw things” is a sentence, not a roll. To label a plain stat roll, put a prefix on it: **r str atk** or **?str atk**.

Forms that cannot be mistaken for words keep their labels as they always did — **wisa sneak**, **dexd guard**, **strrr atk**, **conrra hold the line**.

? Success Check Rolls

Prefix **?** instead of **r** to get a success outcome:

```
?1d20+5   ?ra1d20+5   ?rd1d20+5   ?rr   ?str
?wisa
```

Result	Outcome
Natural 20 / max face	Critical Success (gold)
Natural 1 / min face	Critical Fail (red)
Total 15+	Success
Total 10–14	Partial Success
Total 2–9	Fail

The same holds for every check against a DC — a Game Master’s called check, a planted button, a group check, a target: a natural 20 passes and a natural 1 fails, whatever the total. A natural 20 on a target beats it outright.

Targets

A target is something the Game Master plants in the channel for the party to swing at — a door, a barricade, a Hollow with no sheet. Its card carries the buttons: one for each stat the Game Master allows, all five when they named none, so you pick the stat you swing with. Pressing opens a short form — what you do, what you say, both optional — and your words land above the roll. A natural 20 beats the target outright (*Roll critically succeeds*) and a natural 1 fails (*Roll critically fails*); anything else reads *The roll succeeds* or *The roll fails* and is the Game Master's call — *The player passes the check — Roll succeeds*, or *fails* — with their words on what happens beneath. A target can take several hits: the card says how many are left, and with a DC set a roll that meets it takes one off with no call. When a swing fails, the card comes back at the bottom of the channel with its buttons, counting its returns, ready for the next.

Critical Hits & Fails (all rolls)

Natural max on any die → gold label + result.
Natural 1 on any die → red label + result.

One Reroll Per Roll

A roll can be rerolled **once**. Whatever the second attempt says, it stands — you cannot keep spending rerolls on the same roll until the dice agree with you. This holds everywhere: typed rerolls, **/fight rr**, and the prompt inside an activity.

In a fight each side of an exchange gets its own second chance, so an attacker rerolling does not use up the defender's. A fresh exchange resets both.

Rerolls are still a resource — this is a limit on top of having one to spend, not instead of it.

Rerolls

`rr`	*(costs 1 token)*
`rra`	*(reroll with advantage)*
`rrd`	*(reroll with disadvantage)*

Shorthand: append a reroll set to a stat — **strrr**, **dexrra** (adv), **conrrd** (dis) — to reroll your last roll. A label may follow: **strrr atk**.

Game Master Rolls

`/gm roll notation:1d20+5`	*(public roll in channel)*
`/gm roll notation:1d20+5 label:perception`	*(with label)*
`/gm roll notation:1d20+5 secret:true`	*(secret — only you see the result; the roll audit records it either way)*
`gmr 1d20+5 perception`	*(typed chat shortcut for the same roll)*
`gmrs 1d20+5 stealth`	*(typed shortcut, secret — sent to your DMs)*

Calling for a Check

/gm dc dc:14 stat:dex targets:@Artorius @Meliora npcs:Hollow tank

call a check. Players get a roll button each — a press rolls their own d20 (+stat, signature honoured) vs the DC and lands in the audit; named NPCs roll instantly on the card. dice: swaps the stat for any notation (2d6+1); mode: sets how they roll it — advantage, disadvantage, or a bare d20 (no stat, no signature); modifier: adjusts totals ±20; secret:true hides the DC (you get it privately) and reveal:@Players whispers it to chosen players when they press — per-player sight on one check; on_fail: and on_success: each mark their NEXT roll — advantage or disadvantage — and the mark is GENERAL: it rides the character, needs no fight to be set, and is spent by whatever they roll next, anywhere — a chat !r, /roll, an activity, any fight action, or another check (specialist abilities keep their chosen mode). flat stays a fight mark: their next fight action as a bare d20. fail_damage: and success_damage: cost HP on that outcome, sheet and fight kept in sync. Nat 20 always passes, nat 1 always fails; pressed buttons go dark. Works mid-fight and with /fight auto npconly — full-auto runs start to finish, so a check lands after it. success_flavour: and fail_flavour: stay hidden on the card and are revealed with each roller's result; success_sanction: and fail_sanction: shift a stat by decree (pattern dex-1 or lck+2, ±5 at most, floor 0) — the stakes show on the card, the words wait for the outcome

/gm dc target:@Players npcs:Hollow tank

leave dc: out and a WRITING WINDOW opens — the check as a form: the scene · the check line (e.g. "dex 14 hidden", or "2d6+1 8 bare adv -2") · on success · on failure · targets. Each outcome box takes a tag line first — [adv] [dis] [bare] [dex-1] [-3hp], any order, either outcome — then the words the players read. Targets picked on the command carry into the form; the last box adds any you missed. Naming dc: keeps the fast path with every option instead

/gm dc dc:13 stat:stealth targets:@Artorius

on a 5e server stat: is any of the six abilities or eighteen skills, and save:true makes it a saving throw; proficiency is added where the sheet has it. The window reads stealth 14, dex save 13, sleight of hand 11, and a sanction is a 5e score: [cha+1], kept 1–30

/gm dc … hold:true skipfail:true

bind the check to the fight: the target's actions wait on the card, and a failed check passes their turn

Buttons and Targets

/button roll dice:2d6+1 dc:9 reason:… for:@Players once:true

plant a roll: dice OR a stat, an optional DC, the reason shown above it, and who it is for — anyone if left open. audience:@Artorius @Meliora @GMs addresses several players and/or a role: only they may press, and the card names them all. Pressed inside a quest, it joins that quest's timeline and the GM log (GM)

/button group stat:wis dc:12 reason:…

one check the whole party rolls — each presses once, the message keeps the tally, and Call it closes the scene with how many got through. A natural 20 passes and a natural 1 fails, whatever the total (GM)

/target create name:Barricade [dc:12] [stat:Flat d20, STR, DEX] [dice:2d6+1] [hp:3] [for:@Players] [audience:@Artorius @Meliora @GMs] [success_flavour:…] [fail_flavour:…] [write:true]

plant something to swing at — no sheet, no roster. for: addresses one player, audience: several and/or a role — only they may swing, and the card names them. hp: is the hits it takes: with a DC a roll that meets it takes one off with no call, with no DC each pass you call does; it falls at 0. write:true opens a box for the scene and the two flavours. A d20 unless dice: says otherwise; stat: lists as few or as many stats as you like, one button each in that order — leave it out and all five are buttons; leave dc: out and every blow is your call. A press opens a short form — what they do, what they say, both optional — and the words land above the roll. A natural 20 beats it (Roll critically succeeds) and a natural 1 fails (Roll critically fails) on their own, posting your flavour if set; anything else says The roll succeeds / fails and asks YOU — the player passes the check, or fails it — each opening a What happens? form prefilled with your flavour (blank still sends the verdict). A fail posts the card again below with its buttons and a counter; secret:true asks in the GM channel and tells the players Roll succeeds / fails in theirs (GM)

/target list

what still stands in this channel, with a Retire button per target to take it down without a swing (GM)

Overrides

/gm undo [steps:1-10]

rewind the last step in this channel: a fight exchange (attack, defence, Resolve, a reroll, an action), a target strike or verdict, a group roll, a once-only press, a called check that cost HP — and the HP, rerolls, marks and stats those changed on sheets and NPCs. The table sees what was rewound and what moved; a fight gets its status and whose move it is posted again. Ten steps per channel, a day at most; a fight that has ended is not rewound; the rewind is never a step itself, so two undos are two steps back. Audited and noted on the quest (GM)

/gm override skip [reason:] — *(pass the current turn in this channel's fight — announced as a GM ruling)*

/gm override interject user:@Players amount:2 note:…

bend a player's roll mid-fight, any combination: force their stat, adjust the total (±10, stacks), set advantage/dis/flat, or DECLARE THE DIE (1–20) — the one lever that rewrites a roll already cast; the total recomputes around their modifier and every automatic honors the declared face; announced, audited (GM)

/gm override condition user:@Players text:poisoned turns:3

a word the table agreed on and, if you like, a clock: shown on their turn line, counting down when their turn comes round, lifting at 0 with a line. Leave turns: off for one that lasts until clear:true. npc:Name for an NPC. No mechanics ride on it (GM)

/gm reroll target:@Players stat:dex mode:dis flat:true

interrupt and correct a mistaken roll by decree — wrong stat, wrong footing, or a bonus they never had. If they hold the pending attack or defence in a live fight here, the corrected roll REPLACES it in the fight (resolve sees the new number); otherwise their last roll in this channel is rerolled on the corrected terms. flat:true forces a bare d20; signature advantage is honoured unless flat; carried riposte/fumble modifiers drop — the GM is re-declaring the terms. NO reroll token is spent and the player's own once-per-roll right stays untouched. Mirrors to the audit as a GM correction

The Roll Audit

`/config channels rollaudit channel:#gm-rolls`	*(mirror every roll — raw input, result and jump link)*
`/config channels rollaudit test:true`	*(send a test mirror, report problems)*

`/config channels rollauditforum forum:#roll-audit`
split the mirror into books — player rolls, GM rolls, NPC rolls, NPC say, and the Scrolls archive; rerunning adds any missing book

`(the books)`
the audit forum keeps a shelf per subject: Player Rolls · GM Rolls · NPC Rolls · NPC Say · Scrolls · Called Checks · GM Overrides · Duels · Advancement · The Fallen · Items. Re-run the setup after an update and any new shelf is added without touching the old ones

`/config channels rollauditforum disable:true`	*(back to the single audit channel)*

The roll-audit mirror records every roll, in every channel, with nothing skipped. *Prefix rolls, stat shorthand, success checks, rerolls, heals,* ***/roll****,* ***/gm roll*** *and every fight roll — plus Game Master rolls, including secret* ***gmrs*** *ones, so Game Masters are accountable to one another.*

A Game Master rolling as an NPC with ***/npc roll*** *is logged under their own name, tagged with the NPC they spoke as — the roll itself goes out through the NPC's webhook, so the audit is the only place it ties back to a person.*

Rolls the bot makes for itself are recorded too, attributed to the fighter and tagged ***auto****: auto-pilot attacks, defences and reroll answers, initiative at the start of every fight and whenever an NPC joins mid-fight, every roll of a full* ***/fight auto****, and demo bouts. Rolls typed inside the audit channel itself are mirrored as well — a secret* ***gmrs*** *there goes to the Game Master's DMs, so without the mirror it would leave no record at all.*

Use ***/config channels rollaudit test:true*** *to check it works. Set the channel's Discord permissions so only Game Masters can view it. When NPC stats are hidden, manual and auto fight cards mask the stat and modifier — the audit's NPC book keeps the full card — roll line, real HP and all five stats revealed.*

◈

Characters and Approvals

Make Your Character

Build your character with /char create. One command sets the whole sheet at once — every stat, your order, your class and both weapons — so it arrives complete instead of in pieces.

`/char create str:14 con:12 dex:10 wis:5 lck:3 \`
`  order:White Knight class:Vanguard \`
`  weapon1:Longsword weapon2:Tower Shield`
	(the whole character, one command)

Every option is optional — fill in what you have decided and run it again later to add the rest. The values for **order**, **class** and the weapon fields are listed further down this chapter.

This matters most where a GM has switched sheet approval on. /char create sends one request for the whole character; building the same sheet a field at a time sends a fresh request on every single change and buries the GMs in them. It matters again afterwards, because once your sheet

is approved every field is locked and only a GM can change it — so /char create is your one clean run at the character you want.

The Point Budget

A player building their own character spends **exactly 15 points** across the five stats, and every stat needs **at least 1**. Not 14, not 16 — the full allowance, all of it placed. A Game Master can change both numbers for the server with **/config mechanics statallowance**.

```
/char create str:5 con:4 dex:3 wis:2 lck:1          (15 exactly, nothing on zero — fine)
/char create str:4 con:4 dex:3 wis:2 lck:1          (14 — refused, 1 still to place)
/char create str:6 con:5 dex:3 wis:2 lck:1          (17 — refused, take 2 back off)
/char create str:9 con:5 dex:1 wis:0 lck:0          (over AND stats on 0 — both reported)
```

A sheet also has to be **finished** before it can go to a Game Master: both weapons named, and an emoji chosen for each with **/char weaponemoji**. A weapon emoji has a default, so picking one is what counts — leaving it be is not the same as choosing it. Weapons can be set on **/char create** in the same breath as your stats.

```
/char create str:5 con:4 dex:3 wis:2 lck:1 \        (stats and weapons at once)
  weapon1:Gunlance weapon2:Rifle
/char weaponemoji slot:Weapon 1 emoji:[choose]      (then an emoji for each)
/char weaponemoji slot:Weapon 2 emoji:[choose]
```

The refusal is posted **in the channel you are working in**, not as a private note only you can see — so it sits alongside what you typed. A copy also goes to the **approval channel** with a jump link back to the attempt, so the Game Masters can see who is wrestling with the budget and step in without having to be in that channel. Nothing is submitted either way.

Break a rule and the sheet is refused on the spot with a note saying exactly what is wrong — both problems at once if you managed both — along with your current spread and running total, so you can see what to move. Nothing is saved and nothing goes to the GMs until it is legal. The same check runs on **/char set**, on a pasted sheet, on **/char profile load** and on **/char submit**, so there is no way in around the back.

Adjusting one stat at a time with **/char set** only checks the ceiling, so you can shuffle points between stats freely — lowering one before raising another would be impossible otherwise. The sheet is saved either way, but it is held back from the Game Masters until the full allowance is placed, and it tells you how many points are still loose.

Game Masters are not limited by any of this — building a character for a player, adjusting one, or making their own. A Game Master can hand out whatever spread a story calls for, and NPCs are unaffected entirely.

Changing One Field Later

Use **/char set** to adjust a single thing after the fact — a stat that went up, a weapon you swapped. It is a touch-up tool, not the way to build a character from nothing. Pick the **field** first: **value** then offers what fits it — the orders, the classes, the weapon list, the weapon emojis.

`/char set field:str value:14`	*(one field at a time)*
`/char set field:con value:12`	*(HP auto-maxes to CON + 2)*
`/char set field:lck value:3`	*(rerolls auto-max to LCK)*
`/char set field:str value:14 user:@Players`	*(Game Master only)*

Knight Orders

These are the values to pass to **order:** on /char create — or to /char set if this is the only thing you are changing.

`/char set field:order value:White Knight`	*(also: Black, Gold, Grey, Blue,)*
`/char set field:order value:Red Knight`	*(Purple, Green, Red)*

Class, Weapons & Emojis

`/char set field:class value:Vanguard`	*(Vanguard / Defender / Siege Knight — Hero is a status a GM grants)*
`/char set field:weapon1 value:Longsword`	
`/char weaponemoji slot:Weapon 1 emoji:[choose]`	*(standard emoji dropdown)*
`/char weaponemoji slot:Weapon 1 custom::sword:`	*(paste a server emoji)*

Pick a standard emoji from the dropdown, or paste a server custom emoji in the "custom" field (it overrides the dropdown). The image export falls back to a sword glyph for custom emojis.

Is My Sheet Ready?

Rather than finding out one refusal at a time, ask.

`/char check`	*(the whole checklist at once)*

It shows your stats against the point allowance and how far off you are, whether both weapons are named, whether both emojis are chosen, and then whether the sheet is ready to send, already with a Game Master, or approved.

If a GM Sends It Back

If a GM **rejects** your sheet you can fix it and try again yourself — change whatever they objected to with **/char set** or **/char create** and it goes straight back to them. If you think it was right as it stood, **/char submit** sends it again unchanged. There is no limit on how many times a sheet can go back and forth.

Reading & Sharing Your Sheet

`/char create ...`	*(see Making Your Character — builds the whole sheet)*
`/char view show`	`/char view show user:@Players`
`/char export`	`/char export format:Image`

`/char export format:Parchment image`
the sheet on parchment, in the scroll font — for display; Discord strips an image's weave on re-upload, so use the Parchment PDF or Text block to travel

`/char export format:Parchment PDF`
the same parchment as a PDF — the one file that survives Discord re-uploads, sheet woven after its EOF

`/char export format:Career PDF`
the career record as a native-text parchment PDF, career woven after its EOF — survives Discord and imports back through /char import

`/char export format:Summary`
the career record — rank, merits, renown, dice history, pack, quests, lore — over a paste-able [TTRPG SUMMARY] block

`/char import`
hand an exported sheet OR career block to this server — a Parchment PDF (the carrier that survives Discord), a pasted block, or bare for a paste box; a GM approves. Careers move merits and renown to the imported totals and add dice history, items and lore — sheet, rank, quests, tags untouched

`/char submit` — *(resend your sheet after a rejection)*

With sheet approval switched on, an export goes to the GMs first. Running **/char export** posts the sheet block into the approval channel with **Release to player** / **Decline** buttons; the player sees only a private note that it has been sent. When a GM releases it, the block arrives by DM — or back in the channel they exported from, if their DMs are closed. Exporting is not an edit: it never changes a sheet's approval state and never stops anyone rolling. Exporting again replaces the previous request, so the channel holds one live entry per player. GMs export straight away, for themselves and for anyone else, and on servers not using approvals nothing changes.

The Pages of a Sheet

Beyond the stat block, a character accumulates things worth keeping. Each page can be read for yourself or for someone else with **user:**.

