Start Here

DDice runs the table. It rolls the dice, keeps every character sheet, runs fights turn by turn, posts quests, pays merits and remembers what happened. You talk to it in two ways. **Slash commands** begin with **/** and Discord shows every option as you type — **/roll stat:Strength** is the command **/roll** with its **stat** option filled in. **Typed shorthands** are plain messages the bot watches for — **1d20**, **str**, **hp +2** — for the things you do fifty times a night.

How to Read This Book

Commands are shown as you would type them. **@Players** stands for a player picked from the list Discord offers and **@GMs** for a Game Master (or the GM role); where an example needs real names, **Artorius**, **Meliora** and **Zeus** stand in. **name:**, **number:** and the like are options — type the label, then your answer. Where a line reads **(GM)**, only a Game Master can run it. The chapters follow the order you will meet things: rolling first, then your character, then fights, quests and standing.

`/help`	*(overview of all command groups)*
`/help category:start`	*(the new-player guide — the whole game in one page)*
`/help category:dice`	*(detail on a specific group)*
`/help category:rules`	*(the live table rules as the bot enforces them — the same words the books use, readable by everyone)*

*Anywhere a command asks for something that already exists — an NPC, a quest, a weapon, a tag, an activity and its scenes, a category, a recovery schedule, an item someone is carrying, a title, a group, a spell, a saved sheet, a rest amount — a **dropdown appears as you type**, and you can still type past it freely. Where a new name is the point (create, add, save) what you typed leads the list.*

Where the News Lands

A forum called **updates** carries one dated thread for every change the bot has had — titled by the day it landed, newest at the top — and every entry the bot has ever announced is there from the first. When something in this book looks different from what the bot does, the updates forum says what changed and when.

◈

Rolling Dice

Type dice notation directly or use any prefix style (r, !r, !roll):

`1d20`	*(bare notation — no prefix needed)*
`r1d20+5`	
`r1d20+5 atk`	*(label shows in bold above result)*
`r1d20+5 atk` `[flavour text on next line]`	*(supports *italic* and **bold**)*

Advantage & Disadvantage

`ra1d20+5`	*(rolls twice, takes higher)*
`rd1d20+5`	*(rolls twice, takes lower)*
`ra2d6`	
several dice: the whole set rolled twice, the better total kept — both sets shown, the other struck through	
`rd3d4`	*(the same, the worse total kept)*

A mark the Game Master leaves on you — advantage or disadvantage on your next roll — is spent by whatever you roll next, dice as well as a stat, and on several dice it works the same way.

Advantage Waits on a Game Master

Advantage or disadvantage you pick yourself — **ra**, **wisa**, **/roll mode:Advantage**, a fight's **roll:adv** — is not rolled at once. A card goes up in the channel naming you and the command, and pings the Game Masters with **Allow** and **Deny**. Allowed, you are pinged with a **Roll** button only you can press, good for ten minutes, and the roll goes ahead exactly as you asked it. Denied, it rolls plain at once. Nobody answering in five minutes is a no, and you are told so — roll it again plain. One roll waits at a time in a channel.

Never held: a Game Master's own rolls, and advantage the bot or a Game Master gives you — a mark, a Hero's signature, a condition, a check a Game Master calls, a scene that tilts the dice. A server may switch the hold off.

Guided Roll (/roll)

`/roll`	*(bare: a flat 1d20 — no stat, no modifier)*
`/roll stat:Strength`	*(pick a stat from the dropdown)*
`/roll stat:Wisdom mode:Advantage`	*(advantage / disadvantage)*
`/roll dice:2d6+3 label:damage`	*(custom notation instead of a stat)*
`/roll stat:Dexterity success_check:true label:sneak flavour:*slips into shadow*`	*(label + RP text)*
`/roll last:true`	*(recall your last roll in this channel)*

Every part of **/roll** is a dropdown or field — stat, advantage, success check, label and RP flavour — so nothing has to be memorised. Choose either a **stat** (rolls 1d20 + that stat from your sheet) or custom **dice**. The result uses the same card as a typed roll.

Stat Quick Rolls

`str` `con` `dex` `wis` `lck`	*(on their own — nothing else in the message)*
`strength` `constitution` `dexterity`	*(long names roll exactly the same)*
`wisdom` `luck`	
`wisa` `dexd`	*(advantage / disadvantage · a label may follow)*
`r str atk`	*(a plain stat roll with a label)*
`?str atk`	*(the same, as a success check)*

Rolls 1d20 + that stat from your saved character. Add **a** for advantage or **d** for disadvantage — **wisa**, **dexd**. Every stat answers to its **full name** as well as its short one, and they behave identically: **strength** is **str**, **wisdoma** is **wisa**, **luckrra** is **lckrra**.

A stat roll **always shows your sheet** — stats, HP, rerolls and all — even with the profile embed switched off. A bare **1d20+4** tells nobody which stat it was or where the 4 came from, so the card is forced open where the numbers need explaining. Plain dice rolls still

honour **/char profile off**.