`/char view show full:true`	*(the card and every page below, on one post)*
`/char view inventory`	*(what they are carrying)*
`/char view standing`	*(merit and renown, and where each came from)*
`/char view rollhistory`	*(every natural die this character has rolled)*
`/char view rollhistory sides:6`	*(the same for a different die)*
`/char lore`	*(write your lore and send it to the Game Masters)*
`/char view showlore`	*(read approved lore)*

Inventory holds roleplay items — things an activity handed over, or a Game Master gave out by hand with **/char give user:@Players item:A tarnished silver key**. Each carries a number, so **/char take user:@Players id:3** removes one. Giving and taking are Game

Master-only.

Standing puts total merit and renown at the top, then lists every movement beneath it — the quest, activity or Game Master award that caused it, the amount, and how long ago. Merits are a lifetime tally that only climbs; renown is a currency that is spent again.

Roll history counts every natural die a character has ever rolled, drawn as a bar chart with the natural 20s and 1s marked. It follows the character, not the player, and covers every roll they make — typed, slash, in a fight or in an activity.

Lore opens a writing box, pre-filled with whatever you wrote last time. It goes to the same channel character sheets do, with Approve / Reject buttons; a rejection asks the Game Master why and passes the reason back. Only approved lore shows on **/char view showlore** — before that it says it is waiting, or why it was turned down. Rewriting retires the old request and sends a fresh one.

Nothing here is required. A character works perfectly well with an empty inventory, no lore and no renown — these are for tables that want to track more.

Your Thread

With a character forum set, every approved character gets a thread of their own there — the sheet first, then inventory, lore, standing, titles and associations as posts beneath it — kept current by the bot, so the sheet in your thread changes the moment a stat does. A button on the page asks a GM to update your lore document; everything else writes itself.

Your Roll Card

How much of your sheet appears when you roll is up to you.

`/char profile card style:Full`	*(the whole sheet)*
`/char profile card style:Compressed`	*(one line of stats)*
`/char profile card style:Off`	*(plain text rolls)*

Compressed puts everything on a single line under the roll — **STR 5 · CON 5 · DEX 4 · WIS 4 · LCK 2 · HP 8/8 · RR 2/2** — which keeps a busy channel readable without hiding where a modifier came from.

*A **stat roll always shows something**, even with your card Off: **1d20+4** says nothing about which stat it was or where the 4 came from, so those fall back to the compressed line. Choosing Compressed is respected rather than overridden — the bot never upgrades you to Full. Plain dice rolls honour Off completely.*

Saved Sheets

`/char profile save slot:vault`	*(keep a copy of your sheet)*
`/char profile load slot:vault`	*(put it back)*
`/char profile saves`	*(what you have saved)*

Loading a save is checked like any other change — an old snapshot cannot smuggle in a spread that breaks the current point allowance.

Profile

`/char profile on`	*(enable embed, max HP + rerolls)*
`/char profile off`	*(disable embed, plain text rolls)*
`/char profile show`	*(preview card without rolling)*

Sheet Import

Paste an exported sheet into any channel the bot watches.

`[paste sheet into channel]`	*(your own exported sheet, back onto this server)*
`[paste sheet] @Players`	*(Game Master importing for another player)*

Heroes

Hero is a **status**, not a class. A Game Master grants it, and it sits alongside whatever class and knight order a character already holds — a Hero can be a Green Knight Vanguard.

`/char hero user:@Players value:true`	*(Game Master grants it)*
`/char hero user:@Players value:false`	*(and takes it away)*
`/char signature user:@Players stat:Strength`	*(a Hero rolls that stat with advantage)*

It used to occupy the class slot, so a Hero could be nothing else. Anyone whose class said Hero has been moved across automatically and their class slot freed. Removing Hero status clears the signature stat with it.

The Queue

Everything waiting on a decision, in one place — character sheets, lore, merit trades and quest applicants, with jump links to each. It also surfaces any background job that is failing.

`/gm queue`	*(what is waiting)*

Pending lore had no listing anywhere else, so a submission whose queue post was deleted was effectively invisible. This finds it.

Approvals

`/config channels approvals channel:#sheet-approvals`	*(new sheets need GM sign-off)*
`/config channels approvals list:true`	*(every sheet still waiting — from the database)*
`/config channels approvals disable:true`	*(turn approval off)*
`/config channels approvalforum forum:#gm-approvals`	*(one forum, a thread per approval type — sheets, trades, duels, lore, exports)*
`/config channels approvalforum disable:true`	*(back to the single channel — posted items keep working)*

With an approval channel set, a player's new sheet is posted there for sign-off, pinging every GM role, with Approve / Reject buttons. Until approved they can't roll, heal or take fight actions — and once approved, their whole sheet can only be changed by a GM. Sheets a GM creates or edits skip the queue, and sheets made before approval was enabled keep working until someone edits them.

Every way a player can write to their own sheet goes to the queue: ***/char create****,* ***/char set*** *(any field — stats, order, class and weapons alike),* ***/char weaponemoji****,* ***/char profile load*** *and pasting an exported sheet. Building a character one* ***/char set*** *at a time is not a way past a GM. Editing a sheet that is still pending retires the old request and posts a fresh one, so the channel holds one live entry per player rather than a pile of stale ones. A rejected sheet can still be edited by its owner — that is how they fix it — and each edit sends it straight back for another look.*

A sheet that is ***still waiting*** *can be edited by its owner — spot a mistake before a Game Master gets to it and you can fix it, which retires the old request and posts a fresh one. Only an* ***approved*** *sheet is frozen to its owner.*

Pressing ***Reject*** *opens a box asking* ***why****. The note is optional, but it travels with the decision — it is written onto the request in the approval channel, sent to the player with the rejection, and shown again if they try to roll before fixing it, so nobody is left guessing at what to change. Declining an* ***export*** *asks the same way.*

A ***rejection is never the end of it.*** *A rejected sheet stays editable by its owner, so the player fixes whatever the GM objected to with* ***/char set*** *or* ***/char create*** *and rejoins the queue on their own. If they believe it was right as it stood,* ***/char submit*** *sends it again unchanged. There is no limit — a sheet can go back and forth as many times as it takes, and each resubmission retires the previous request so the channel still holds one live entry per player. The rejection notice spells out both routes, so nobody is left waiting on a GM to do it for them.*

A declined ***export*** *works the same way — running* ***/char export*** *again puts a fresh request in front of the GMs.*

Sheets are accepted from ***any channel the bot can read*** *— an ordinary text channel, a thread, a forum post, an announcement channel, or the text chat inside a* ***voice or stage channel****. Wherever it came from is recorded with the request, so the decision notice can find its way back there if the player's DMs are closed.*

The queue lives in the database, not in a Discord message. ***/config channels approvals list:true*** *shows every sheet still waiting — who, how long ago, and which channel it came from — even if the request was never posted, was deleted, or landed somewhere nobody reads. If the bot cannot post to the approval channel it says so on that list and pings the GM roles in the channel the sheet was submitted from, so a player is never left locked out in silence.*

Items & Pages

`/char give user:@Players item:A tarnished silver key \` `  note:Cold to the touch`	*(Game Master only)*
`/char take user:@Players id:3`	*(by the number in their inventory)*
`/char edit user:@Players id:3 item:Silver key note:Cold`	*(reword an item)*
`/char view show user:@Players full:true`	*(their card, and every page below it at once)*
`/char view standing user:@Players`	*(merit and renown, and where each came from)*

`/char view rollhistory user:@Players`	*(every natural die they have rolled)*

*Items are free text — whatever a story calls for. Activities can hand them over too, and a player reads them back with **/char view inventory**. Lore submitted with **/char lore** arrives in the sheet approval channel with Approve / Reject buttons, and a rejection asks you why.*

Character Pages

Point the bot at a **forum** and every approved character gets a post of their own — somewhere for lore, art and notes. The link then appears on **/char view show** and in search results.

`/config channels charforum channel:#character-sheets`	*(the forum)*
`/config channels gmcharforum channel:#gm-character-sheets`	*(GM-only forum for GM sheets — same five blocks and tags, behind the GM category's permissions)*

`(character forum)`

one thread per character: Sheet → Inventory → Lore → Standing → Titles → Associations → Dice, all bot-kept (dice hourly: d2–d20, averages, nat extremes); tags = order · class · Fallen · Hero; threads are staff-typed (players ask a Moderator/Expeditioner — a notice in every thread says so, with a Request lore update button — link your Google Doc and it lands in the GMs' Lore Docs approvals); GM sheets live in the GM-only forum, auto-created on update where the GM category exists

`/char page user:@Players`	*(make one now)*
`/char page user:@Players thread:#their-thread`	*(or link a post that already exists)*
`/char page user:@Players unlink:true`	*(forget it — the thread itself is untouched)*

Every page carries up to four **tags** — its order (White Knight, Black Knight…), its class (Vanguard, Defender, Siege Knight), **Hero**, and **Fallen** — so the forum's own filter answers "every Black Knight Vanguard" or "who has died" without a command. The class tag read the wrong column until 25/10 and never landed; the first boot after that writes every page again.

*Pages are made when a sheet is **approved**. If the forum is missing or the bot cannot post there, the approval still goes through and the Game Master is told what went wrong — a broken forum must never block a character. If a thread is later deleted, the next attempt makes a fresh one rather than linking to nothing.*

Searching the Roster

`/gm search order:Green Knight`	*(everyone in an order)*
`/gm search class:Vanguard hero:true`	*(combine filters)*
`/gm search order:— none set —`	*(find who still needs one)*
`/gm search who:NPCs`	*(or narrow to one side)*
`/gm search name:mat fallen:true`	*(part of a name, including the dead)*

Results read in the same order as everything else, with each character's page linked beside them. The fallen are left out unless asked for.

Preset Tags

```
/char tag assign user:@Players tag:Hero of
Kalidale

/char tag remove user:@Players tag:Hero of
Kalidale

/char tag list user:@Players
```

Custom Tags

```
/char tag custom action:Create emoji:[any emoji]
name:MyTag

/char tag custom action:Delete name:MyTag

/char tag custom action:List
```

For server emojis: type \:emojiname: in chat to get the full ID.

Heroes & Signature Stats

Hero is a status a Game Master grants, not a player choice — players who try to set it are refused. It sits alongside whatever class and knight order a character already holds, and both player sheets and NPCs can carry it.

`/char hero user:@Players value:true`	*(grant Hero to a player sheet)*
`/char signature user:@Players stat:str`	*(designate their signature stat)*
`/npc hero name:Hollow Lieutenant stat:str`	*(Hero NPC with a signature stat — a boss)*

A Hero may have one **signature stat** with **5 or more** points. Every roll using that stat — typed shorthand, **/roll**, and both attack and defence in fights, manual or automatic — is made with **advantage**, marked on the roll card, and never waits on a GM's yes. If the stat later drops below 5 the advantage simply stops applying until it is restored; an explicitly requested disadvantage still wins. Fighting on automatic, a Hero reaches for that stat whenever their weapons allow it and it is within three of their best.

HP, Healing and Rest

Your hit points and reroll tokens live on your sheet, and the typed shorthands below move them. The **!** prefix is optional — **hp +5** and **!hp +5** are the same message.

`!hp +5`	
`!hp -3`	
`!rerolls +1` `!rerolls -1`	*(reroll tokens, the same way)*

Heal (White Knight + WIS 5 only)

Targets another player — cannot self-heal.

```
!heal @Players
!h @Players
```

Roll Result	Effect	Charges Used
Natural 20	+2 HP restored	None
20+ (modified)	+2 HP restored	1
2 – 19	No heal	1
Natural 1	No heal	2

Rest Commands (Player)

A Game Master can point any of these at a player by adding their mention — **lrest @Players**. Default amounts shown — Game Masters can change them with **/config mechanics rest**.

Command	HP	Rerolls	Heal Charges
lrest	Full	Full	Full
srest	Half	—	—
hpfull	Full	—	—
hphalf	Half	—	—

Short rest restores HP only by default. A Game Master can re-enable rerolls/heal or change any amount.

Game Master HP & Rerolls Targeting

```
!hp @Players +5    !hp @Players -3
!hp +5 @Players    !hp -3 @Players
!rerolls @Players +1    !rerolls @Players -1
```

Game Master Rest Targeting

```
lrest @Players   srest @Players   hpfull
@Players   hphalf @Players
```

Restoring Resources (/existence heal)

Kill, revive and heal live under **/existence** since 15/10 — they used to sit under /gm, which was near Discord's 8000-character wall. Same options, same gates.

```
/existence heal user:@Players                          (full HP — the default)
/existence heal user:@Players restore:Everything       (HP, rerolls and heal charges)
/existence heal user:@Players amount:Half              (restore half of maximum)
```

`/existence heal user:@Players amount:Add value:3`	*(add 3, capped at max)*
`/existence heal user:@Players amount:Exact value:1`	*(set to an exact figure)*
`/existence heal npc:Hollow`	*(one NPC)*
`/existence heal npc:all`	*(every NPC at once)*

One command for every restore. Works on a player or an NPC (or **all** NPCs), and HP changes sync straight into any active fight. NPCs only have HP; heal charges are skipped for anyone who isn't a White Knight with WIS 5+.

global: restores everyone at once instead of naming a target — **Players**, **NPCs**, or **Everyone** together. It takes the same **amount** and **restore** options as a single target, so **/existence heal global:Everyone amount:Half** puts the whole server on half HP, and **/existence heal global:Players restore:Everything** hands every character HP, rerolls and heal charges back. Pick exactly one of **user**, **npc** or **global**.

*Unlike scheduled recovery, a global heal does **not** skip players out on a quest. A Game Master typing this has decided to heal the room, and a silent exclusion mid-session would be a nasty surprise. Heal charges still only reach White Knights with WIS 5+, and every change syncs into any fight already running.*

Scheduled Recovery

A server can run **any number of named schedules**, each with its own timing and its own strength. A light top-up every few hours and a full recovery overnight can sit side by side.

`/config mechanics autorest action:Add or update name:Breather \` `  hours:6 hp:50% rerolls:0% heal:0%`	*(half HP, rounded down, every 6h)*
`/config mechanics autorest action:Add or update name:Full Recovery \` `  hours:24 hp:100% rerolls:100% heal:100%`	*(everything back, once a day)*
`/config mechanics autorest action:List`	*(what is set, and when each next falls)*
`/config mechanics autorest action:Run now name:Breather`	*(fire one immediately)*
`/config mechanics autorest action:Pause name:Breather`	*(stop it without deleting it)*
`/config mechanics autorest action:Remove name:Breather`	*(delete it)*

Amounts use the same tokens as **/config mechanics rest**. A bare value **sets** the resource — **100%** full, **50%** half, **4** exactly four. A **+** prefix **adds** instead: **+4** is four more HP, **+25%** a quarter of their maximum on top. **0%** leaves it alone. Everything caps at the maximum and rounds down, so half of 11 HP is 5. A typo is refused when you set the schedule rather than quietly doing nothing at three in the morning.

Anyone on a quest that is in progress is skipped by every schedule. Their HP, rerolls and charges stay exactly where they are until the quest is completed, so being out in the field costs something. Applicants, and members of quests still open or already finished, are restored as normal. Heal charges only go to White Knights with WIS 5+, as everywhere else.

Give a schedule a **channel:** and each run is announced there, naming what it did, who was restored and who was left out in the field.

Because schedules are **named and independent**, the counters need not share a cadence. A common pair is HP overnight and the charge counters twice a day:

```
/config mechanics autorest action:Add name:Night
hours:24   hp:100% rerolls:0% heal:0%
```
(HP once a day)

```
/config mechanics autorest action:Add name:Charges
hours:12   hp:0% rerolls:100% heal:100%
```
(rerolls and heal charges every 12h)

***0%** means leave it alone, not set it to nothing — which is what lets one schedule move HP and another move only the charges. Both run on their own clocks without interfering.*

NPCs rest on the same schedule. They have only HP — no rerolls, no heal charges — so the HP setting is the whole of it for them, and any change syncs straight into a fight already running.

*Two groups are left alone, players and NPCs alike: anyone **out on an active quest**, and anyone **standing in a fight**. Healing a fighter on a timer would undo an exchange partway through. The **fallen** are skipped entirely — a rest is not a resurrection. Each reason is reported separately, so it is clear who was passed over and why.*

Each schedule carries its own clock in the database, so a restart or redeploy can neither skip a cycle nor fire one early. Adding a schedule, or resuming a paused one, starts its count from that moment.

```
/config mechanics autorest action:List
```
(every recovery schedule)

```
/config mechanics autorest action:Add or update
name:Breather \
  hours:6 hp:50% rerolls:0% heal:0%
```
(a light top-up)

```
/config mechanics autorest action:Run now
name:Breather
```
(fire one immediately)

```
(when they land)
```
(rests fall ON the hour — a 12-hour rest set at 14:37 next falls due at 02:00, not 02:37)

```
/config mechanics autorest action:Who is excluded
```
who the next rest will pass over, and why — the fallen, anyone on an active quest, anyone in an active fight, and which quest or fight is holding them

NPCs

NPC Management

```
/npc create name:Hollow Lieutenant str:14 con:12
dex:8
  wis:4 lck:3 weapon1:Weaponised appendage
weapon2:Talon
```
(full stat block — the boss of the Hollows)

```
/npc create name:Hollow tank str:8 con:18 dex:3
wis:1 lck:1
  weapon1:Weaponised appendage
```
(an elite: hit points first, reach second, no voice at all)

`/npc create name:Hollow str:4 con:3 dex:5 wis:1 lck:1` `weapon1:Claw weapon2:Talon`	*(the common Hollow)*
`/npc create name:Mysterious Stranger`	*(name only — stats added later)*
`/npc create name:Mysterious Stranger str:14 con:10`	*(fill stats in over time)*
`/npc manage copy name:Hollow new_name:Hollow 2`	*(duplicate an NPC, fresh HP)*
`/npc show name:Hollow`	*(full stat block for one NPC)*
`/npc hero name:Hollow Lieutenant stat:str`	*(make an NPC a Hero with a signature stat — a boss)*
`/npc hero name:Hollow Lieutenant remove:true`	*(strip Hero status)*
`/npc list`	*(shows stats and current HP)*
`/npc list category:Hollows`	*(only one category's NPCs)*
`/npc delete name:Mysterious Stranger`	

*Stats are optional — an NPC can be registered by name (and given an avatar) with no stats at all, then statted up later. Re-running **/npc create** with the same name updates only the fields you supply and leaves the rest untouched.*

NPC HP persists between fights. Knocked-down NPCs (0 HP or less) are left out of new fights until restored.