A plain stat name must be the whole message. str, **con**, **dex**, **wis** and **lck** are ordinary words in conversation, so anything typed after one means it is treated as chat and left alone — “Dex or strength can both be used to throw things” is a sentence, not a roll. To label a plain stat roll, put a prefix on it: **r str atk** or **?str atk**.

Forms that cannot be mistaken for words keep their labels as they always did — **wisa sneak**, **dexd guard**, **strrr atk**, **conrra hold the line**.

? Success Check Rolls

Prefix **?** instead of **r** to get a success outcome:

```
?1d20+5   ?ra1d20+5   ?rd1d20+5   ?rr   ?str
?wisa
```

Result	Outcome
Natural 20 / max face	Critical Success (gold)
Natural 1 / min face	Critical Fail (red)
Total 15+	Success
Total 10–14	Partial Success
Total 2–9	Fail

The same holds for every check against a DC — a Game Master’s called check, a planted button, a group check, a target: a natural 20 passes and a natural 1 fails, whatever the total. A natural 20 on a target beats it outright.

Targets

A target is something the Game Master plants in the channel for the party to swing at — a door, a barricade, a Hollow with no sheet. Its card carries the buttons: one for each stat the Game Master allows, all five when they named none, so you pick the stat you swing with. Pressing opens a short form — what you do, what you say, both optional — and your words land above the roll. A natural 20 beats the target outright (*Roll critically succeeds*) and a natural 1 fails (*Roll critically fails*); anything else reads *The roll succeeds* or *The roll fails* and is the Game Master’s call — *The player passes the check — Roll succeeds*, or *fails* — with their words on what happens beneath. A target can take several hits: the card says how many are left, and with a DC set a roll that meets it takes one off with no call. When a swing fails, the card comes back at the bottom of the channel with its buttons, counting its returns, ready for the next.

Critical Hits & Fails (all rolls)

Natural max on any die → gold label + result.
Natural 1 on any die → red label + result.

One Reroll Per Roll

A roll can be rerolled **once**. Whatever the second attempt says, it stands — you cannot keep spending rerolls on the same roll until the dice agree with you. This holds everywhere: typed rerolls, **/fight rr**, and the prompt inside an activity.

In a fight each side of an exchange gets its own second chance, so an attacker rerolling does not use up the defender's. A fresh exchange resets both.

Rerolls are still a resource — this is a limit on top of having one to spend, not instead of it.

Rerolls

`rr`	*(costs 1 token)*
`rra`	*(reroll with advantage)*
`rrd`	*(reroll with disadvantage)*

Shorthand: append a reroll set to a stat — **strrr**, **dexrra** (adv), **conrrd** (dis) — to reroll your last roll. A label may follow: **strrr atk**.

◈

Making Your Character

Make Your Character

Build your character with /char create. One command sets the whole sheet at once — every stat, your order, your class and both weapons — so it arrives complete instead of in pieces.

`/char create str:14 con:12 dex:10 wis:5 lck:3 \`
`  order:White Knight class:Vanguard \`
`  weapon1:Longsword weapon2:Tower Shield`
	(the whole character, one command)

Every option is optional — fill in what you have decided and run it again later to add the rest. The values for **order**, **class** and the weapon fields are listed further down this chapter.

This matters most where a GM has switched sheet approval on. /char create sends one request for the whole character; building the same sheet a field at a time sends a fresh request on every single change and buries the GMs in them. It matters again afterwards, because once your sheet is approved every field is locked and only a GM can change it — so /char create is your one clean run at the character you want.

The Point Budget

A player building their own character spends **exactly 15 points** across the five stats, and every stat needs **at least 1**. Not 14, not 16 — the full allowance, all of it placed. A Game Master can change both numbers for the server with **/config mechanics statallowance**.

`/char create str:5 con:4 dex:3 wis:2 lck:1`	*(15 exactly, nothing on zero — fine)*
`/char create str:4 con:4 dex:3 wis:2 lck:1`	*(14 — refused, 1 still to place)*
`/char create str:6 con:5 dex:3 wis:2 lck:1`	*(17 — refused, take 2 back off)*

`/char create str:9 con:5 dex:1 wis:0 lck:0`	*(over AND stats on 0 — both reported)*

A sheet also has to be **finished** before it can go to a Game Master: both weapons named, and an emoji chosen for each with **/char weaponemoji**. A weapon emoji has a default, so picking one is what counts — leaving it be is not the same as choosing it. Weapons can be set on **/char create** in the same breath as your stats.

`/char create str:5 con:4 dex:3 wis:2 lck:1 \ weapon1:Gunlance weapon2:Rifle`	*(stats and weapons at once)*
`/char weaponemoji slot:Weapon 1 emoji:[choose]`	*(then an emoji for each)*
`/char weaponemoji slot:Weapon 2 emoji:[choose]`	

The refusal is posted **in the channel you are working in**, not as a private note only you can see — so it sits alongside what you typed. A copy also goes to the **approval channel** with a jump link back to the attempt, so the Game Masters can see who is wrestling with the budget and step in without having to be in that channel. Nothing is submitted either way.

Break a rule and the sheet is refused on the spot with a note saying exactly what is wrong — both problems at once if you managed both — along with your current spread and running total, so you can see what to move. Nothing is saved and nothing goes to the GMs until it is legal. The same check runs on **/char set**, on a pasted sheet, on **/char profile load** and on **/char submit**, so there is no way in around the back.

Adjusting one stat at a time with **/char set** only checks the ceiling, so you can shuffle points between stats freely — lowering one before raising another would be impossible otherwise. The sheet is saved either way, but it is held back from the Game Masters until the full allowance is placed, and it tells you how many points are still loose.

Game Masters are not limited by any of this — building a character for a player, adjusting one, or making their own. A Game Master can hand out whatever spread a story calls for, and NPCs are unaffected entirely.

Changing One Field Later

Use **/char set** to adjust a single thing after the fact — a stat that went up, a weapon you swapped. It is a touch-up tool, not the way to build a character from nothing. Pick the **field** first: **value** then offers what fits it — the orders, the classes, the weapon list, the weapon emojis.

`/char set field:str value:14`	*(one field at a time)*
`/char set field:con value:12`	*(HP auto-maxes to CON + 2)*
`/char set field:lck value:3`	*(rerolls auto-max to LCK)*

Knight Orders

These are the values to pass to **order:** on /char create — or to /char set if this is the only thing you are changing.

`/char set field:order value:White Knight`	*(also: Black, Gold, Grey, Blue,)*
`/char set field:order value:Red Knight`	*(Purple, Green, Red)*

Class, Weapons & Emojis

`/char set field:class value:Vanguard`	*(Vanguard / Defender / Siege Knight — Hero is a status a GM grants)*
`/char set field:weapon1 value:Longsword`	
`/char weaponemoji slot:Weapon 1 emoji:[choose]`	*(standard emoji dropdown)*
`/char weaponemoji slot:Weapon 1 custom::sword:`	*(paste a server emoji)*

Pick a standard emoji from the dropdown, or paste a server custom emoji in the "custom" field (it overrides the dropdown). The image export falls back to a sword glyph for custom emojis.

Is My Sheet Ready?

Rather than finding out one refusal at a time, ask.

`/char check`	*(the whole checklist at once)*

It shows your stats against the point allowance and how far off you are, whether both weapons are named, whether both emojis are chosen, and then whether the sheet is ready to send, already with a Game Master, or approved.

If a GM Sends It Back

If a GM **rejects** your sheet you can fix it and try again yourself — change whatever they objected to with **/char set** or **/char create** and it goes straight back to them. If you think it was right as it stood, **/char submit** sends it again unchanged. There is no limit on how many times a sheet can go back and forth.

Your Sheet and Your Thread

Reading & Sharing Your Sheet

`/char create ...`	*(see Making Your Character — builds the whole sheet)*
`/char view show`	`/char view show user:@Players`
`/char export`	`/char export format:Image`

`/char export format:Parchment image`
the sheet on parchment, in the scroll font — for display; Discord strips an image's weave on re-upload, so use the Parchment PDF or Text block to travel

`/char export format:Parchment PDF`
the same parchment as a PDF — the one file that survives Discord re-uploads, sheet woven after its EOF

`/char export format:Career PDF`
the career record as a native-text parchment PDF, career woven after its EOF — survives Discord and imports back through /char import

`/char export format:Summary`
the career record — rank, merits, renown, dice history, pack, quests, lore — over a paste-able [TTRPG SUMMARY] block

`/char import`
hand an exported sheet OR career block to this server — a Parchment PDF (the carrier that survives Discord), a pasted block, or bare for a paste box; a GM approves. Careers move merits and renown to the imported totals and add dice history, items and lore — sheet, rank, quests, tags untouched

`/char submit`	*(resend your sheet after a rejection)*

With sheet approval switched on, an export goes to the GMs first. Running **/char export** posts the sheet block into the approval channel with **Release to player** / **Decline** buttons; the player sees only a private note that it has been sent. When a GM releases it, the block arrives by DM — or back in the channel they exported from, if their DMs are closed. Exporting is not an edit: it never changes a sheet's approval state and never stops anyone rolling. Exporting again replaces the previous request, so the channel holds one live entry per player. GMs export straight away, for themselves and for anyone else, and on servers not using approvals nothing changes.

The Pages of a Sheet

Beyond the stat block, a character accumulates things worth keeping. Each page can be read for yourself or for someone else with **user:**.

`/char view show full:true`	*(the card and every page below, on one post)*
`/char view inventory`	*(what they are carrying)*
`/char view standing`	*(merit and renown, and where each came from)*
`/char view rollhistory`	*(every natural die this character has rolled)*
`/char view rollhistory sides:6`	*(the same for a different die)*
`/char lore`	*(write your lore and send it to the Game Masters)*
`/char view showlore`	*(read approved lore)*

Inventory holds roleplay items — things an activity handed over, or a Game Master gave out by hand with **/char give user:@Players item:A tarnished silver key**. Each carries a number, so **/char take user:@Players id:3** removes one. Giving and taking are Game Master-only.

Standing puts total merit and renown at the top, then lists every movement beneath it — the quest, activity or Game Master award that caused it, the amount, and how long ago. Merits are a lifetime tally that only climbs; renown is a currency that is spent again.