NPC HP & Healing

`/npc hp name:Hollow value:3`	*(set exact HP)*
`/npc hp name:Hollow`	*(omit value — full heal)*
`/npc heal names:all`	*(fully heal every NPC)*
`/npc heal names:Hollow, Hollow tank`	*(fully heal the listed NPCs)*

Speaking as an NPC

`/npc say name:Garrick speech:Fine steel, fair prices.`	*(speech — in quote marks)*
`/npc say name:Garrick action:polishes a blade`	*(action — italic emote)*
`/npc say name:Garrick action:polishes a blade` `speech:Fine steel.`	*(both, stacked)*
`/npc say name:Garrick` *opens a writing box: action, speech, a To picker of up to 25, a Groups list, and which activity to offer*	
`/npc say name:Garrick speech:Over here, @Aldric`	*(@Name in the text pings that person)*
`/npc say name:Garrick speech:Mind the ropes. to:@Aldric, @Brenna`	*(to: names them under the words — several, commas between)*
`/npc say name:Garrick speech:To arms! to:White Knights, The Falconers`	*(a knight order or a group: every living player in it)*
`/npc say name:Garrick speech:Fancy a wager? offer:Haggling`	*(an Interaction button under this line starts it)*

```
/npc say name:Garrick speech:Move along.
reply:<link>
```
(answers the linked line, the jump link on top)

```
/npc edit name:Garrick talk:Haggling
```
(the activity pre-picked whenever Garrick speaks)

A line is laid out in three blocks with a blank line between: the **action** in italics, the **speech** in quotes, then **who it is for**. An NPC may call players by name: the writing box has a **To** picker — up to twenty-five players, named under the words — and a **Groups** list of the knight orders and the server's associations, each expanded to the living players in it. **@Aldric** written in the speech, in the box as well as on the command, becomes a real mention by server nickname, display name or username, longest match first. **to:** on the command takes all of it at once — mentions, names, an order or a group, commas between; a bare name is tried as an order or a group first, **@Name** as a person first. Fifty people at most on one line. Only **people** are ever pinged from an NPC's mouth: never a role, never everyone, whatever is typed. A Game Master's own **/rp** takes **to:** and a To picker the same way; a player's never pings.

Under every line an NPC says sit two buttons, and sometimes a third — everyone sees them; what they do depends on who presses. **Reply** opens the roleplay box titled as a reply to that NPC, for anyone (a Game Master replies as their own character, with the To picker); the reply carries a small ↪ *replying to Garrick* line on top that jumps back to the line it answers. **GM** opens the speak-as box; a player pressing it is told quietly whose it is. A player's own **/rp** line carries a **GM** button too: it opens a box that asks **who answers** — the NPCs heard in that channel lately first — and posts the answer as that NPC, jumping back to the player's line. **Interaction** appears only when you offered an activity on that line — the box's Interaction field lists the server's activities with *None* first, and **offer:** does the same on the command — and starts that activity for whoever presses, the server's open/closed setting aside, since you chose to offer it. **talk:** on the NPC is the default pick in that dropdown, no more. Every line keeps its buttons, so several people can answer the same one.

Works in threads and forum posts too. *A thread cannot own a webhook, so the NPC's voice is created on the parent channel instead and every message is routed back into the thread it was called from — several threads under one channel share the same NPC webhook.*

Posts as the NPC through their webhook — their name and avatar, no dice rolled. Fill **action**, **speech**, or both: the action is italicised and the speech is wrapped in quote marks, a blank line between. Leave both blank and a **writing box** opens with roomy multi-line fields — easier for longer roleplay. Use **raw** to post exactly as typed.

Rolling as an NPC

```
/npc roll name:Hollow tank notation:1d20+8
label:strike
  flavour:The hollow lunges
```

```
/npc reroll name:Hollow tank [roll:adv]
```
(reroll that NPC's last roll in this channel — spends one of its LCK tokens)

```
/npc create name:Garrick str:4 con:4 dex:6 wis:8
lck:3 category:Vendor
```

/npc list [category:] [compact:true]
the roster, paged — fifteen with full stats a page, or sixty names a page in compact; ◀ ▶ turn the pages and a button swaps the view. Big rosters no longer flood the channel

Posts via webhook — appears as the NPC with their name and avatar. DDice uses **one shared webhook per channel**, so any number of NPCs can speak there without meeting Discord's limit of fifteen webhooks per channel.

/config mechanics cleanwebhooks
reclaim spare NPC webhooks — DDice keeps one per channel, so anything else it owns there is a leftover and can be freed

Bot requires Manage Webhooks permission in the server.

NPC Pages

Point the bot at a forum with **/config channels npcforum** and every NPC gets a page there — their statblock, their categories, their face and whatever lore is written — kept up to date as they change. The page wears their categories as Discord's own **tags**, so the sidebar filter sorts them for you.

Say what kind they are when you make them and the category comes into being on the spot: **/npc create name:Garrick category:Vendor**. The first vendor you write brings **Vendor** into being; everyone after joins it. Add more later with **/npc category assign** — an NPC can belong to several, which is why each has one page rather than one per category.

/config channels npcforum channel:#npc-pages	*(where the pages live)*
/npc create name:Garrick category:Vendor	*(made, filed, and written up)*
/npc category assign npc:Garrick category:Ally	*(a second category — a second TAG on their thread: tap tags in the forum to filter NPCs natively)*
/npc manage sync [name:]	*(write up everyone already made)*

Twenty tags is Discord's limit for a forum. Beyond that, NPCs are still given pages — they simply go untagged rather than the whole thing failing. Deleting an NPC takes their page with them.

Setting NPC Avatars

/config channels npcchannel #channel	*(set the NPC portrait forum — a thread per category)*

1. Admin runs **/config channels npcchannel #channel** to set the portrait forum.
2. Game Master uploads an image to that channel with the NPC name as the message text.
3. Bot adds a checkmark reaction to confirm. 4. Re-upload with the same name to update.

One Face for a Whole Order — or a Whole Category

Shared faces come from **tags**, not names. Post a picture in the portrait forum captioned with a bare **order** or **category** name and every member without a personal portrait wears it. Who wears what: their own face first, then their order's, then the first of their categories that has one. The old **Order | Name** pipe convention is retired — a pipe in a name is just a name.

`White Knight`	*(caption → shared face for every White Knight)*
`Merchant`	*(caption → shared face for every Merchant-tagged NPC)*
`Garrick Vale`	*(caption → that one NPC's personal face)*

Hidden Stats

`/config mechanics npcstats enabled:true`	*(reveal NPC stat blocks — hidden by default)*

*NPC roll cards hide STR/CON/DEX/WIS/LCK, the roll modifier and HP totals by default. Players see the name, order, the final roll total, the exact damage each hit deals, and a condition (unhurt / wounded / badly hurt / near death / down) instead of numbers — so the fight reads clearly without revealing what an NPC can take. Reveal everything with **/config mechanics npcstats enabled:true**. NPC management commands are Game Master-only regardless.*

NPC Records

An NPC keeps the same records a player does. **/npc sheet** shows the lot on one page — stats and HP, standing, inventory, lifetime roll history and lore.

`/npc sheet name:Hollow Lieutenant`	*(the whole record)*
`/npc give name:Hollow Lieutenant item:… note:…`	*(hand them something)*
`/npc take name:Hollow Lieutenant id:1`	*(take it back)*
`/npc npclore name:Hollow Lieutenant text:…`	*(write their story)*
`/npc delete name:Hollow Lieutenant`	*(remove them entirely)*

Their dice count too. Every roll the auto-pilot makes for an NPC — attacks, defences, reroll answers, initiative — goes into that NPC's lifetime tally, so a long-running villain builds a record of their own luck exactly as a player does.

Merit and renown work on an NPC the same way they do on a character, so an NPC can hold standing in the world, be paid in merit, or carry the reward for a job.

Categories

`/npc category create name:Hollows`	*(make a grouping)*
`/npc category assign name:Hollow tank category:Hollows`	*(file an NPC under it)*
`/npc category remove name:Hollow tank`	*(take it out)*
`/npc category list`	*(every category and who is in it)*
`/npc category delete name:Hollows`	*(remove the grouping)*

Temporary NPCs — Enemies for One Fight

Most enemies exist for one fight and should leave when it ends. A **temporary** NPC is a throwaway: no page, no roster seat, no record — it fights, and when the fight stands down, however it ends, every temporary NPC is swept away. Make them one at a time, clone a stock enemy by the handful through an encounter preset, or keep one that turned out to matter.

`/npc create name:Hollow str:3 con:2 dex:3 wis:1 lck:1 temp:true`	*(a throwaway — no page, swept after the fight)*
`/fight addnpc npc:Hollow, Hollow 2`	*(into a running fight, or name them on /fight start)*
`/instance preset save name:Ridge hollows merits:2 npcs:Hollow x3`	*(a saved scene; starting an instance from it clones Hollow three times, temporary)*
`/npc temp list`	*(every throwaway still lying about)*
`/npc temp keep name:Hollow 2`	*(make one permanent — it gains a page)*
`/npc temp clear`	*(sweep them all away now)*

***/gm check rehearse** opens a private sparring thread against a **Sparring Dummy** the bot runs — a temporary NPC of its own, so every button can be tried before the table sees it, and nothing is left behind.*

Weapons

Weapons players can pick from are kept as a server list, so names stay consistent.

`/char weapon add name:Gunlance atk:wis def:dex|con`	*(add one, with its rules)*
`/char weapon stats name:Gunlance atk:wis`	*(set or change them later)*
`/char weapon stats name:Gunlance atk:any`	*(lift a restriction)*
`/char weapon list`	*(see them all and what they allow)*
`/char weapon remove name:Gunlance`	*(take one off)*
`/char weapon add name:Weaponised appendage atk:str def:con`	*(the Hollows' own — NPC weapons sit on the same list)*
`/char weapon add name:Talon atk:dex def:dex`	*(and a Claw beside it: str|dex)*

A weapon can dictate **which stats it fights with**, separately for attack and defence. A gunlance is fired rather than swung, so it might attack with **WIS** and defend with **DEX** or **CON**. Give several with **|** — **atk:str|dex** — and use **any** to lift a restriction.

A player carrying that weapon is then held to it: attacking with a stat it does not allow is refused, and the refusal names what they *can* use. **The auto-pilot obeys the same rules** — an NPC fighting on automatic picks the best stat its weapons permit rather than always reaching for STR.

*A weapon with nothing set restricts nothing, so a list that predates this carries on unchanged. Carrying **one** unrestricted weapon frees the hand entirely; carrying two restricted ones lets you use either weapon's stats. An unarmed NPC is unrestricted, exactly as before.*

An NPC can also take a **class** — optional, the same three a player picks from — though a Hollow never does. A **Hero** NPC gets a signature stat with advantage on it, which makes for a decent boss. **Clear it** removes one, and it shows on their sheet and their fight card.

NPCs carry weapons too. Give one on **/npc create** and the auto-pilot is bound by exactly the same rules — a Hollow with a talon strikes with DEX instead of reaching for its best raw stat. The slot only accepts weapons already on the server list, so an NPC can never hold something whose rules are unknown; **none** clears it, and omitting it leaves whatever they carry alone.

Choosing How Auto Fights

Left alone, the auto-pilot reaches for whichever stat is **highest**. A character who fights with finesse over force can say otherwise — and so can a Game Master setting up an NPC.

/npc create name:Hollow tank weapon1:Weaponised appendage	*(arm a Hollow — the rest of its sheet is left as it was)*
/npc edit name:X	*(change an existing NPC — only the options you pass; the rest stays as it was)*
/npc manage rename name:X to:Y	*(rename an NPC — page, portrait, items, standing and history all follow to the new name)*
/npc reroll name:X	*(spend a reroll token — the pool is their LCK, refilled by rest like a player's)*
/npc manage export name:<npc>	*(the villain as a woven parchment PDF — survives Discord, imports anywhere)*
/npc manage import file:<pdf>	*unpack an exported NPC here — applied directly, GM-as-approver; stats, class, hero flag, auto-pilot preferences and lore travel; standing and webhooks stay local; HP full, death gate lifted*
/npc create name:Hollow tank atk_stat:Strength	*(and how it should fight on auto)*
/npc sheet name:Hollow tank	*(shows what it carries and what that allows)*

◈

Running Fights

Proper fights: everyone rolls to see who goes first, then takes turns. The bot keeps score.

Commands

/fight start players:@Artorius @Meliora @Zeus npcs:Hollow, Hollow tank	*any number of each — DEX initiative; fighters on the same total reroll among themselves until apart, and the card says who rolled what*
/fight start ... manual:true	*(skip roll, keep listed order)*
/fight start ... practice:true	*(friendly bout — fighters yield at 2 HP)*

/fight addnpc npc:Hollow, Hollow tank *(add NPC(s) mid-fight, Game Master)*

/fight add user:@Players where:Next
bring a player into a running fight — HP from their sheet, initiative rolled for the record; Next puts them straight after this turn, Last at the end, Game Master

/fight order sequence:@Artorius, Hollow, @Meliora, @Zeus *(reorder players + NPCs, Game Master)*

/fight atk stat:str target:@Players
attack a player — the form opens for your words (flavour: given, it swings at once); with one foe the target may be left off; /fight atk alone offers the stat buttons

/fight act action:Grapple target:@Players
STR-only grapple attempt, STR 4+ on Knightfall — the target answers with /fight act action:Save (STR only). If the attempt meets or exceeds the save, the hold takes: immobile, 1 wound a round, and any action on a flat d20 — though a captive can still attack anyone, the grappler included. A grab of 20 takes it whatever the save, for 2 wounds; a grab of 1 fails outright and leaves your next defence a flat d20; a save of 20 slips free unless the grab was a 20 too, and leaves your next attack flat and the saver +2. The grappler may release freely and can never strike their own captive

/fight act action:Grapple (a strike pending on you)
a grapple as your DEFENCE — STR 4+, 1d20+STR against the attack, ties to the attack. Beat it and the blow does nothing and the striker is held — the wounds start once your turn has come round; a natural 20 takes hold whatever the totals and banks +2 on your next attack; fall short and the blow lands as on any failed defence, a natural 1 adding its point. Not against a natural 20, a grab, a feint or a kept hold; not from a hold, while holding someone, or on a striker already held. The defence row's Grapple button does the same

/fight act action:Grapple npc:Hollow tank target:@Players *(Game Master grapples AS the NPC — same STR contest; the player answers with /fight act action:Save)*

/fight act action:Save
your STR save against the pending grapple — GMs save for an NPC with npc:Name; auto NPCs save themselves

/fight act action:Save npc:Hollow tank *(Game Master rolls the NPC's STR save against a player's grapple; auto NPCs save themselves)*

/fight act action:Escape
on your turn while held: the grappler's hold rolls 1d20+STR first (signature advantage honoured), then you roll 1d20+STR against it; ties keep the hold. Break out first and the round costs nothing; fail and it takes the round's wound at once — 1 more for each further failure that round, 2 on a natural 1. A break of 20 frees you whatever the totals and leaves the grappler's next attack flat. A hold of 20 makes your break a flat d20; a hold of 1 slips — you are free at once, with no wound, and the grappler's next roll is a flat d20 at disadvantage

/fight act action:Escape npc:Hollow tank
Game Master breaks a held NPC free — on its turn, or as its answer when a player keeps the hold. The same live STR contest, the same naturals and wounds

(Maintain the hold)
the holder's button on their turn: roll 1d20+STR to keep the grip, and the captive is pinged to answer — Break free (STR against it; ties keep the hold) or Stay. Staying, or no answer by the turn clock, keeps the hold, and the round's wound lands at the end of the captive's turn. An NPC on auto always struggles. A hold of 1 slips at once: the captive is free with no wound, and your next roll is a flat d20 at disadvantage

/fight act action:Stay
let a kept hold stand — the answer the Stay button gives; a Game Master answers for an NPC with npc:Name

/fight act action:Release *(the holder lets go — a free action, the turn stands; GMs may part any hold with target:)*