Roll history counts every natural die a character has ever rolled, drawn as a bar chart with the natural 20s and 1s marked. It follows the character, not the player, and covers every roll they make — typed, slash, in a fight or in an activity.

Lore opens a writing box, pre-filled with whatever you wrote last time. It goes to the same channel character sheets do, with Approve / Reject buttons; a rejection asks the Game Master why and passes the reason back. Only approved lore shows on **/char view showlore** — before that it says it is waiting, or why it was turned down. Rewriting retires the old request and sends a fresh one.

Nothing here is required. A character works perfectly well with an empty inventory, no lore and no renown — these are for tables that want to track more.

Your Thread

With a character forum set, every approved character gets a thread of their own there — the sheet first, then inventory, lore, standing, titles and associations as posts beneath it — kept current by the bot, so the sheet in your thread changes the moment a stat does. A button on the page asks a GM to update your lore document; everything else writes itself.

Your Roll Card

How much of your sheet appears when you roll is up to you.

`/char profile card style:Full`	*(the whole sheet)*
`/char profile card style:Compressed`	*(one line of stats)*
`/char profile card style:Off`	*(plain text rolls)*

Compressed puts everything on a single line under the roll — **STR 5 · CON 5 · DEX 4 · WIS 4 · LCK 2 · HP 8/8 · RR 2/2** — which keeps a busy channel readable without hiding where a modifier came from.

*A **stat roll always shows something**, even with your card Off: **1d20+4** says nothing about which stat it was or where the 4 came from, so those fall back to the compressed line. Choosing Compressed is respected rather than overridden — the bot never upgrades you to Full. Plain dice rolls honour Off completely.*

Saved Sheets

`/char profile save slot:vault`	*(keep a copy of your sheet)*
`/char profile load slot:vault`	*(put it back)*
`/char profile saves`	*(what you have saved)*

Loading a save is checked like any other change — an old snapshot cannot smuggle in a spread that breaks the current point allowance.

Profile

`/char profile on`	*(enable embed, max HP + rerolls)*
`/char profile off`	*(disable embed, plain text rolls)*
`/char profile show`	*(preview card without rolling)*

Sheet Import

Paste an exported sheet into any channel the bot watches.

`[paste sheet into channel]`	*(your own exported sheet, back onto this server)*

Heroes

Hero is a **status**, not a class. A Game Master grants it, and it sits alongside whatever class and knight order a character already holds — a Hero can be a Green Knight Vanguard.

`/char hero user:@Players value:true`	*(Game Master grants it)*
`/char hero user:@Players value:false`	*(and takes it away)*
`/char signature user:@Players stat:Strength`	*(a Hero rolls that stat with advantage)*

It used to occupy the class slot, so a Hero could be nothing else. Anyone whose class said Hero has been moved across automatically and their class slot freed. Removing Hero status clears the signature stat with it.

HP, Healing and Rest

Your hit points and reroll tokens live on your sheet, and the typed shorthands below move them. The **!** prefix is optional — **hp +5** and **!hp +5** are the same message.

`!hp +5`	
`!hp -3`	
`!rerolls +1` `!rerolls -1`	*(reroll tokens, the same way)*

Heal (White Knight + WIS 5 only)

Targets another player — cannot self-heal.

`!heal @Players`
`!h @Players`

Roll Result	Effect	Charges Used
Natural 20	+2 HP restored	None
20+ (modified)	+2 HP restored	1
2 – 19	No heal	1
Natural 1	No heal	2

Rest Commands (Player)

A Game Master can point any of these at a player by adding their mention — **lrest @Players**. Default amounts shown — Game Masters can change them with **/config mechanics rest**.

Command	HP	Rerolls	Heal Charges
lrest	Full	Full	Full
srest	Half	—	—
hpfull	Full	—	—
hphalf	Half	—	—

Short rest restores HP only by default. A Game Master can re-enable rerolls/heal or change any amount.

Fighting

Proper fights: everyone rolls to see who goes first, then takes turns. The bot keeps score.

Commands

`/fight start players:@Artorius @Meliora @Zeus npcs:Hollow, Hollow tank`
any number of each — DEX initiative; fighters on the same total reroll among themselves until apart, and the card says who rolled what

`/fight start ... manual:true` — *(skip roll, keep listed order)*

`/fight start ... practice:true` — *(friendly bout — fighters yield at 2 HP)*

`/fight atk stat:str target:@Players`
attack a player — the form opens for your words (flavour: given, it swings at once); with one foe the target may be left off; /fight atk alone offers the stat buttons

`/fight act action:Grapple target:@Players`
STR-only grapple attempt, STR 4+ on Knightfall — the target answers with /fight act action:Save (STR only). If the attempt meets or exceeds the save, the hold takes: immobile, 1 wound a round, and any action on a flat d20 — though a captive can still attack anyone, the grappler included. A grab of 20 takes it whatever the save, for 2 wounds; a grab of 1 fails outright and leaves your next defence a flat d20; a save of 20 slips free unless the grab was a 20 too, and leaves your next attack flat and the saver +2. The grappler may release freely and can never strike their own captive