(the buttons)
on your turn: five stat buttons to attack with, then Grapple · Feint · Disarm beneath (each asks whom — Disarm lists the NPCs; Feint then asks what you pretend) — no Grapple while you are held. Disarmed, your turn carries Retrieve alone. When a strike comes at you, the defence row adds Deflect · Disarm · Grapple. Holding someone adds Maintain the hold (your STR roll; they answer Break free or Stay) and Release; being held adds Break free. Save and Insight sit on the card that asks. Every one of them opens a short form first — what you do, what you say, both optional — and your words sit on the card; a blank form is a plain roll. With one foe standing, an attack press goes straight to the form

/fight act action:Release npc:Hollow tank *(Game Master releases AS the NPC holder; add target: to force-part any hold from the outside)*

/fight act action:Deflect
shield deflection against a PvE strike — needs a shield equipped and STR 4+ (the gate holds whichever stat rolls), once per round, and a natural 20 cannot be turned. Roll STR or DEX (stat:) to beat the attack roll; optionally redirect_npc: sends the blow into another enemy for 1 damage — and the enemy loses its next turn retrieving the weapon. Fall short and it lands on you for 1. A natural 20 turns it whatever the totals, the redirect deals 2, and your flat next attack gets +2; a natural 1 fails outright for 2. Either way your next attack roll is a flat d20 — after a 1, your next defence too

/fight act action:Disarm
NPCs only, DEX 4+, no blade needed. Against an NPC's strike (once per round, never a natural 20): DEX to beat the attack — no damage, and the NPC spends its next turn retrieving the weapon; fall short and the strike lands on you for 1. On YOUR turn (target_npc: or the Disarm button): your 1d20+DEX against the NPC's 1d20 + the better of its STR and DEX, rolled by the bot — ties to the NPC, no naturals on its die. A natural 20 disarms whatever the totals and wounds it 1 (against a strike it also banks +2 on your next attack, flat or not); a natural 1 fails for 2 wounds and disarms YOU. After any disarm, your very next roll is a flat d20

/fight act action:Retrieve
disarmed, your next turn goes to the weapon: the Retrieve button (or this) opens a short form — what you do, what you say — and the turn passes. No attack, grab, feint, disarm, escape or hold until you have; whatever flat roll you owe waits for your next real one. A skipped turn counts as the retrieval

/fight act action:Deflect · /fight act action:Disarm (vs your NPCs)
player abilities your NPCs face: a deflected strike can be redirected into ANOTHER of your enemies for 1 damage (2 on a natural 20), and the NPC that threw it loses its next turn retrieving the weapon. A disarm — against its strike, or on the player's own turn, DEX against the NPC's better of STR and DEX, which the bot rolls — does the same; a 20 wounds it 1 as well. Your NPCs never disarm, and none of it works against a natural 20

/fight act action:Retrieve npc:Hollow

Game Master spends a disarmed NPC's turn on its weapon — or press its Retrieve button; a short form takes what it does and says. The auto-pilot and the turn clock retrieve on their own, and a skipped turn counts

/fight act action:Feint feint:"..."

a deception IN A FIGHT (away from one, it is /deception), and it spends either half of the fight. On YOUR turn it is an attack — WIS against their insight, and if they fall for it the blow lands with normal damage (a natural 20 still crits) AND their very next roll is a flat d20. A feint of 20 fools them whatever the insight; a feint of 1 is a total failure. An insight of 20 sees through it unless the feint was a 20; an insight of 1 is fooled. With a strike pending on YOU it is a defensive feint — WIS in place of your usual stat, though not against a natural 20 — and if the blow misses, the attacker's very next roll is flat; a defensive feint of 1 is a total failure, and the blow lands whatever the totals (unless the attack was a 1 too). THE PRICE, landed or not: your own very next roll is a flat d20 — at disadvantage too after a 1. WIS 4+; ties go to the target. ONE FEINT PER HONEST ROLL: after a feint you must make an ordinary stat roll before you can feint again — the flat roll a feint costs you counts

/deception target:@Players

a deception AWAY FROM A FIGHT — a WIS contest in a market, a hall, a cell; target_npc: makes an NPC the mark, its insight rolled by the bot. A form asks what you pretend (everyone sees it), what you are really planning (kept back until the dice have spoken) and what you say. Both roll at once and the totals decide, ties to the mark; a natural 1 fails outright, and no other natural counts. Fooled, their very next roll is a straight d20 — a chat roll, /roll, a scene, a called check or a fight elsewhere. The price, whatever happens: your own very next roll is a flat d20, at disadvantage after a 1. No cooldown. Refused while you or they are fighting in the channel: there, it is a feint

/deception npc:Hollow Lieutenant target:@Players

Game Master deceives AS the NPC — the same form, the card posted to the table, the price on the NPC: its own next roll is flat, wherever it rolls next — /npc roll, a called check, a fight. An NPC that is fooled carries its flat roll the same way

/fight act action:Feint feint:"..." npc:Hollow Lieutenant target:@Players

Game Master feints AS the NPC — WIS vs WIS; the player answers with /fight act action:Insight, and a fooled player rolls their very next roll flat — and the NPC pays the price too: its own next roll is flat

/fight act action:Insight

your WIS check against the pending feint — GMs roll for an NPC with npc:Name; auto NPCs check themselves. If you already owe a flat roll — fooled before, or a feint's or a deception's price — even this roll is flat

/fight act action:Insight npc:Hollow Lieutenant	*(Game Master rolls the NPC's WIS insight against a player's feint; auto NPCs check themselves)*
/fight atk stat:str target_npc:Hollow tank	*(attack an NPC)*
/fight atk stat:str npc:Hollow target:@Players	*(Game Master attacks AS the NPC)*
/fight def stat:dex	*(defend — the form opens (flavour: rolls at once); /fight def alone offers the stat buttons)*

(buttons)
every prompt carries its answer: the attack card offers five DEFEND stat buttons, the grapple card a Save, the feint card an Insight, the defence card Resolve, a disarmed turn Retrieve — and Reroll rides along. One answer per strike: once your defence is in, Reroll is the only way to roll it again. One press, same rules, same audit trail. Every turn line lists everyone standing with their HP, and any condition the Game Master has marked you with, counting down. A quiet spell (ten minutes unless the Game Master sets otherwise) and the bot pings whoever the fight is waiting on, once a turn

(the GM's NPC buttons)
an NPC's turn line and its defence prompt carry five stat buttons only a GM may press — the target is asked for if there is more than one, the form opens, and the blow is struck as the NPC. Pressing Resolve as a GM asks what happens; the words post under the outcome

/fight def stat:dex npc:Hollow — *(Game Master defends AS the NPC)*

/fight rr
reroll last fight roll — 1 token. The card says which roll it was (an attack, a defence, a grab, a feint, a hold) and who answers it; a hold rerolled into a 1 slips at once

/fight atk stat:str target:@Players roll:adv
advantage on a fight roll waits on a GM's yes, as every roll you pick it for does — name the stat with it (the stat buttons roll plain); the turn clock waits meanwhile, and if the fight moves on, nothing rolls

/fight resolve — *(resolve the exchange)*

/fight status — *(show turn order and HP)*

/fight log [scroll:true]
repost the recap of the last finished fight in this channel — only the fighters who actually took part, and only that fight: a new fight always starts a fresh recap. scroll:true hands it over as a parchment PDF in the scroll font

/fight skip — *(skip the current turn — fighter stays in, Game Master)*

/fight hp value:3 target_npc:Hollow tank — *(set HP mid-fight, sheet synced, Game Master)*

/fight kick target_npc:Hollow tank — *(remove a fighter, fight continues, Game Master)*

/fight refill npcs:all — *("all" or names — refill reroll tokens, Game Master)*

/fight auto mode:Full ... — *(bot resolves whole fight, Game Master)*

/fight auto mode:Full teams:@Artorius @Meliora @Zeus vs Hollow, Hollow tank — *(party-vs-monsters sides, Game Master)*

/fight auto mode:NPCs only ... — *(bot plays NPCs, Game Master)*

/fight auto mode:Demo — *(example showcase, Game Master)*

/fight auto ... practice:true — *(a bout in any auto mode, Game Master)*

/fight forfeit — *(concede — HP preserved)*

/fight end — *(Game Master only)*

How a Fight Runs

When a fight starts, the bot rolls DEX initiative (1d20 + DEX) for every fighter and orders the turn order from highest to lowest, ties broken by the raw d20. Add **manual:true** to skip the roll and keep your listed order, or use **/fight order** with a comma-separated sequence.

The turn clock: a fight waits five quiet minutes on whoever it is waiting for, then reminds them — press **Still writing**, or just keep typing — and at fifteen the turn passes: skipped, or, where the Game Master has set it so, the bot attacks for them at whoever they last struck (else the weakest foe standing). A defence is never skipped: the bot rolls it. A Game Master sets the minutes for a channel with **/session clock**.

Knocked-down fighters: anyone at 0 HP or less is left out when a fight starts or when NPCs are added, with a warning naming them. Restore NPCs with **/npc heal** or **/npc hp**, players with rests or **hpfull @Players**.

Practice bouts: add **practice:true** to **/fight start** or **/fight auto** and the fight becomes a friendly spar. Everything runs exactly as normal — initiative, rolls, damage, crits, carry-over effects, rerolls, recap — but the cut-off moves from 0 HP to **2 HP**. A fighter bows out the moment they reach 2, and damage never carries anyone below it, so nobody leaves the yard worse than winded. Sparring partners already at 2 HP or less are left out at the start, the same way knocked-down fighters are. The bout is announced on start, marked on **/fight status**, and noted again in **/fight log**, so a spar can never be mistaken for the real thing.

HP stays in sync: any mid-fight HP change — **!hp**, **!heal**, rests, **/npc hp** or the **/fight hp** command — is mirrored straight into the fight, so a heal is never overwritten by the next exchange. Anywhere a command takes NPC names, **category:Name** adds a whole category at once.

Picking a Target

Leave **target** off **/fight atk** and the bot asks who you mean, listing everyone still standing with their HP — NPCs marked, the fallen and the already-downed left out, and yourself excluded. Choosing one hands back the command with the target filled in, ready to send.

With only one opponent left there is nothing to choose, so it simply names them. The menu belongs to whoever opened it — nobody else can pick your target for you.

A Custom Roll in a Fight

When it is your turn, **/roll … fight:true** submits that roll in place of **/fight atk** or **/fight def** — so a Game Master can call for something unusual without the fight chain breaking and everyone falling back to rolling by hand.

`/roll dice:2d6+3 fight:true target:@Artorius` *(attack with 2d6+3)*

`/roll dice:1d100 fight:true` *(defend with a d100)*

`/roll action:Grapple target:@Artorius`
any fight ability straight from /roll — the same menu as /fight act (pick Save to answer a pending grapple, Insight for a feint, and so on). No advantage option here — /fight act roll: carries that

`/roll stat:wis fight:true target:@Artorius` *(attack with WIS instead of STR)*

It writes into the same fight the normal commands use, so **/fight resolve** handles it exactly as ever — damage, criticals, carry-over effects and the recap. The die size is remembered, so a natural 20 on a d6 is not mistaken for a critical.

*It has to be asked for. A player rolling casually mid-fight should not accidentally commit their turn, so nothing is submitted without **fight:true**. If it is not your moment the roll is refused with the reason, and stands alone instead.*

Your Preferred Stats

`/char prefer atk:Dexterity def:Constitution`	*(your own, for when auto rolls for you)*
`/char prefer`	*(see what is set)*
`/char prefer atk:Clear it`	*(go back to using your best)*

This matters to players as well as Game Masters: **/fight auto** in full mode rolls for **everyone** in the fight, so without a preference your character swings with their strongest arm whether that suits them or not.

*A preference **never overrides a weapon**. If what you asked for is not one of the stats your weapons allow, your best allowed stat is used instead and **/char prefer** tells you so — setting one can only ever narrow a free choice, never break a rule.*

Damage

Situation	Damage
Attack total ≥ Defence total	1
Attacker natural 20	Lands whatever the totals — 2 (the +1 bonus)
Defender natural 1	+1 bonus
Attacker nat 20 + Defender nat 1	4 total
Attacker nat 20 + Defender nat 20	The attack lands whatever the totals — 2
Defence total > Attack total	0 (blocked) — unless the attack is a natural 20
A wound (held, a failed break, a special move)	1 — a wound is a point of damage, 1 HP
Fighter reaches 0 HP	Knocked down, removed from turn order, HP goes negative

Players can reroll using **rr / rra / rrd** after their initial roll before **/fight resolve**.

Critical Effects (carry-over)

A natural 1 or natural 20 leaves a mark on the *next* roll, in both manual and auto fights:

Trigger	What happens
Natural 1 on an attack	The attack fails automatically, whatever the totals say — and the attacker's next defence is rolled as a flat d20 (no stat, no advantage)
Natural 20 on an attack	The blow lands automatically, whatever the totals, for 2 — 4 against a defending 1. It cannot be deflected, disarmed, grappled or read by a defensive feint. No carry-over: an attacking 20 pays out as damage
Natural 20 on a defence	The blow is parried automatically — unless the attack was also a natural 20: twenty meets twenty, and the attack lands whatever the totals, for 2. Either way the defender gains +2 TO HIT on their next attack roll (added to the stat modifier — never to damage)

Each carried effect is consumed by that fighter's next matching roll and announced when it lands ("presses the riposte", "defends on a flat d20"). Leaving a fight clears any pending effects.

Naturals on the Special Moves

Grapples, holds, feints, deflections and disarms have their own 20s and 1s, read before the totals; a deception away from a fight has only its 1:

Roll	What happens
Grapple of 20	The hold takes whatever the save, and the target takes 2 wounds
Grapple of 1	Fails outright, whatever the save, and the grappler's next defence is a flat d20
Grapple save of 20	Slips free — unless the grab was a 20 too — and the grappler's next attack is a flat d20; the saver's next attack gets +2
Grapple of 20 against a strike	Takes hold whatever the totals, no damage, and banks +2 on your next attack
Grapple of 1 against a strike	Fails outright: the blow lands, the defending 1 adding its point
Held	1 wound a round: at the end of your turn, or at once when a break fails (the turn's end then costs nothing); 1 more for each further failure that round
Break of 20	Free whatever the totals, and the grappler's next attack is a flat d20
Break of 1	Fails, for 2 wounds

Roll	What happens
Hold of 20	The captive's break is a flat d20 — or, if they stay, their next roll is
Hold of 1	The hold slips at once: the captive is free, with no wound, and the grappler's next roll is a flat d20 at disadvantage
Feint of 20	Fools them whatever the insight; the blow lands, a 20 for 2
Feint or deception of 1	A total failure — a defensive feint of 1 lets the blow land whatever the totals — and the user's next roll is a flat d20 at disadvantage
Insight of 20	Sees through a feint, unless the feint was a 20
Insight of 1	Fooled by a feint whatever the totals — the blow lands, the defending 1 adding its own
Deflect of 20	Turns the blow whatever the totals; the named enemy takes 2, and your flat next attack gets +2
Deflect of 1	Fails for 2 wounds; your next defence is flat as well as your next attack
Disarm of 20	Disarms whatever the totals and wounds the NPC 1; against a strike it also banks +2 on your next attack, flat or not
Disarm of 1	Fails for 2 wounds and disarms you: your next turn goes to retrieving the weapon

A feint is a deception in a fight; /deception is a deception away from one, refused to anyone fighting in the channel. Every feint and every deception has a price, landed or not: the user's very next roll is a flat d20 — a mark in the fight when they are in one, a mark on their sheet anywhere else, an NPC's too. One feint per honest roll, that flat roll counting as one; /deception has no cooldown. After any disarm the disarmer's very next roll is a flat d20, and a fighter disarmed — or an NPC whose blow was deflected — spends their next turn retrieving the weapon. One answer per strike: a defence is rerolled with a token, never rolled again. A held fighter can still attack anyone, the grappler included, on a flat d20, and a held turn that the clock or a Game Master skips still ends with its wound.

When a Fight Ends

However a fight finishes — a knockout, a forfeit, a kick, **/fight end** or an auto-resolve — a single public **result post** goes to the channel where everyone can read it. Nothing important is left in a private reply: the Game Master's confirmation for **/fight end** stays private, but the result itself is posted for the whole table.

The post names the **victor**, then lists every combatant's **final standing** — exact HP for players, a condition band for NPCs while their stats are hidden — followed by the recap.

The **recap** covers players and NPCs alike, in three parts. **Rolls**: how many attacks and defences each fighter made, their average total, and their best and worst natural dice.

Damage: dealt and taken, natural 20s and 1s, and rerolls spent. **Blow by blow**: every exchange in order — both rolls, the natural die and the final total for each side, and whether it landed or was blocked, with natural 20s and 1s marked. Very long fights show the most recent exchanges and say how many earlier ones were trimmed; the roll and damage figures still cover the whole fight. Long recaps are split across messages so nothing is lost to Discord's length limit.

/fight log re-posts the last finished fight's recap in that channel at any time, blow-by-blow included.

NPCs as combatants: a Game Master lists NPCs in **npcs:** (comma-separated) on start or **/fight addnpc** later. On an NPC's turn the Game Master adds **npc:Name** to **/fight atk** or **/fight def**; attack an NPC with **target_npc:Name**.

Auto Modes

/fight auto mode:Full rolls attack, defend and damage for everyone and plays the fight through to a winner, saving HP to each combatant's sheet as it changes. Add **teams:@Artorius @Meliora @Zeus vs Hollow, Hollow tank** for proper sides — fighters only target the enemy team, and the last team standing wins. **mode:NPCs only** starts a normal fight where the bot takes the NPCs' turns automatically while players still use **/fight atk** and **/fight def**. **mode:Demo** runs a throwaway example.

Automatic rolls use the fighter's highest of STR or DEX, for attack and defence alike (ties go to STR) — or a Hero's **signature stat**, when their weapons allow it and it is no more than three below that best, since advantage is worth about three. They post the same full roll card as a manual roll, an advantage showing both its dice, the one not kept struck through. Each NPC's cards appear under that NPC's own name and avatar (via webhook).

NPC rerolls: in auto modes each NPC carries its own reroll tokens — LCK per fight. A token is spent only when the natural die shows **8 or less** (server-tunable via **/config mechanics npcreroll**; 0 disables): a defender about to be hit rerolls first, then a blocked attacker may answer — one each per exchange. **/fight status** shows remaining tokens, and **/fight refill** restores them mid-fight.

Duels

A challenge between players, put to the Game Masters as one message rather than a scattered argument in chat.

`/duel`	*(raise one)*
`/duel terms:First blood, no rerolls`	*(and say how it will be fought)*

The post carries four buttons. Others press **Stand in** to attach themselves, **Step out** to leave, and when at least two are in, whoever raised it presses **Send to the GMs**. It then appears in the approval channel with **Allow it** / **Decline**, so the whole table can see what was asked and what was answered. **Withdraw** pulls it at any point.

One duel per player at a time *— you cannot raise a second, nor stand in someone else's while yours is open. Withdrawing frees you immediately. A declined duel comes back with the Game Master's reason, and an allowed one is announced where it was raised.*

Approval does not start the fight — it clears it. A Game Master then runs **/fight start** with the fighters, which the approval message spells out ready to copy.

Rehearsal, Fight Settings and the Big Red Button

`/gm check rehearse`
a private sparring thread against a dummy the bot runs, so every button can be tried before the table sees it (GM)

`/config mechanics fightping enabled:true` — *(@-mention players on their turn — off by default)*

`/config mechanics advapproval enabled:false`
let players pick advantage and disadvantage freely; on by default, a player's own pick waits on a GM (Admin)

`/config mechanics turnclock remind:5 skip:15`
the turn clock, fights and initiative alike: minutes to the reminder and to the turn passing, 0 = never; timeout:auto rolls a quiet fighter's attack (Admin)

`/session clock remind:10 skip:30` — *(one channel's own clock — a slower table (GM))*

`/config mechanics npcreroll threshold:8` — *(NPC auto-reroll on nat ≤ N — 0 disables)*

`/fight end all:true` — *(end every active fight on the server at once — recaps post in their channels; HP states persist)*

Advantage Waits on You

When a player picks advantage or disadvantage themselves — any roll, in a fight or out of one, slash or typed — a card goes up in the channel naming them and the command, pinging the GM roles. **Allow** pings the player with a **Roll** button, theirs alone for ten minutes, and the command then runs as they asked it, form and all. **Deny** rolls it plain at once. Five minutes unanswered closes the card and tells the player no. One waits per player per channel; the turn clock holds while it does; and if the fight has moved on by the time you answer, nothing rolls.

Your own rolls never wait, nor NPC turns, nor anything you or the bot give: marks, Hero signatures, conditions, the checks you call. ***/config mechanics advapproval enabled:false*** *lets players pick freely again.*

◈

Quests

GMs create quests with lore, objectives, details and rewards. Quests are posted as a message with an Apply button and also appear on the board. Players apply, a Game Master approves the party, and on completion merits are auto-awarded while other rewards are listed for the Game Master to hand out.

For Players

`/quest board` — *(list quests (filter: open/active/completed/all))*

`/quest show number:1` — *(full details of one quest)*

`/quest roster number:1` — *(see applicants and the party)*

`/quest party apply number:1`	*(apply to join — or tap Apply on the post)*
`/quest party withdraw number:1`	*(leave or cancel your application)*
`/quest record user:@Players`	*(one player's finished quests — what they have been on)*

Quests are auto-numbered for easy recall, e.g. ***#001-Hollow Cave*** *(repeatable quests keep the name and get a fresh number each time). Party size is a hard cap or a suggestion — the Game Master chooses with* ***hard_cap****, and* ***force:true*** *on approve overrides a cap. Point a quest at a thread with* ***/quest runchannel*** *and its completion rewards are announced there.*

Your Party's Thread

When a run starts it opens its own thread in **quest-instances** with the whole party pulled in. That thread is where the quest happens: fights fought there log themselves on the quest's timeline, the Game Master's rally pings everyone in it, and the ending is written up there before it goes anywhere else. A player holds one seat at a time — you cannot be approved onto a second quest while a run is still live.

Instances — Encounters, Chapters and Older Quests

Not every session comes off the board. The Game Master can open a run with **/instance**: an **encounter** on the fly, a numbered **chapter** of a campaign, or a **quest from before the bot** picked up where it left off. No board, no applications — the Game Master ticks who is in it from the roster and opens it; it gets a thread of its own in quest-instances like any run, and pays out like one (an older quest pays only what the Game Master sets). The seats are the Game Master's: there is no Join button, so if you want in, ask. An instance does not count as your one quest, so a party already out on a quest can still be jumped by bandits. A run may be **recorded**: then everything said in its thread goes into its log, not only what passes through the bot — the thread says so when it is.

`/instance list`	*(every run going now, its kind, where, and its time so far)*

Campaigns

A campaign is the long arc — quests and encounters under one name. Its card shows the premise, what is done and your own part in it; the Game Master's notes and status stay on their side.

`/campaign list`	*(every campaign on the server)*
`/campaign show campaign:The Falconer's War`	*(the premise, what is done, and your part)*

Roleplay on the Record (/rp)

Outside a fight the same boxes the fight buttons open are a command away: **/rp** opens them — what you do, what you say, a **stat to roll** from a dropdown of this server's own, and any **dice** — and **/rp action:… speech:… roll:… dice:…** skips the box. The line goes out in your own name and face, shaped as the cards are: *the action*, then "the speech", then the roll beneath. A roll keeps the rules a typed one does — the Hero's advantage, a mark you carry, a deception that fooled you — and **rr** rerolls it as it would a typed one. If

the Game Master has called a check on you here, a **stat roll answers it**: the check's own terms, its button darkened, its outcome under your words. Inside a run the words become a beat on the timeline and the roll a roll in its log, in the recap and in the story scroll that comes with the completion card.

Every line carries a **Reply** button, and so does every line an NPC says — press it and the same box opens as a reply. A reply wears a small line on top, ↪ *replying to Name*, and that name is a link: tap it and you are taken to the line it answers. Several people can answer the same line; the button never moves. Beside it on your own lines sits **GM** — the Game Master's: they can answer your line as any NPC, and their answer links back to it the same way.

`/rp`	*(opens the box)*
`/rp action:draws her blade speech:Not one step closer.`	*(posts at once)*
`/rp speech:Stand aside. roll:str`	*(with a stat roll — it answers a check called on you here)*
`/rp action:swings dice:1d8+2`	*(with any dice)*
`/edit`	*(fix the words of a line of yours — the roll and the reply link stay as they were)*
`/edit delete:true`	*(take one back)*

Taking Turns — Initiative

When the Game Master calls for initiative, a card appears with a **Join** button — press it to take a place. Once the order is rolled (d20 + DEX, ties rerolled), each turn gets its own card naming whose it is and who is next, and the rounds are counted. On your turn, post, then press **Done**. Quiet for five minutes, you are reminded: press **Still writing**, or just keep typing. At fifteen the turn passes.

`/session turn`	*(the order, whose turn it is, which round)*
`/session turn action:next`	*(Done, typed — for your own turn)*

The Chronicle and the Review

When a run is completed, the Game Master's telling of it lands in your own thread in **quest-chronicle** — one thread per adventurer, every quest they finished, told by whoever ran it — and the summary is linked on your standing page. The run's thread then carries a review button: a score out of five and a line or two, for the Game Masters alone to read. **/quest record** lists what you have been on.

Writing a Quest

`/quest create`

bare, a five-field writing window opens — name, objectives, lore, details and rewards as full paragraphs. Numeric options (merit_reward:, party_size:, hard_cap:, gm_style:) ride along. from:N seeds the window from an existing quest as a fresh draft — a template copy, unlike instance. With name: given, everything stays inline as before

/quest edit number:1
the same window, prefilled with what stands — the natural editor. Saving updates the board embed and renames the board and planning threads. Numeric options apply directly without the window

/quest create name:Hollow Cave objectives:... merit_reward:2 party_size:4 hard_cap:true *(create a quest)*

*Every **number:** option across /quest autocompletes — start typing a number or part of a name and the matching quests appear as "#012 — Hollow Cave (open)".*

The Pipeline

/config channels questforum channel:#forum *(make the quest board a forum — one thread per posted quest (Admin))*

/config channels questthreads channel:#forum
optional split: per-quest planning threads open in this secondary forum instead, and the pipeline stage tags ride along with them — so the planning forum holds only the books and the DM roster. Disable to fold threads back (existing threads stay where they are either way) (Admin)

/config channels questinstances
a forum where every STARTED quest opens its own thread for party — the DM and each member pulled in by mention, the clock and reminders following them there. Optional: without it a quest runs in its run channel as before

/config channels questplanning channel:#gm-forum
a private GM forum: /quest create opens a planning thread there with the full quest record, and every application and lifecycle event mirrors into it; /quest post is the flip that opens the public board thread. Setup also creates the seven pinned pipeline BOOKS — Concept, Awaiting Approval, Approved, In Progress, DMs Available, Archived, Completed — the same way the roll-audit forum builds its books, plus the matching stage tags. Every quest keeps one index entry (name, GM, party, links to its planning thread, board post and the party's room) that moves between books as it goes; a live run shows how long its clock has been going, anything sitting still for days says so, Completed entries carry the run counter, and the DMs book is the roster (Admin)

/quest stage number:1 stage:approved
move a quest through the hand-set stages — or just press the advance button at the bottom of its planning thread (→→, one press each; at Approved it points to /quest post). Posting, archiving and completing re-tag automatically — each stage line in the planning thread REPLACES the last, so the walk never piles up; posting leaves exactly one line: the board link

(buttons)
each application in the planning thread carries Approve / Kick buttons; at the Approved stage the thread's button becomes Post to board — GM-gated, same checks as the commands

/config mechanics questspinoff enabled:true
the board becomes listings: approvals stage, and one launch births a run carrying the whole staged group

(who runs it)
the first GM to approve an applicant becomes that quest's DM — /quest handoff passes it to another GM. When approvals reach the party size, that DM is pinged once in the planning thread

/quest dm style:... brief:...
your DM card on the DMs Available roster — style, a short brief, available:false to step back, and a running tracker: quests written · parties guided to completion. Re-rendered on every card change, quest creation and completion

/quest post number:1
post the quest with an Apply button. With a quest forum configured this opens the quest's own thread on the board — applications, party changes, start, pause, public notes and completion all mirror in, and the thread archives when the quest completes. Pass channel: to post plainly instead

/quest archive number:1
take a quest off the board — applications close, the Apply button drops, the board thread locks and archives; /quest post re-lists it

Applicants and the Launch

/quest party approve number:1 user:@Players force:true — *(approve · under spin-off this STAGES them on the listing until you launch · force past a hard cap)*

(one quest at a time)
a player may hold only one seat: approving someone already on a live run is refused, and a launch leaves them an applicant rather than double-booking them

/quest party kick number:1 user:@Players — *(remove a member or applicant)*

/quest run start number:1 — *(lock the party, mark in progress)*

/quest run start number:1 (listing)
the launch: the whole staged group becomes one run with its own thread and clock — or press on the post

/session add name:X [run:] user:@Players
seat a player on a run — name autocompletes, running ones first; run blank = the latest active one. On an instance it is your word: a sheet and a pulse required

(naming a run)
paste the thread's own name if you like — the number prefix and "Run 001 …" suffix are ignored. In a run's own thread you may leave name: blank entirely — it means that very run

/session kick/rally/note/pause/resume/show/thread
the in-play leaves, for ANY run that is going — a board run, an encounter, a chapter, an older quest. Most forward into /quest and behave as there; thread opens the room itself, for a run that has none. Only show is open to everyone — the rest are a GM's

/session complete [summary:] [title:]
pay out and write the chronicle. Leave summary: blank and a summary drafted from the log is offered: use it, edit it, or end without one

(run names) — *(every launch is christened "<Quest> Run 001 <GM>" — the thread and the ledger wear the same name)*

/quest thread number:1 · /quest thread all:true
open a quest thread for one that hasn't got one. Use it for quests that started before the instance forum was set — all:true catches every running quest at once. Anything that already has a room is left alone

/quest handoff number:1 gm:@GMs
pass a quest to another GM — they become its DM. The board, the book, the planning thread and the party's room are all told

Several GMs, the Same Adventure

A quest holds one party on one clock, so two Game Masters cannot share a quest number. **/quest instance** makes a separate run of the same adventure: it copies the writing — name, lore, objectives, details, rewards, merit and party rules — and leaves everything else fresh. A new number, an empty party, a clock at zero and its own log.

/quest instance number:1 [label:Blackfen party]
run your own copy of an adventure. The copy keeps the ORIGINAL's number and adds which run it is — #002.2-Testing the waters · Blackfen party — so the board reads as one story with several tables. Fresh party, clock at zero, you as its DM

/quest instance number:1 gm_style:Roleplay-focused *(and advertise how you run it)*

Three Game Masters can run the same adventure at once, each with their own party, channel, clock and summary. Completing one does nothing to the others. The board marks them: One of 3 separate runs of this adventure.

Running a Quest — the Clock

Starting a quest with **/quest run start** begins a stopwatch. From then on the bot posts a public time check in the quest's run channel **every 15 minutes**, and **on the hour** a recap of everything that happened during it. Set the channel first with **/quest runchannel**, or there is nowhere for them to go.

/quest run start number:1 *(the clock begins)*

/quest run note number:1 text:They bribed the gatekeeper kind:Roleplay *(mark a moment)*

/quest run timeline number:1 *(the whole log so far)*

/quest run ready number:1
a ready check: one card with a tick per seated player and a Ready button — each press turns their tick; the last says all ready and names you, and on a run not yet started turns the button into Start the run — your press is /quest run start

/quest run pause number:1 *(stop the clock, keep the time)*

/quest run resume number:1 *(carry on where it left off)*

/quest run complete number:1 *(stop, award, and write it up)*

A timeline reads back like a ship's log:

```
` 0h 00m` Quest begins — 4 on the party
` 0h 15m` Time check — 0h 15m
` 0h 17m` Garrick speaks
` 0h 44m` Artorius wins the fight
` 1h 00m` Hourly recap — 3 events
```

Combat and roleplay log themselves. A fight ending in the quest's run channel, or an NPC speaking there through **/npc say**, is attached to whichever quest is running in that

channel. Anything else you want on the record goes on with **/quest run note**, taggable as roleplay, combat or a plain note.

Pause keeps everything. *The time already run is banked and the clock stops — a paused quest gets no reminders and logs nothing. Resuming picks up at exactly the same figure. Both counters live on the quest itself, so a restart or redeploy mid-session resumes rather than starting the count again.*

`/quest runchannel number:1 channel:#thread`	*(set where it runs & rewards)*
`/quest rally number:1 [message:] [here:true]`	*call the party together — pings every member in the quest thread (or in this channel with here:true), with your message and a line naming their DM*
`/quest run note number:1 text:... public:true`	*(log a moment — planning-thread mirror by default; public:true posts it in the board thread too)*
`/quest run recap number:1`	*drafts a "previously on…" from everything logged — private to you; add post:true to read it to the party (GM)*
`/quest npc number:1 name:Hollow Lieutenant`	*(attach the NPCs a run involves (remove:true to detach) — they appear on the completion run record)*
`/quest runs number:1`	*the run ledger for a quest and all its instances: how many times it has been completed, and each run's date, GM, party and NPCs*

Initiative and the Turn Clock

/session initiative puts a sign-up card in the channel. Players press **Join**; you add NPCs and foes with **Add NPCs** — a picker of those heard there lately, or words: **Goblin x3** steps out three temporary copies, **category:Bandits** brings a whole category, and a name with no NPC behind it rolls d20 + 0. **Close & roll** rolls d20 + DEX for everyone (the modifier on a 5e server), rerolls ties among the tied, and sets the order. In a run's thread the party is pinged to the card.

Then a turn at a time: each turn posts a card pinging whoever it is — the GM role for an NPC — with **Done**, **Skip**, **Pause** and **End**. Done is theirs or yours; the rest are yours. The rounds are counted, and a run going in the channel keeps the order rolled, each round, every skipped or timed-out turn and the end on its timeline and in its record. One order a channel; while a fight runs there, the order waits.

`/session initiative players:@Artorius npcs:Goblin x3`	*(the sign-up card, four in already)*
`/session turn`	*(the order here — for anyone)*
`/session turn action:next`	*(Done — for whoever's turn it is, or you)*
`/session turn action:add who:@Meliora`	*(a newcomer rolls and takes their place by total)*
`/session turn action:remove who:Goblin 2`	*(out of the order)*

`/session turn action:back`	*(one turn back, for a slip of the finger)*

The turn clock runs every initiative order and every fight. A turn quiet for **5 minutes** gets a reminder with a **Still writing** button; at **15** it passes. Typing, a message or any press from the one it waits on starts the count again. In a fight the quiet turn is skipped — or, with **timeout:auto**, the bot attacks for them: at whoever they last swung at if still standing, else the weakest foe standing, with their best permitted stat. A defence is never skipped; the bot rolls it and the exchange resolves. With the other side all down, a quiet fighter is skipped, never set on a friend. A whole round gone by with nobody acting stops the clock, and it says so, until someone stirs; a fight or an order already quiet six hours past its mark is left alone. A paused run holds the clock.