`/fight act action:Grapple (a strike pending on you)`
a grapple as your DEFENCE — STR 4+, 1d20+STR against the attack, ties to the attack. Beat it and the blow does nothing and the striker is held — the wounds start once your turn has come round; a natural 20 takes hold whatever the totals and banks +2 on your next attack; fall short and the blow lands as on any failed defence, a natural 1 adding its point. Not against a natural 20, a grab, a feint or a kept hold; not from a hold, while holding someone, or on a striker already held. The defence row's Grapple button does the same

`/fight act action:Save`
your STR save against the pending grapple — GMs save for an NPC with npc:Name; auto NPCs save themselves

/fight act action:Escape

on your turn while held: the grappler's hold rolls 1d20+STR first (signature advantage honoured), then you roll 1d20+STR against it; ties keep the hold. Break out first and the round costs nothing; fail and it takes the round's wound at once — 1 more for each further failure that round, 2 on a natural 1. A break of 20 frees you whatever the totals and leaves the grappler's next attack flat. A hold of 20 makes your break a flat d20; a hold of 1 slips — you are free at once, with no wound, and the grappler's next roll is a flat d20 at disadvantage

(Maintain the hold)

the holder's button on their turn: roll 1d20+STR to keep the grip, and the captive is pinged to answer — Break free (STR against it; ties keep the hold) or Stay. Staying, or no answer by the turn clock, keeps the hold, and the round's wound lands at the end of the captive's turn. An NPC on auto always struggles. A hold of 1 slips at once: the captive is free with no wound, and your next roll is a flat d20 at disadvantage

/fight act action:Stay

let a kept hold stand — the answer the Stay button gives; a Game Master answers for an NPC with npc:Name

/fight act action:Release *(the holder lets go — a free action, the turn stands; GMs may part any hold with target:)*

(the buttons)

on your turn: five stat buttons to attack with, then Grapple · Feint · Disarm beneath (each asks whom — Disarm lists the NPCs; Feint then asks what you pretend) — no Grapple while you are held. Disarmed, your turn carries Retrieve alone. When a strike comes at you, the defence row adds Deflect · Disarm · Grapple. Holding someone adds Maintain the hold (your STR roll; they answer Break free or Stay) and Release; being held adds Break free. Save and Insight sit on the card that asks. Every one of them opens a short form first — what you do, what you say, both optional — and your words sit on the card; a blank form is a plain roll. With one foe standing, an attack press goes straight to the form

/fight act action:Deflect

shield deflection against a PvE strike — needs a shield equipped and STR 4+ (the gate holds whichever stat rolls), once per round, and a natural 20 cannot be turned. Roll STR or DEX (stat:) to beat the attack roll; optionally redirect_npc: sends the blow into another enemy for 1 damage — and the enemy loses its next turn retrieving the weapon. Fall short and it lands on you for 1. A natural 20 turns it whatever the totals, the redirect deals 2, and your flat next attack gets +2; a natural 1 fails outright for 2. Either way your next attack roll is a flat d20 — after a 1, your next defence too

/fight act action:Disarm

NPCs only, DEX 4+, no blade needed. Against an NPC's strike (once per round, never a natural 20): DEX to beat the attack — no damage, and the NPC spends its next turn retrieving the weapon; fall short and the strike lands on you for 1. On YOUR turn (target_npc: or the Disarm button): your 1d20+DEX against the NPC's 1d20 + the better of its STR and DEX, rolled by the bot — ties to the NPC, no naturals on its die. A natural 20 disarms whatever the totals and wounds it 1 (against a strike it also banks +2 on your next attack, flat or not); a natural 1 fails for 2 wounds and disarms YOU. After any disarm, your very next roll is a flat d20

/fight act action:Retrieve

disarmed, your next turn goes to the weapon: the Retrieve button (or this) opens a short form — what you do, what you say — and the turn passes. No attack, grab, feint, disarm, escape or hold until you have; whatever flat roll you owe waits for your next real one. A skipped turn counts as the retrieval

/fight act action:Feint feint:"..."
a deception IN A FIGHT (away from one, it is /deception), and it spends either half of the fight. On YOUR turn it is an attack — WIS against their insight, and if they fall for it the blow lands with normal damage (a natural 20 still crits) AND their very next roll is a flat d20. A feint of 20 fools them whatever the insight; a feint of 1 is a total failure. An insight of 20 sees through it unless the feint was a 20; an insight of 1 is fooled. With a strike pending on YOU it is a defensive feint — WIS in place of your usual stat, though not against a natural 20 — and if the blow misses, the attacker's very next roll is flat; a defensive feint of 1 is a total failure, and the blow lands whatever the totals (unless the attack was a 1 too). THE PRICE, landed or not: your own very next roll is a flat d20 — at disadvantage too after a 1. WIS 4+; ties go to the target. ONE FEINT PER HONEST ROLL: after a feint you must make an ordinary stat roll before you can feint again — the flat roll a feint costs you counts