`/session clock remind:10 skip:30`	*(this channel's clock — a slower table)*
`/session clock timeout:auto`	*(a quiet fighter's attack is rolled for them)*
`/session clock reset:true`	*(back to the server's clock)*
`/config mechanics turnclock remind:5 skip:15`	*(the server's clock (Admin); 0 turns either off)*

The Quest Summary

On **/quest run complete** the clock stops and the whole run is written up: who ran it, how they run a table, how long it took, who was on the party, and the full timeline. Set where it goes with **/config channels questlog channel:#chronicle**.

`/config channels questlog channel:#chronicle`	*(where finished quests are written up)*
`/config channels questlog disable:true`	*(stop posting them)*

The summary is then **linked on every party member's standing page — /char view standing** and **/char view show full:true** both list the quests a character has finished, each one a link straight to its write-up, with how long it took and how long ago it was.

Ending a Run

`/quest run winddown number:1`
the story is over but the rewards are not settled: the run stays live, its party is released to the rests and free to join other quests, and anyone kicked now is still paid at completion. resume:true puts it back (GM)

`/quest run complete number:1`
finish — auto-award merits, list rewards. The run's story rides on the card as a scroll PDF in the server's scroll font: the party, the length, every logged beat with its roleplay words, your tale — woven, so /gm scroll can unfurl it again anywhere

`/quest run complete number:1 summary:…`
add your telling — it lands in each adventurer's thread in quest-chronicle; timings, events and payouts go to the GM-only gm-quest-log instead

`/quest run log number:1 text:…`
write or rewrite the tale afterwards — it is mirrored into every adventurer's own chronicle thread, and rewriting edits each copy in place (GM)

(↩ Reopen, on a completion message)
five minutes to take a completion back: payout reversed, this run's titles revoked, party released; fix it and complete again (GM)

(reviews)
a completed run posts a review button in its own thread; `/quest show` then carries the count, the average and the latest few lines (GM)

/quest archive number:1 summary:…
the final shelf. Blank summary: opens a box for the final word — it goes on the record, into the run's thread and the GM quest log, and marks the campaign card. A completed quest stays completed on everyone's record (GM)

/quest delete number:1
remove a quest permanently: its board thread or post and its planning thread (applications and notes included) and the party's room are deleted with it — and any instances of it go the same way, threads and all. A fight still running in the room is stood down first. If the quest is live, the confirmation says so before you commit: the clock stops and the party is released. Its number returns to the pool: the next quest created takes the lowest free number, reborn with a clean history (the run ledger keeps counting for DM credit but no longer answers to that number)

GM Style

A quest can advertise how its Game Master runs a table, so a player knows what they are applying to. Set it on **/quest create** or per instance; it shows on the quest card, the board post and the final summary.

Tag	What it promises
Mechanics-focused	rules, rolls and tactics to the fore
Roleplay-focused	character and conversation to the fore
Mixed elements	a bit of both
Combat-heavy	expect fighting
Puzzle & investigation	problems to work out
Sandbox	the players decide where it goes

Instances — Runs Opened Without the Board

/instance opens a run with no listing and no applications, in three kinds — **as:** says which. An **encounter** is a session on the fly. A **chapter** is a numbered part of a campaign — it needs **campaign:**, and **part:** is the next number if you leave it blank. A **legacy** run picks up a quest that began before the bot: **started:** says when, **played:** how long it has already been played (**6h**, **2h30m**, **90m**) — banked into its clock, so its runtime counts the sessions before the bot — and it pays only the merits you set. All three are the same thing underneath, so everything that works on one works on all.

/instance start name:… [as:] merits:2 campaign:…
the bot lists every living character with HP and what holds them; tick who is in it and press Open — it opens its own thread in quest-instances, the party pulled in by mention. No Join button, ever (GM)

`/instance start name:The Siege as:chapter campaign:…` — *(Part 4 of the campaign, numbered for you; its card and the campaign card both say so (GM))*

`/instance start name:… as:legacy started:12/09 played:6h merits:3` — *(a quest from before the bot, on the books at last, its six hours already played on its clock (GM))*

`/instance start quest:7 record:true`
adopt a board quest that is already running: it gets its room if it has none, and the recording switch (GM)

`record:true`
on start or adopt: every message typed in the run's own thread goes into its log as table talk. An edit corrects its line and keeps the first wording; a deletion marks it. At the end the corrected transcript rides with the story for everyone, the raw one — as first typed — goes to the GMs. Counted in the GM record, left out of the hourly recap. Typed rolls stay in the roll log. A run with no thread of its own is not recorded. Off unless you say so

`/session add · /session kick` — *(the seats are yours: in its thread, or by name: (GM))*

`/session complete [summary:] [title:]`
pays out, writes the chronicle, posts the review button — the ordinary completion; blank summary: offers one drafted from the log (GM)

`/instance list` — *(every run going now, its kind, where, and its time so far)*

`/instance preset save name:… merits:2 npcs:Hollow x3`
a saved scene; `/instance start … preset:` runs it with the merits set and the monsters summoned as temps; `preset list` · `preset remove` (GM)

*An instance left quiet for six hours pings the GM roles in its room; it never ends itself. A preset's **npcs:** are summoned from the 5e library where there is one — and where there is not, an NPC of that name is cloned as temporary fighters, so **Hollow x3** works on a Knightfall server from a single Hollow you made once.*

Campaigns — the Long Arc

`/campaign create name:… description:…`
the long arc: quests and encounters under one name, with a GM-only thread and a live card. add · remove · note · status · recap · complete; `campaign:` on `/quest create` and `/instance start` links at birth; `as:chapter` numbers the parts (GM)

`/campaign add campaign:… quest:2` — *(link a quest that already exists — old ones too)*

`/campaign add campaign:… quest:12 part:3` — *(an instance becomes Part 3 of the campaign; unlinked again, a chapter is an encounter (GM))*

`/campaign note campaign:… text:…` — *(a beat that happened between runs)*

`/campaign status campaign:… text:…` — *(where things stand — the present, not the history)*

`/campaign recap campaign:…` — *(a previously-on across every linked run)*

`/campaign complete campaign:…`	*(close the arc)*
`/campaign show campaign:…`	*(players see the premise, what is done and their own part; GMs see everything)*

Stalled Work and the Weekly Digest

`/gm check stalled`
what is waiting on a GM: winding-down runs, quiet encounters, staged parties never launched, idle campaigns, reviews this week, targets standing over a day (GM)

Once a week the same report is posted on its own, as a thread in the **gm-digest** forum titled by the Monday of the week it covers — so nothing depends on somebody remembering to ask. A quiet week posts too, saying so; the first boot with the forum posts the week's digest at once.

Feedback Rooms

`/button feedback`	*(plant a feedback button in this channel (GM))*
`/feedback category add|remove|list`	*(the rooms feedback lands in — seven to begin with; add your own and its thread opens at once (GM))*
`/feedback category list`	*(every room feedback can land in)*
`/feedback category remove name:X`	*(retire a custom room (GM))*

Standing

A milestone-style progression system. Merits are a lifetime tally a Game Master awards; ranks are named tiers with merit thresholds. The bot tracks progress and flags eligibility, but every promotion is decided by a Game Master.

Merits

`/standing merit view`	*(your merits, rank, and merits to next rank)*
`/standing merit view user:@Players`	*(view another player)*
`/standing merit leaderboard`	*(top earners on the server)*
`/standing merit add user:@Players amount:2`	*(award merits — Game Master)*
`/standing merit remove user:@Players amount:1`	*(take merits away — Game Master)*
`/standing merit set user:@Players amount:10`	*(set an exact total — Game Master)*
`/standing merit history user:@Players`	*(a player's merit timeline)*
`/standing merit history`	*(recent server-wide merit activity)*

Ranks

`/standing rank list`	*(all ranks and their thresholds)*
`/standing rank add name:Knight threshold:5`	*(create or update a rank — Game Master)*
`/standing rank add name:Squire threshold:0 order:0`	*(order sets junior→senior — Game Master)*
`/standing rank promote user:@Players rank:Knight`	*(set a player's rank — Game Master)*
`/standing rank strip user:@Players`	*clear their held rank — merits and renown stay, so they can re-claim whatever they still qualify for (GM)*
`/standing rank eligible`	*(who has met a threshold but isn't promoted — Game Master)*
`/standing rank remove name:Squire`	*(delete a rank — Game Master)*

/standing merit view *shows current merits and exactly how many more are needed for the next rank, e.g. "Knight · 7 merits · 8 to Paladin". Every merit change is recorded — quest rewards show the quest name, manual changes show "by GM" — so* ***/standing merit history*** *answers "who earned what, and when". Removing a rank doesn't change players who already hold its label.*

Titles & Associations

A title is a name earned — granted by a Game Master, or carried away by every survivor of a quest that offered one, stamped with where it came from. An association is a company, order or cause a character stands with. Both show on the character's page.

`/standing title list user:@Players`	*(the titles they hold)*
`/standing association list group:The Falconers`	*(who stands with a company)*
`/standing title grant user:@Players title:… source:…`	*(award a title — it shows on their page, their NPC sheet if they are one, and their roll card (GM))*
`/standing title revoke user:@Players title:…`	*(take one back (GM))*
`/standing association add user:@Players group:… note:…`	*(the company, order or cause they stand with (GM))*
`/standing association remove user:@Players group:…`	*(they part ways (GM))*
`/quest run complete number:1 title:…`	*(every survivor earns the title, stamped with the quest it came from (GM))*

Renown

Renown is not a currency. It is a running tally of how a character **stands in the world** — what they have done, who has noticed, and how far their name carries. It is earned from quests, encounters and activities, and it is not meant to be traded away for goods. Someone with high renown is **known**; that is the whole of it.

A Game Master can adjust it either way when the story calls for it — a reputation can be damaged as well as built — but it is a record of standing rather than a purse.

`/standing renown view user:@Players`	`/standing renown view`
`/standing renown leaderboard`	*(who is best known)*
`/standing renown history`	*(where a standing came from)*
`/standing renown gain user:@Players amount:5 reason:Cleared the Sunken Vault`	*(Game Master)*
`/standing renown loss user:@Players amount:3 reason:Disgraced at court`	*(Game Master)*
`/standing renown set user:@Players amount:0`	*(Game Master)*

Every change is logged with its reason, so **/standing renown history** answers how a reputation was built and where it was lost.

Merit

Merit is the earned measure of service — awarded by a Game Master, accumulated across quests and activities, and the thing rank thresholds are set against. Unlike renown, **merit is tradeable**: it can be passed between players, and potentially to and from NPCs, as payment, tribute, a debt settled or a favour bought.

`/standing merit give user:@Players amount:2 reason:A debt settled`	*(offer some of your merit)*
`/standing merit trades`	*(what is still waiting on a Game Master)*
`/standing merit cancel id:3`	*(withdraw one — your own, or any as a Game Master)*

No merit moves until a Game Master signs it off. An offer is held and posted to the sheet approval channel with Approve / Refuse buttons; a refusal asks the Game Master why and passes the reason back. Both parties are told when it lands, and it is announced in the channel where it was offered so the table sees the trade happen.

Your balance is checked twice — when you offer, and again when a Game Master approves. If you have spent the merit in between, the trade is voided rather than pushing anyone into the red.

Renown says who you are in the world. Merit is what you have earned and may hand on. A character can be widely known and hold no merit at all, or quietly hold a great deal.

◈

Activities and Quizzes

An activity is a minigame you write for your server: the bot narrates, asks for rolls, branches on the results and loops until someone stops. Fishing, foraging, a gauntlet in the training yard — whatever you script. Only a Game Master can write one; whether players can **start** one is a setting.

Running One

`/activity run name:Fishing [player:@Players] [party:@A @B]`
start an activity here. Name a player and it runs for THEM — their name on it, their buttons, their score — which is how you set a quiz for someone to sit. party: names several, who press in turn (GM only). Several runs can go at once in one channel; each answers only to its own player

`/activity list`	*(what exists — and, if the server has one, the pinned board lists them with a ▶ Play button each)*
`/activity scores name:Fishing`	*(best score per player, and how it has been played)*
`/activity stop`	*(abandon the run here — /activity run while mid-way shows you where you are instead)*

`/activity demo which:Kalidale Lore [player:@Players]`
play a built-in activity — the fishing tale or a five-question lore quiz. Name a player and it runs for THEM, so you can hand someone a quiz to sit; nothing is awarded either way

`/activity create`	*(write one — a paste window, or file: a .txt for long scripts (Game Master))*
`/activity show name:X` **`/activity edit name:X`**	*(the map of one, and a box to change a scene (Game Master))*
`/activity delete name:X`	*(remove it (Game Master, asks first))*
`/config mechanics activities players:true`	*(let players start them too)*
`/config channels activityboard channel:#games`	*(pin a board of them with Play buttons (Game Master))*

/activity demo plays a ready-made fishing game so you can see the whole system working before writing anything: a difficulty check that loops with a different excuse each time, four sizes of catch chosen by the roll, a gauntlet per size, natural 20s and 1s, and buttons to keep going or head back. It awards **nothing** — no renown, no merits, no items — so it is safe to play with.

One Run Each — or a Party

An activity run belongs to the person who started it. Several people can play in the same channel at once, each with their own prompts, their own progress and their own rewards — and one person stopping or wandering off does nothing to anyone else. Every post is tagged with whose run it is, and a button only answers for its owner. A run left untouched for a week is put away on its own.

`/activity run name:Fishing`	*(start your own run)*
`/activity run name:Fishing party:@Meliora @Dain`	*(one run for the three of you)*
`/activity stop`	*(end yours — a Game Master with none running can clear the channel)*

A **party** run is one tale for everyone named: you press **in turn** (the card says whose turn it is, and a press out of turn is refused by name), the tally is one shared pot, and the ending

pays **every** member — merits, renown, a title, all of it. Each roll uses the presser's own sheet.

Some activities carry rules of their own: **once per day** or week per player, days of the week they run on, a title or a standing you need to start them, and endings that pay **once** — a second finish is still a finish, just not a payday. The refusal says which, and when you can go again.

Answering a Scene

Press the button, or **type the stat and add your own flavour after it** — both roll the same thing, but typing lets you say what your character is doing.

```
wis I survey the reeds where the current slows      (rolls WIS, prints your words)
```

A typed roll only answers the scene if the stat is one that step accepts; anything else falls through to an ordinary roll, untouched. Your stats are shown alongside the result either way.

A Second Chance

After a roll the tale **waits** rather than moving straight on. If you have a reroll to spend you are offered one, alongside a **Carry on** button:

```
Reroll (2 left)                    (spend one and roll again)
▶ Carry on                         (take the result and continue)
```

Only one reroll is offered per roll — the second result stands, and the tale moves on. If you have none left, or the scene was an ending, it continues as before without stopping to ask. Your progress is saved while it waits, so nothing is lost if you take a moment to decide.

*In **/activity demo** the reroll is **free** and always offered, even with none left — a dry run should not quietly cost a player their real rerolls just to see what the button does.*

Each scene posts with a button per stat it accepts. A press rolls with the presser's own sheet, honours a Hero's signature stat, and lands in the roll audit like any other roll. Writing and deleting always need a Game Master; starting one is GM-only until **/config mechanics activities players:true**.

Quizzes

A quiz is an activity a Game Master sets from the question bank: a question, then a button per answer — or a box to type into — marked right or wrong on the spot, with the explanation after, and a score at the end. The bank prefers questions you have never been asked, so a second sitting is a different quiz.

Writing One

/activity create opens a box for your script — **template:** starts it from a worked example with the guidance in comments; long scripts (over 4000 characters) travel as an attached **.txt** on its **file:** option instead, or as the PDF from any shelf. Pasting the script straight into any channel the bot can read works too, as does posting it in the activity's thread on the shelf. Every route is the same: the script starts with **[ACTIVITY] Name**, re-using a name replaces that activity, and the whole thing is checked before anything is saved. **/activity write name:** builds one scene by scene in boxes instead, no grammar to learn; **/activity**

grammar is the cheat sheet, a screen at a time.

What Happens When You Save

Since 20/10 the bot **keeps the script**. A script that parses goes live at once — unless someone is mid-run in it, when it waits as a **draft** until you press **Publish** (or they finish). A script with problems is kept as a draft too, **every problem listed with its line and the fix**, so nothing you typed is lost: open it on the shelf or with **/activity edit** and mend it. **draft:true** on create holds a good script back on purpose, to practise first. The version before each publish is kept, so **Revert** swaps back.

`/activity edit name:X scene:find`	*(that scene's block in a box; blank scene: the whole script)*
`/activity practice name:X`	*(a dry run — nothing paid, free rerolls, buttons that force the die: nat 1, fail, pass, nat 20)*
`/activity publish name:X` `/activity revert name:X`	*(the waiting draft goes live; back to the last version)*
`/activity copy name:X as:Y` `/activity rename name:X to:Y`	*(a copy held as a draft; a new name)*
`/activity export name:X`	*(the script as a .txt and a parchment PDF that carries it)*

`/activity show name:X [script:true]`
the map: every scene, what it asks, where it goes, the odds per roll for this table; script:true adds the text

The parser also **notes** what will run but probably not as meant: a scene nothing reaches, a loop with no way out, a roll with only half its outcomes, a tally never cashed, a DC nobody at the table could meet, a voice that is not an NPC, and a line that **reads as narration but looks like a keyword mistyped** — *PASSS -> ford* used to vanish silently into the story text. Notes do not stop a save; they sit on the card. Lines beginning with **#** are comments and are ignored.

The Shelf

Give the server a **Forum** and run **/config channels activityshelf channel:#activity-shelf**: every activity gets a thread there — a card on top (state, scenes, the odds of each roll for this table, notes, the figures from play), the script in code blocks under it, and a parchment PDF that carries the script woven in, so dropping it into **/activity create file:** on any server brings the activity with it. The card's buttons: **Edit scene**, **Edit all**, **Practice**, **Publish** and **Discard draft** when one is waiting, **Revert**, **Retire** (off the board, runs ended, thread archived; **Restore** brings it back). Post a script, a .txt or the PDF in the thread and it replaces the activity; a new post in the forum starting **[ACTIVITY]** makes a new one. The three demos sit there read-only as worked examples, the tutorial among them. Discord's tag filter sorts the shelf: live, draft, retired, quiz, story, gauntlet, rewards, open, demo. GM eyes only — scripts hold the answers, which is also why **/activity show** is a GM command now.

The Board

/config channels activityboard channel:#games pins a message listing every live activity with a ▶ **Play** button each, redrawn as activities are published and retired. A press starts the activity for whoever pressed — following the server's setting, so on a GM-led server it says to ask one.

Figures From Play

Every run is logged — starts, rolls and their bands, choices, endings, quits — and kept ninety days. The shelf card and **/activity show** read it back: runs and finishes, where players stopped, which rolls fail more than six times in ten (the DC may be high). **/activity scores** ranks the best tally or quiz score per player. The weekly chronicle ends with the week's activities and its best score; the GM digest lists every draft still waiting on a GM.

```
[ACTIVITY] Fishing
TALLY renown                                  (a running total, paid out at the end)

SCENE find
SAY Find a spot to set up.
ROLL wis DC15                                 (a difficulty to beat)
  PASS -> cast
  FAIL ONE OF                                 (picks a different line each loop)
    This spot does not look all too lucky...
    They are not biting here today...
  FAIL -> find                                (loops back)

SCENE cast
ROLL str|dex|wis                              (the roller picks the stat)
  1-5   Small fry.  -> fight_small            (ranges on the total)
  16+   A monster!  -> fight_extra

SCENE fight_big
GAUNTLET str|con 14 12 10                     (three rolls, each harder to fail)
  NAT20 It leaps aboard. -> caught
  NAT1  Your line snaps. -> restring
  PASS -> caught
  FAIL -> find

SCENE caught
GAIN renown 3                                 (banked on arrival)
CHOICE                                        (buttons, no dice)
  Carry on      -> cast
  Call it quits -> depot
```

```
SCENE depot
END TALLY                                   (pays the tally out as renown)
```

What Each Line Does

Line	Meaning
SCENE name	A step. The first one is where a run begins.
SAY ...	Narration. Runs over as many lines as you like.
AS Garrick	Speak this scene in an NPC’s voice, through their webhook.
ROLL str	Ask for a roll. str|dex|wis lets the roller choose.
ROLL wis DC15	Beat 15 for PASS, else FAIL.
GAUNTLET str|con 14 12 10	A run of rolls, each with its own DC. All must pass.
GAUNTLET 14:str 12:str|con 10:dex	The same, but a different check at every step.
1-5 text -> scene	Branch on the roll total. 16+ is open-ended.
PASS / FAIL text -> scene	Branch on the outcome band.
BAND ONE OF	Indented lines below become random variants.
NAT20 / NAT1 text -> scene	Overrides everything else.
CHOICE	Buttons instead of dice. Options are label -> scene.
TALLY renown	Names a running total, declared once at the top.
GAIN renown 3	Adds to the tally when a player arrives at this scene.
ROLL wis DC easy	The DC is set from this table’s sheets: easy, normal, hard.
SET torch / UNSET torch	A flag remembered for the rest of the run.
IF torch -> scene	Checked on arrival; also not torch, tally>=5, merits>=10, title:X.
NEXT adv / NEXT dis	Tilts the next roll in this run.
RANDOM -> a|b|c	A scene that only routes, at random.
IMAGE https://.../pic.png	A picture on the card.
QUIZ FROM lore 5 -> next	Five questions drawn from the bank, as scenes.

Line	Meaning
END	Finishes. END TALLY pays out, merits:2 awards merits,
	rewards:a silver key is announced for you to hand out,
	title:Angler grants a title, heal:1 a heal charge, quest:text
	notes the running quest, once pays only the first finish.

Without a **DC** or ranges, outcomes fall back to the same bands a **?** check uses: **CRIT** a natural 20, **PASS** 15+, **PARTIAL** 10–14, **FAIL** under 10, **FUMBLE** a natural 1. You need not define all of them — a crit falls back to PASS, a fumble to FAIL.

*Validation refuses a branch pointing at a scene that does not exist (and suggests the nearest name), a duplicate scene name, a scene with no roll, choice, route or ending, a roll on something that is not a stat, more than five choices, a gauntlet longer than eight, and a **GAIN** with no **TALLY** — every problem at once, each with its line and the fix, so a run can never dead-end. A refused script is kept as a draft with the list on its card.*

The Anatomy of a Script

The table above is the quick reference; this is the long walk. Each part of a script, what it does at the table, and the shapes it can take — every example below is a working fragment you can lift.

The Header

```
[ACTIVITY] Fishing                    (the first line — everything above it is ignored)
```

A script begins at **[ACTIVITY] Name** and the name is how everything else refers to it — **/activity run name:Fishing**, **/activity show**, **/activity edit**. Writing a script with a name already in use **replaces** that activity — at once, or as a waiting draft if someone is mid-run. (**[STORY]** is accepted as an older spelling of the same header.)

```
TALLY renown                          (a running total, paid out by END TALLY)

QUIZ tally                            (how questions are marked: tally, retry, silent)

ONCE per day                          (a cooldown per player: day or week)

AVAILABLE Fri-Sun                     (the days it can be started (UTC); weekends, weekdays)

REQUIRE title:Angler                  (who may start it: a title, merits>=10, renown>=50)

# a comment                           (ignored, anywhere in the script)
```

Those lines sit between the header and the first scene. **REQUIRE** gates starting; a scene-level test is **IF**, below. Keywords are written in **capitals**: a keyword line in capitals

must be well-formed (a malformed one is a problem, with the fix); in lower case it counts only when it is exact — *end*, *gain renown 1*, *set torch* — so a bare line beginning *As the sun sets* or *Roll with it* stays narration, and under **CHOICE** any *label -> scene* is a button whatever it starts with. Scene names are twenty characters at most.

SCENE — the Steps of the Tale

```
SCENE find                          (a step, named)
  ...
SCENE cast                          (the next — order on the page does
                                     not matter)
  PASS -> cast                      (branches name their destination)
```

A scene is one step: it narrates, asks for something — a roll, a choice — and branches. **The first scene in the script is where every run begins**; after that, order on the page means nothing, because movement is only ever by name: **-> cast** goes to **SCENE cast** wherever it was written. Names are single words, and every branch must point at a scene that exists — validation refuses the script otherwise, so a run can never walk off the map.

SAY — Narration

```
SAY You survey the area for a likely spot,
reading the water for the promise of fish...   (bare lines continue the narration)
```

Whatever follows **SAY** is spoken by the bot when a player arrives at the scene, and it runs over as many lines as you like — a bare line under a SAY simply continues it. Emoji, **bold** and *italics* come through as typed.

AS — an NPC's Voice

```
SCENE stall
AS Garrick                          (this scene speaks through Garrick)
SAY Fine steel, fair prices. What are you after?
```

Give a scene an **AS** line naming a registered NPC and its narration is delivered through that NPC's webhook — their name, their avatar — exactly as **/npc say** would. The rest of the scene (the roll, the buttons) behaves as normal; only the voice changes.

ROLL — Asking for Dice

```
ROLL wis                            (one stat — outcome read off the
                                     bands)
ROLL str|dex|wis                    (the roller chooses which to use)
ROLL wis DC15                       (a difficulty: 15+ is PASS, under is
                                     FAIL)
```

A scene with a **ROLL** posts a button per stat it accepts; pressing one rolls **1d20 + that stat from the roller's own sheet**, honouring a Hero's signature advantage and landing in the roll audit like any other roll. Offer several stats with **|** and the choice belongs to the player — a climb might take **str|dex**, brute force or nimbleness.

Typing answers too: **wis** alone, or **wis I read the currents where the reeds thin** to roll and roleplay in one breath — the flavour is printed with the result. A typed stat only answers the scene if it is one that step accepts; anything else falls through to an ordinary roll and the tale keeps waiting.

With a **DC**, the total decides: meet or beat it for **PASS**, fall short for **FAIL**, and only those two bands apply. Without one, the outcome falls onto the full five-band ladder described under Outcome Bands below.

Ranges — Branching on the Number Itself

```
ROLL str|dex|wis

  1-5   Something small brushes the line. ->
fight_small

  6-10  A decent weight takes the bait.   ->
fight_medium

  11-15 The rod bends hard.               ->
fight_big

  16+   The reel screams. Extraordinary!  ->          (open-ended top)
fight_extra
```

Instead of bands, a roll can branch on the **total itself** — each line gives a span, the text to speak, and where to go. **16+** is open at the top. Ranges make graded results natural: the same cast, four sizes of fish. A natural 20 or 1 still overrides a range if a **NAT20** or **NAT1** line is present.

GAUNTLET — a Run of Rolls

```
GAUNTLET str|con 14 12 10                  (three checks: DC 14, then 12, then
                                            10)

GAUNTLET 14:str 12:str|con 10:dex          (or a different test at every step)

  PASS -> caught                           (all steps passed)

  FAIL -> find                             (any step failed)
```

A **GAUNTLET** is several rolls in a row and **all of them must pass**. The first shape names the stats once and lists the DCs; the second gives each step its own DC and its own stats, so a chase can open on raw speed and end on wits. Eight steps is the ceiling. The scene's **PASS** branch fires only when the whole run is survived; **FAIL** fires at the first stumble — and a **NAT20** or **NAT1** on any step can cut straight out of the sequence.

Outcome Bands — CRIT, PASS, PARTIAL, FAIL, FUMBLE

```
ROLL wis

  CRIT    A revelation! -> shortcut          (natural 20)

  PASS -> onward                             (total 15+)

  PARTIAL You manage, at a cost. -> onward   (total 10–14)

  FAIL -> lost                               (total under 10)

  FUMBLE  Utter disaster. -> ditch           (natural 1)
```

Without a DC or ranges, a roll's outcome lands on the same ladder a **?** success check uses: **CRIT** on a natural 20, **PASS** at 15 or more, **PARTIAL** from 10 to 14, **FAIL** below 10, **FUMBLE** on a natural 1. You need not write all five — **a missing CRIT falls back to PASS, a missing FUMBLE to FAIL**, and a missing PARTIAL rides with FAIL — so the common pair **PASS / FAIL** is a complete scene on its own. Each band line may carry text to speak, a destination, or both.

ONE OF — Variety on a Loop

```
  FAIL ONE OF
    This spot doesn't look all too lucky...        (indented bare lines are the
                                                    variants)
    Not a bite. Time to move on.
    Try, try, try again!
  FAIL -> find                                     (the same band still branches)
```

A band that ends in **ONE OF** collects the indented lines below it and speaks a **different one each time** — the cure for a looping scene repeating itself word for word. The block ends at the next directive or band name, so **FAIL ONE OF** followed later by **FAIL -> find** reads naturally: varied words, one destination.

NAT20 and NAT1 — the Die Overrides Everything

```
  NAT20 It practically leaps into your hands. ->
caught
  NAT1  The line snaps. -> restring
```

A **NAT20** or **NAT1** line answers the **natural die**, before modifiers — and it beats a DC, a range, and every band. Inside a gauntlet it cuts out of the sequence on the spot. Use them for the moments that should feel like fate regardless of the arithmetic.

CHOICE — Buttons Instead of Dice

```
CHOICE
  Keep fishing   -> cast                           (label -> destination)
  Call it a day  -> depot
```

A **CHOICE** scene rolls nothing: it posts one button per line, the label as written, and pressing one moves the run to its destination. Buttons belong to the run's owner — someone else pressing yours is refused — so several players can sit in the same channel, each at their own crossroads. A scene may narrate with SAY first and then offer the choice.

TALLY and GAIN — Keeping Count

```
TALLY renown                                       (declared once, near the top)

SCENE caught
GAIN renown 3                                      (banked each time a player arrives
                                                    here)
```

Declare a **TALLY** once and the run carries a counter. Every scene with a **GAIN** adds its amount **when a player arrives there** — loop through the catch five times and it banks five times. The count is per-run and per-player, shown as it grows, and it pays out only if an ending says so; abandoning a run with **/activity stop** forfeits it. A **GAIN** without a declared **TALLY** is refused at validation.

DC by Intent, and the Odds

```
ROLL wis DC easy                    (three in four sheets pass on an average roll)

ROLL str DC normal                  (half)

ROLL dex DC hard                    (one in four)
```

Write the DC as what you **mean** and the bot sets the number from this server's sheets when the script is saved (a quarter, half, three-quarters of them, by 11 + their best offered stat), between 5 and 25. The map and the shelf card show the number it chose, and beside **every** DC roll the odds for this table: *4 of 9 sheets pass on an average roll · 54% overall*. Republish and it is reckoned again.

SET and IF — Flags, and Routing on Them

```
SCENE stair
SAY You lift a torch from its bracket.
SET torch                           (remembered for the rest of the run)

CHOICE
  Onward -> hall

SCENE hall                          (a scene of IF lines only routes)
IF torch -> lit_hall                (first match wins)
IF not torch -> dark_hall

SCENE vault
IF tally>=5 -> rich                 (the run's tally)
IF title:Angler -> greet            (a title the player holds)
IF merits>=10 -> trusted            (their standing)
```

A flag is a word a scene **SET**s (or **UNSET**s) on arrival and the run remembers. **IF** lines are checked when a player arrives at the scene, top to bottom, first match wins; a scene with nothing but IF lines routes straight through (its SAY, if any, is said on the way). A scene may test **tally**, **merits** or **renown** with **>=**, **<=**, **<**, **>** or **=**, or a **title:**. Validation notes a flag tested that no scene ever sets.

RANDOM, NEXT and IMAGE

```
SCENE cast
SAY You cast.
RANDOM -> shallows|reeds|deep          (one of these, at random)

SCENE blessing
NEXT adv                               (the next roll in this run is tilted)
IMAGE https://example.com/altar.png    (a picture on the card)
```

A **RANDOM** scene only routes — the cure for a repeatable minigame playing the same every time — and must not ask for anything else. **NEXT adv** or **NEXT dis** tilts the next roll in the run, announced on the card, spent once; a choice can now change the odds, not only the path. **IMAGE** takes a direct link to a picture.

QUIZ FROM — the Bank, in a Script

```
SCENE bank
SAY The archivist opens the book.
QUIZ FROM lore 5 -> done               (five from the lore category; any = the whole bank)
```

The scene becomes the way in — its narration, then a **Begin** button — and the questions are written as scenes after it, the last pointing at **done**. They are drawn when the script is saved; republish to draw again. Answers still land in the bank's memory of who has met what.

END — Finishing, and What It Pays

```
END                                    (the tale simply ends)
END TALLY                              (pays the counter out as renown)
END merits:2                           (awards 2 merits to the player)
END rewards:a silver key               (announced for you to hand out)
END title:Angler                       (grants a title; validation notes a new one)
END heal:1                             (a heal charge, up to the server's cap)
END quest:Crossed the ford             (a note in the quest running in that channel)
END once                               (pays only the first time each player finishes)
END TALLY merits:2 title:Angler once rewards:a fine rod   (they combine; rewards: always last)
```

A scene with **END** stops the run — after its SAY, so an ending can still speak. What follows the word is the payout: **TALLY** converts the banked counter into renown, **merits:** awards merits **automatically**, with the activity's name on the record, and **rewards:** is free text — an item, a favour, a rumour — **announced** for the Game Master to hand over by hand,

exactly as quest rewards work. All three combine on one line, in any order after END.

*The parts compose. A scene may SAY in an NPC's voice, ROLL with a choice of stats, override on the naturals, vary its failures with ONE OF, and GAIN on arrival — the fishing demo uses nearly every part in forty lines, and **/activity show name:Fishing (demo)** after running **/activity demo** reads it back scene by scene as a worked answer key. **/activity demo which:trial** plays The Scribe's Trial, a tutorial written in the grammar it teaches; its script is on the shelf beside it.*

The Writer — Scene by Scene

/activity write name:Gate asks for one scene at a time in a box: its name, what the player reads, what it asks (*wis DC12*, *str|dex*, *gauntlet str 14 12*, *choice*, *ask*, *end*), where each result goes (one per line, as you would write them under a ROLL or CHOICE), and extras (*AS Name · GAIN renown 1 · SET torch · END merits:2*). After each scene it names the scenes you pointed at but have not written and offers a button for each; when every arrow resolves, **Finish** composes the script and saves it through the same door as a paste. Problems in a scene are shown as you go.