/deception target:@Players
a deception AWAY FROM A FIGHT — a WIS contest in a market, a hall, a cell; target_npc: makes an NPC the mark, its insight rolled by the bot. A form asks what you pretend (everyone sees it), what you are really planning (kept back until the dice have spoken) and what you say. Both roll at once and the totals decide, ties to the mark; a natural 1 fails outright, and no other natural counts. Fooled, their very next roll is a straight d20 — a chat roll, /roll, a scene, a called check or a fight elsewhere. The price, whatever happens: your own very next roll is a flat d20, at disadvantage after a 1. No cooldown. Refused while you or they are fighting in the channel: there, it is a feint

/fight act action:Insight
your WIS check against the pending feint — GMs roll for an NPC with npc:Name; auto NPCs check themselves. If you already owe a flat roll — fooled before, or a feint's or a deception's price — even this roll is flat

/fight atk stat:str target_npc:Hollow tank *(attack an NPC)*

/fight def stat:dex *(defend — the form opens (flavour: rolls at once); /fight def alone offers the stat buttons)*

(buttons)
every prompt carries its answer: the attack card offers five DEFEND stat buttons, the grapple card a Save, the feint card an Insight, the defence card Resolve, a disarmed turn Retrieve — and Reroll rides along. One answer per strike: once your defence is in, Reroll is the only way to roll it again. One press, same rules, same audit trail. Every turn line lists everyone standing with their HP, and any condition the Game Master has marked you with, counting down. A quiet spell (ten minutes unless the Game Master sets otherwise) and the bot pings whoever the fight is waiting on, once a turn

/fight rr
reroll last fight roll — 1 token. The card says which roll it was (an attack, a defence, a grab, a feint, a hold) and who answers it; a hold rerolled into a 1 slips at once

/fight atk stat:str target:@Players roll:adv
advantage on a fight roll waits on a GM's yes, as every roll you pick it for does — name the stat with it (the stat buttons roll plain); the turn clock waits meanwhile, and if the fight moves on, nothing rolls

/fight resolve *(resolve the exchange)*

/fight status *(show turn order and HP)*

/fight log [scroll:true]
repost the recap of the last finished fight in this channel — only the fighters who actually took part, and only that fight: a new fight always starts a fresh recap. scroll:true hands it over as a parchment PDF in the scroll font

`/fight forfeit`	*(concede — HP preserved)*

How a Fight Runs

When a fight starts, the bot rolls DEX initiative (1d20 + DEX) for every fighter and orders the turn order from highest to lowest, ties broken by the raw d20. Add **manual:true** to skip the roll and keep your listed order, or use **/fight order** with a comma-separated sequence.

The turn clock: a fight waits five quiet minutes on whoever it is waiting for, then reminds them — press **Still writing**, or just keep typing — and at fifteen the turn passes: skipped, or, where the Game Master has set it so, the bot attacks for them at whoever they last struck (else the weakest foe standing). A defence is never skipped: the bot rolls it. A Game Master sets the minutes for a channel with **/session clock**.

Knocked-down fighters: anyone at 0 HP or less is left out when a fight starts or when NPCs are added, with a warning naming them. Restore NPCs with **/npc heal** or **/npc hp**, players with rests or **hpfull @Players**.

Practice bouts: add **practice:true** to **/fight start** or **/fight auto** and the fight becomes a friendly spar. Everything runs exactly as normal — initiative, rolls, damage, crits, carry-over effects, rerolls, recap — but the cut-off moves from 0 HP to **2 HP**. A fighter bows out the moment they reach 2, and damage never carries anyone below it, so nobody leaves the yard worse than winded. Sparring partners already at 2 HP or less are left out at the start, the same way knocked-down fighters are. The bout is announced on start, marked on **/fight status**, and noted again in **/fight log**, so a spar can never be mistaken for the real thing.

HP stays in sync: any mid-fight HP change — **!hp**, **!heal**, rests, **/npc hp** or the **/fight hp** command — is mirrored straight into the fight, so a heal is never overwritten by the next exchange. Anywhere a command takes NPC names, **category:Name** adds a whole category at once.

Picking a Target

Leave **target** off **/fight atk** and the bot asks who you mean, listing everyone still standing with their HP — NPCs marked, the fallen and the already-downed left out, and yourself excluded. Choosing one hands back the command with the target filled in, ready to send.

With only one opponent left there is nothing to choose, so it simply names them. The menu belongs to whoever opened it — nobody else can pick your target for you.

A Custom Roll in a Fight

When it is your turn, **/roll … fight:true** submits that roll in place of **/fight atk** or **/fight def** — so a Game Master can call for something unusual without the fight chain breaking and everyone falling back to rolling by hand.

`/roll dice:2d6+3 fight:true target:@Artorius`	*(attack with 2d6+3)*
`/roll dice:1d100 fight:true`	*(defend with a d100)*
`/roll action:Grapple target:@Artorius`	*any fight ability straight from /roll — the same menu as /fight act (pick Save to answer a pending grapple, Insight for a feint, and so on). No advantage option here — /fight act roll: carries that*

`/roll stat:wis fight:true target:@Artorius`	*(attack with WIS instead of STR)*

It writes into the same fight the normal commands use, so **/fight resolve** handles it exactly as ever — damage, criticals, carry-over effects and the recap. The die size is remembered, so a natural 20 on a d6 is not mistaken for a critical.