Quizzes & the Question Bank

A quiz is an activity underneath, so everything here rides the machinery in **Activities** — buttons, scoring, handing a run to a named player. What is different is the **bank**: questions written once, kept, and drawn on for ever after. Read the walkthrough first; the rest is reference.

Running a Quiz — Step by Step

1. Give the bank a home. Make a **Forum** channel — call it anything, *quiz-bank* does nicely — then run **/config channels quizforum channel:#quiz-bank**. You only ever do this once. Questions written before you do it are still saved; they just have no posted copy yet.

2. Write your first question. Run **/quiz add category:Orders**. The category is whatever you want to group by — Orders, History, Law. Type a new one and it appears in the dropdown from then on. A window opens with five boxes:

The question	*(How many knight orders are there?)*
Answer 1	*(5)*
Answer 2	*(* 8)*
Answer 3	*(12)*
Answer 4	*(15+)*

The * marks the right answer — one star, and only one. Leave answers 2 to 4 blank and it becomes a question they *type* the answer to, with answer 1 as what you will accept. Marking is forgiving: capitals, accents, punctuation and a leading "the" are all ignored.

3. Add the trimmings, if you want them. On the command, before the window opens: **tags:** for finer sorting (heraldry, ranks — comma-separated), **difficulty:** easy, normal or hard, and **explain:** a line shown after the answer, which turns a test into teaching.

4. Check what you have. /quiz list shows every category, how many questions are in each, and a link to its thread. **/quiz show id:7** reads one back; **/quiz remove id:7** deletes

it and its posted copy.

5. Set the quiz. /quiz start on its own draws five from the whole bank for you to try. In practice you will want a few of these:

category: / tag: / difficulty:	*(draw only from part of the bank)*
count:	*(how many questions — five by default)*
player:	*(hand it to someone to sit; the buttons are theirs)*
mode:	*(tally (carry on) or retry (same question until right))*
pass: / merit:	*(how many right passes, and what passing earns)*
pool:	*(fresh first, only new, any, or revision)*
save: / set:	*(remember this draw under a name, and reuse it)*

6. What the player sees. The question, then a button per answer — or a box to type in. Each answer is marked right or wrong on the spot, your explanation follows it, and the run ends with a score: **Score: 4/5 (80%)**, and whether they passed.

*A draw normally prefers questions that player has never been asked, so a small bank still feels fresh. **pool:Revision** flips that on its head and asks only the ones they got wrong before — which is how you send someone away to learn and then test the same ground.*

7. Do it again next week. Add **save:Induction** the first time, and after that **/quiz start set:Induction player:@Players** repeats the whole thing — same filters, same count, same pass mark — with fresh questions drawn each time.

The Question Bank

Questions can be banked once and drawn on for ever after. **/quiz add category:Orders** opens a window with five boxes — the question, then up to four answers — and a * in front of an answer marks it correct. Fill only the first and it becomes a typed question with that as the accepted reply. Add **tags:** for finer sorting, **difficulty:**, and **explain:** for a line shown after the answer.

Set **/config channels quizforum** and the bank gets a readable home: a thread per category, opened as questions are written. The forum is a copy for reading — the bot keeps its own, which is what makes a draw instant and the dropdowns possible.

/quiz add category:Orders tags:heraldry	*(write one — a window opens)*
/quiz list [category:] [tag:]	*(what is in the bank, and where)*
/quiz show id:7	*(read one in full)*
/quiz remove id:7	*(delete it, and its posted copy)*
/quiz start count:10 category:Orders pass:8 merit:1	*(draw ten from Orders; eight right passes and earns a merit)*
/quiz start set:Induction player:@Players	*(set a saved draw for a named player)*

```
/config channels quizforum channel:#forum        (where the bank is posted to read)
```

A draw prefers questions that player has never been asked, and only repeats when the bank runs dry. Both the order of the questions and the order of the answers within each are shuffled, so nobody learns that the answer is always B. **mode:** chooses tally or retry, **pass:** sets how many right counts as a pass, **merit:** is what passing earns, **player:** hands it to someone to sit, and **save:** remembers the whole draw under a name to set again later. **pool:** decides which questions they may be asked at all — fresh first, only ones new to them, any at all, or revision: only the ones they got wrong before.

Quizzes

An activity can ask questions and mark the answers. **ASK** makes a scene a question, **ANSWER** lists what counts as right (separate several with |), and **RIGHT ->** and **WRONG ->** say where each outcome leads. The player types their answer into a box, so a quiz can want words rather than a pick from four. Marking is forgiving: capitals, accents, punctuation, extra spaces and a leading “the” or “a” are all ignored. The score is kept and read out at the end.

```
[ACTIVITY] Kalidale History
SCENE q1
SAY Who founded the White Order?
ASK                                   (the player types their answer)
ANSWER Artorius|Artorius of Lyssa     (any of these count)
HINT He is still with us.             (shown under the question)
RIGHT -> q2
WRONG -> q1                           (send them round again, or onward
                                       — your call)
```

Multiple choice works too: put a * in front of the right option in a CHOICE block and the engine marks it. **QUIZ tally** lets every answer carry on and reads the score out at the end; **QUIZ retry** sends a wrong answer back to the same question until they get it; **QUIZ silent** tells them nothing as they go — each answer is simply recorded — and marks the whole paper at the end, question by question, with your explanations under the ones they missed. Set it on the script, or pick it with **mode:** on /quiz start. Try it with **/activity demo which:Kalidale Lore** — five questions, built in.

```
QUIZ tally                            (or QUIZ retry, at the top of the
                                       script)
SCENE q1
SAY How many knight orders are there?
CHOICE
  A — 5 -> q2
  * B — 8 -> q2                       (the star marks the right answer)
  C — 12 -> q2
```

Scrolls, the Bot's Voice, and Fixing What Was Said

Scrolls

`/gm scroll`
a modal for title and body; posts the parchment as an image everyone can see plus a PDF with the writing woven invisibly inside — the PDF survives Discord, so scrolls travel between servers on their own. file: hands any scroll PDF back: plain text out, plus a readable edition in standard type as image and woven PDF. A file-name field on the modal names both files for archiving; the readable pair inherits it

`/config mechanics scrollfont font:<file>`
store an .otf/.ttf — the face /gm scroll props are written in; the reply renders a sample line to prove it

`/config channels scrollarchive`
a library for every scroll's named PDF — point it at a FORUM and each GM's scrolls file in their own thread, opened automatically on first use; a plain channel keeps the flat archive

`/config channels gmarchive forum:#gm-run-archive`
the GM run archive: a thread per GM, headed with their runs, hours by kind and what is running now, its time so far; a post per finished run — runtime, party, payout, titles, the record, the story and record PDFs and both transcripts. A review of the run answers its post. Set once, it files every run already finished, oldest first; disable:true stops it

`/gm scroll file:<pdf>` — *(read a scroll PDF back as text, and unfurl a fresh copy in this server's font)*

Speaking as the Bot

`/dd message:… header:… user:@Players channels:#one #two`
speak AS THE BOT — so a GM who also plays a character never blurs the two. Plain words by default; a bold header only if you write one; posted in every channel you name, or here. Who said it goes to the roll-audit, not the room (GM)

Fixing What Was Said

`Edit (DDice)  — long-press a message → Apps`
edit anything the bot posted — its own messages and NPC speech from /npc say alike. The text opens prefilled, save replaces it, and the roll-audit records what changed (GM)

`/edit [link:…] [delete:true]`
the same box without the Apps menu: a dropdown only you see lists the last 25 lines the bot and its NPCs said here, newest first; pick one and the text opens prefilled; delete:true takes the picked line down instead. link: a message link or id goes straight to it. Nothing shows in the channel. A player gets the same for the lines they posted with /rp (GM)

Only messages the bot itself posted — its own, and NPC speech sent through **/npc say**. A line carrying only **Reply**, **GM** or **Interaction** is still words to fix, and keeps its buttons; a card with other buttons stays the bot's. A player editing their own **/rp** line sees only their words: the roll beneath and the reply link on top are the bot's and stay. The roll audit

records what changed. A line said through a webhook that has since been deleted cannot be edited by anyone — Discord ties the edit to the webhook — so the bot says so: delete it and have the NPC say it again.

Keeping the Server

Backups

With a channel set, the database is posted there **every 24 hours** — and each backup **deletes and replaces the last**, so the channel holds exactly one file: the newest. **/gm backup now** takes one on demand and replaces the standing post the same way; with no channel set it comes back to you privately as a one-off copy instead.

`/gm backup now`	*(take one immediately — Game Master)*
`/gm backup auto channel:#backups`	*(automatic backups — Game Master)*
`/gm backup auto channel:#backups hours:12`	*(or a different interval — Game Master)*
`/gm backup auto channel:off`	*(stop them — Game Master)*

*The cycle is measured from the **last backup taken**, not from when the bot last started. A redeploy mid-cycle resumes where it left off, and one that happens while a backup is overdue takes it shortly after boot — so a server that redeploys several times a day still gets its daily file. Switching backups on takes one immediately rather than waiting out the first cycle.*

*The file is a **settled snapshot**, not the live database — taken with SQLite's own **VACUUM INTO**, so a write landing mid-upload cannot produce a torn file, and unused pages are dropped so the attachment is as small as it can be. The new backup is posted **before** the old one is removed, so a failure part-way leaves the previous file in place rather than none at all.*

Destructive actions (/npc delete, /fight end, /quest delete, /char weapon remove) ask for Confirm / Cancel before running.

Publishing These Books

The books are built outside the bot and committed to a repository. Point the bot at that repository and it will keep **one current post** of them in a channel of your choosing — when a new build lands, the old post is deleted and replaced rather than the channel filling up with stale copies.

`/config channels docs channel:#gm-books repo:owner/name`	*(set it up)*
`/config channels docs player_channel:#rules`	*(player book alone, posted silently)*
`/config channels docs branch:live path:docs`	*(if not on main, or not at the root)*
`/config channels docs push:true`	*(fetch and repost right now)*
`/config channels docs`	*(what is being watched, and the current post)*
`/config channels docs disable:true`	*(stop watching)*

It looks every **15 minutes**, and **pings the Game Master roles** whenever it publishes. Checking is cheap — it asks GitHub for the file versions rather than downloading, so a check that finds nothing new costs three small requests.

Give it a **player_channel** as well and the **player book alone** is kept current there — posted **silently**, with no role pinged and no notification raised, so a reference channel stays up to date without nagging anyone. It replaces its own previous post the same way.

*The new post goes up **before** the old one comes down, so a failure part-way leaves the channel with a copy rather than none at all. The repository must be public and hold the six books under the names this script gives them: **DDice-Commands-Player.pdf** and **DDice-Commands-GameMaster.pdf** for Knightfall, the same two prefixed **DnD5e-** for 5e, and the two **DDice-Examples** books. A table is handed the set for the rules it plays by, and the Examples either way.*

Updates and the Deploy Mend

Every deploy writes two dated threads into the **gm-updates** forum: **What's new** — the one-line summary of each change first, then **In detail** beneath it: the line again, and under it what changed, why, what you do now and where it lands — and **Deploy mend**, what the boot built or repaired. The player half of the same news goes to the **updates** forum, and once a week so does the players' **Weekly chronicle**: quests completed, titles granted, fights won, the fallen, and the dice of the week — natural 20s and 1s and who rolled them, the biggest d20 total — nothing on a quiet week. Each thread is titled by its date, *[11/10/2026] [WEEK 41] Sunday 11th of October 2026 · What's new*, so the newest sits at the top and the week is readable at a glance. The first boot with the forums in place posts the whole back-catalogue, oldest first, and clears the old update posts out of gm-quest-log. Discord orders a forum by when each thread was made, so the Deploy mend goes up last and a dated thread found out of turn is re-posted into order on the next boot — unless someone has written in it. The mend also keeps the NPC forum to one page per NPC: a duplicate page is folded back into the recorded one and counted in the Deploy mend, unless someone other than the bot has written in it, in which case it is named and left alone. A day with two deploys gets one What's new: an entry that has grown since its thread was posted is deleted and posted again whole — or, if someone has written in the thread, kept and given the new lines beneath — and the Deploy mend says so.

Checks and Reports

`/gm check roster busy:true`
every player at a glance — HP, and whether a quest or a fight is holding them (red means the next rest will pass them over); busy:true shows only those tied up (GM)

`/gm check usage` — *(sixty days of command use, quietest first — a report only; nothing is ever removed by it (GM))*

`/gm check migrations` — *(the ledger of one-time migrations — which have run, which are pending, and what each did (GM))*

`/gm check pages user:@Players`
rebuild character pages from scratch — every bot block cleared and re-posted in order; reports what would not delete. Blank does everyone (GM)

/gm check portraits
move every stored NPC face into its category thread — expired links recovered from history, lost ones named (GM)

/gm dicereport *(the table's dice health — top rollers, hot and cold d20 hands, nat leaders, the full d20 spread)*

/gm questwipe runs:true
delete EVERY quest on the server — confirm-gated; rosters, timelines and book entries go, threads stay. The run ledger and the DM cards' guided counters survive unless runs:true

Test Tools

Trying a feature out usually means inventing a quest or an NPC you then have to tidy out of the world. **/gm test** makes throwaway ones instead. Everything it creates is named **[test]** and can be swept away in one command. It is hidden from players entirely.

/gm test quest	*(a quest with you on the party, in this channel)*
/gm test npc	*(an NPC with items, standing, rolls and lore already on it)*
/gm test list	*(what it has made)*
/gm test forum	*(exercise the NPC forums live, tidying up after itself)*
/gm test clean	*(delete all of it — asks first)*

The test quest arrives ready to start, so the clock, the reminders, the timeline and the summary can all be exercised in a few minutes. The test NPC arrives with a record already on it, so **/npc sheet** has something to show.

*Cleaning only ever touches rows named **[test]**, and clears their events, summaries, inventory, roll tallies and standing log along with them.*

The Fallen

When a character is brought to 0 HP they are down, not gone — whether that is the end is the Game Master's call. **/existence kill** makes it final and writes them up.

/config channels memorial channel:#gm-records public:#the-fallen	*(both halves)*
/existence kill user:@Players	*(call it, once they are down)*
/existence kill npc:Hollow tank	*(NPCs too)*
/existence kill user:@Players anyway:true	*(even while still standing)*
/existence revive user:@Players	*(bring them back)*

It asks for a **cause of death**, optional **last words** and an optional **epitaph**. Everything else is already known: their name, order, rank at the moment they fell, merit, renown — and their **deeds**, which are not typed out but gathered from what the bot watched them do. Quests seen through and how long each took, the merit they earned and what for, the standing they won, the dice of a lifetime, and what they were carrying at the end.

It is written up **twice**. The **GM record** carries the full account — merit, renown, the dice of a lifetime, what they carried, when they fell — with a **Revive** button attached. The **public hall** gets the same life told plainly: name, order, rank, cause, deeds, last words and epitaph, and **no figures at all**. No merit or renown totals, no roll history, no inventory, no dates hanging off the deeds. A hall should hear what someone did, not what they were worth.

Pressing **Revive** brings them back at full HP and **deletes both posts** — a death that was undone does not linger in the hall. If the same character falls again, the button carries a tally beside it: **Fallen 3× · revived 2×**.

The fallen take no further part. A dead character cannot roll, cannot answer an activity, cannot fight and cannot apply for new work — and a dead **NPC** is the same: it cannot be spoken as with **/npc say**, cannot roll, cannot be fought as, and the auto-pilot passes over it rather than taking its turn. Nobody can attack one either.

Refusals are private. A slash command answers only to whoever ran it; a typed roll is answered by DM, falling back to a channel reply if your DMs are shut — being told your character is dead in front of the table every time you forget is its own small punishment.

Nothing is deleted from the character. A fallen one keeps their whole record, so a revival costs nothing and the account can be rebuilt. Until they are brought back they cannot roll: the fallen take no more actions.

◈

Reference

What the Stats Do

`/char stat`	*(what each stat is for, in plain words)*

How Rosters Are Ordered

Every list of characters reads the same way: **Heroes first** as their own group, then by **knight order**, then by **class**, then alphabetically. Characters with no order or no class sort after those that have one, rather than jumping the queue.

***NPCs sit below the players**, however senior their order — the two are separate halves of a list rather than interleaved. Within the NPC half the same ordering applies. Mixed lists like **/existence heal global:Everyone** print each group under its own heading.*

Derived Stats

Max HP is **CON plus a flat base**, 2 by default — so CON 10 gives 12 HP. A Game Master can change the base for the whole server with **/config mechanics hpbase base:3**, making it CON+3; set it to 0 for max HP equal to CON alone. Everyone’s ceiling moves the moment it is changed, players and NPCs alike, though current HP is left where it is — run a rest or **hpfull @Players** to top people up.

Stat	Formula	On change
Max HP	CON + base	HP always maxes
Max Rerolls	LCK	Rerolls always max

Stat	Formula	On change
Heal tracker	White Knight + WIS ≥ 5	Appears / disappears automatically

Telling the GMs Something

`/feedback send`
tell the GMs what you think — pick a room, score it 1–10, say your piece; they see who wrote it, no one else sees it happened

`/feedback send room:General quest:…`
name the room to go straight to the form (blank opens a menu); name a run you were on or ran and the GMs' card says which one

---

Penned by the DDice Scriptorium · May your rolls be ever in your favour