*It has to be asked for. A player rolling casually mid-fight should not accidentally commit their turn, so nothing is submitted without **fight:true**. If it is not your moment the roll is refused with the reason, and stands alone instead.*

Your Preferred Stats

`/char prefer atk:Dexterity def:Constitution`	*(your own, for when auto rolls for you)*
`/char prefer`	*(see what is set)*
`/char prefer atk:Clear it`	*(go back to using your best)*

This matters to players as well as Game Masters: **/fight auto** in full mode rolls for **everyone** in the fight, so without a preference your character swings with their strongest arm whether that suits them or not.

*A preference **never overrides a weapon**. If what you asked for is not one of the stats your weapons allow, your best allowed stat is used instead and **/char prefer** tells you so — setting one can only ever narrow a free choice, never break a rule.*

Damage

Situation	Damage
Attack total ≥ Defence total	1
Attacker natural 20	Lands whatever the totals — 2 (the +1 bonus)
Defender natural 1	+1 bonus
Attacker nat 20 + Defender nat 1	4 total
Attacker nat 20 + Defender nat 20	The attack lands whatever the totals — 2
Defence total > Attack total	0 (blocked) — unless the attack is a natural 20
A wound (held, a failed break, a special move)	1 — a wound is a point of damage, 1 HP
Fighter reaches 0 HP	Knocked down, removed from turn order, HP goes negative

Players can reroll using **rr / rra / rrd** after their initial roll before **/fight resolve**.

Critical Effects (carry-over)

A natural 1 or natural 20 leaves a mark on the *next* roll, in both manual and auto fights:

Trigger	What happens
Natural 1 on an attack	The attack fails automatically, whatever the totals say — and the attacker's next defence is rolled as a flat d20 (no stat, no advantage)
Natural 20 on an attack	The blow lands automatically, whatever the totals, for 2 — 4 against a defending 1. It cannot be deflected, disarmed, grappled or read by a defensive feint. No carry-over: an attacking 20 pays out as damage
Natural 20 on a defence	The blow is parried automatically — unless the attack was also a natural 20: twenty meets twenty, and the attack lands whatever the totals, for 2. Either way the defender gains +2 TO HIT on their next attack roll (added to the stat modifier — never to damage)

Each carried effect is consumed by that fighter's next matching roll and announced when it lands ("presses the riposte", "defends on a flat d20"). Leaving a fight clears any pending effects.

Naturals on the Special Moves

Grapples, holds, feints, deflections and disarms have their own 20s and 1s, read before the totals; a deception away from a fight has only its 1:

Roll	What happens
Grapple of 20	The hold takes whatever the save, and the target takes 2 wounds
Grapple of 1	Fails outright, whatever the save, and the grappler's next defence is a flat d20
Grapple save of 20	Slips free — unless the grab was a 20 too — and the grappler's next attack is a flat d20; the saver's next attack gets +2
Grapple of 20 against a strike	Takes hold whatever the totals, no damage, and banks +2 on your next attack
Grapple of 1 against a strike	Fails outright: the blow lands, the defending 1 adding its point
Held	1 wound a round: at the end of your turn, or at once when a break fails (the turn's end then costs nothing); 1 more for each further failure that round
Break of 20	Free whatever the totals, and the grappler's next attack is a flat d20
Break of 1	Fails, for 2 wounds

Roll	What happens
Hold of 20	The captive's break is a flat d20 — or, if they stay, their next roll is
Hold of 1	The hold slips at once: the captive is free, with no wound, and the grappler's next roll is a flat d20 at disadvantage
Feint of 20	Fools them whatever the insight; the blow lands, a 20 for 2
Feint or deception of 1	A total failure — a defensive feint of 1 lets the blow land whatever the totals — and the user's next roll is a flat d20 at disadvantage
Insight of 20	Sees through a feint, unless the feint was a 20
Insight of 1	Fooled by a feint whatever the totals — the blow lands, the defending 1 adding its own
Deflect of 20	Turns the blow whatever the totals; the named enemy takes 2, and your flat next attack gets +2
Deflect of 1	Fails for 2 wounds; your next defence is flat as well as your next attack
Disarm of 20	Disarms whatever the totals and wounds the NPC 1; against a strike it also banks +2 on your next attack, flat or not
Disarm of 1	Fails for 2 wounds and disarms you: your next turn goes to retrieving the weapon

A feint is a deception in a fight; /deception is a deception away from one, refused to anyone fighting in the channel. Every feint and every deception has a price, landed or not: the user's very next roll is a flat d20 — a mark in the fight when they are in one, a mark on their sheet anywhere else, an NPC's too. One feint per honest roll, that flat roll counting as one; /deception has no cooldown. After any disarm the disarmer's very next roll is a flat d20, and a fighter disarmed — or an NPC whose blow was deflected — spends their next turn retrieving the weapon. One answer per strike: a defence is rerolled with a token, never rolled again. A held fighter can still attack anyone, the grappler included, on a flat d20, and a held turn that the clock or a Game Master skips still ends with its wound.

When a Fight Ends

However a fight finishes — a knockout, a forfeit, a kick, **/fight end** or an auto-resolve — a single public **result post** goes to the channel where everyone can read it. Nothing important is left in a private reply: the Game Master's confirmation for **/fight end** stays private, but the result itself is posted for the whole table.

The post names the **victor**, then lists every combatant's **final standing** — exact HP for players, a condition band for NPCs while their stats are hidden — followed by the recap.

The **recap** covers players and NPCs alike, in three parts. **Rolls**: how many attacks and defences each fighter made, their average total, and their best and worst natural dice.

Damage: dealt and taken, natural 20s and 1s, and rerolls spent. **Blow by blow**: every exchange in order — both rolls, the natural die and the final total for each side, and whether it landed or was blocked, with natural 20s and 1s marked. Very long fights show the most recent exchanges and say how many earlier ones were trimmed; the roll and damage figures still cover the whole fight. Long recaps are split across messages so nothing is lost to Discord's length limit.

/fight log re-posts the last finished fight's recap in that channel at any time, blow-by-blow included.

Duels

A challenge between players, put to the Game Masters as one message rather than a scattered argument in chat.

`/duel`	*(raise one)*
`/duel terms:First blood, no rerolls`	*(and say how it will be fought)*

The post carries four buttons. Others press **Stand in** to attach themselves, **Step out** to leave, and when at least two are in, whoever raised it presses **Send to the GMs**. It then appears in the approval channel with **Allow it / Decline**, so the whole table can see what was asked and what was answered. **Withdraw** pulls it at any point.

One duel per player at a time *— you cannot raise a second, nor stand in someone else's while yours is open. Withdrawing frees you immediately. A declined duel comes back with the Game Master's reason, and an allowed one is announced where it was raised.*

Approval does not start the fight — it clears it. A Game Master then runs **/fight start** with the fighters, which the approval message spells out ready to copy.

Quests

GMs create quests with lore, objectives, details and rewards. Quests are posted as a message with an Apply button and also appear on the board. Players apply, a Game Master approves the party, and on completion merits are auto-awarded while other rewards are listed for the Game Master to hand out.

For Players

`/quest board`	*(list quests (filter: open/active/completed/all))*
`/quest show number:1`	*(full details of one quest)*
`/quest roster number:1`	*(see applicants and the party)*
`/quest party apply number:1`	*(apply to join — or tap Apply on the post)*
`/quest party withdraw number:1`	*(leave or cancel your application)*
`/quest record user:@Players`	*(one player's finished quests — what they have been on)*

Quests are auto-numbered for easy recall, e.g. ***#001-Hollow Cave*** *(repeatable quests keep the name and get a fresh number each time). Party size is a hard cap or a suggestion — the Game*

*Master chooses with **hard_cap**, and **force:true** on approve overrides a cap. Point a quest at a thread with **/quest runchannel** and its completion rewards are announced there.*

Your Party's Thread

When a run starts it opens its own thread in **quest-instances** with the whole party pulled in. That thread is where the quest happens: fights fought there log themselves on the quest's timeline, the Game Master's rally pings everyone in it, and the ending is written up there before it goes anywhere else. A player holds one seat at a time — you cannot be approved onto a second quest while a run is still live.

Instances — Encounters, Chapters and Older Quests

Not every session comes off the board. The Game Master can open a run with **/instance**: an **encounter** on the fly, a numbered **chapter** of a campaign, or a **quest from before the bot** picked up where it left off. No board, no applications — the Game Master ticks who is in it from the roster and opens it; it gets a thread of its own in quest-instances like any run, and pays out like one (an older quest pays only what the Game Master sets). The seats are the Game Master's: there is no Join button, so if you want in, ask. An instance does not count as your one quest, so a party already out on a quest can still be jumped by bandits. A run may be **recorded**: then everything said in its thread goes into its log, not only what passes through the bot — the thread says so when it is.

`/instance list`	*(every run going now, its kind, where, and its time so far)*

Campaigns

A campaign is the long arc — quests and encounters under one name. Its card shows the premise, what is done and your own part in it; the Game Master's notes and status stay on their side.

`/campaign list`	*(every campaign on the server)*
`/campaign show campaign:The Falconer's War`	*(the premise, what is done, and your part)*

Roleplay on the Record (/rp)

Outside a fight the same boxes the fight buttons open are a command away: **/rp** opens them — what you do, what you say, a **stat to roll** from a dropdown of this server's own, and any **dice** — and **/rp action:… speech:… roll:… dice:…** skips the box. The line goes out in your own name and face, shaped as the cards are: *the action*, then "the speech", then the roll beneath. A roll keeps the rules a typed one does — the Hero's advantage, a mark you carry, a deception that fooled you — and **rr** rerolls it as it would a typed one. If the Game Master has called a check on you here, a **stat roll answers it**: the check's own terms, its button darkened, its outcome under your words. Inside a run the words become a beat on the timeline and the roll a roll in its log, in the recap and in the story scroll that comes with the completion card.

Every line carries a **Reply** button, and so does every line an NPC says — press it and the same box opens as a reply. A reply wears a small line on top, ↪ *replying to Name*, and that name is a link: tap it and you are taken to the line it answers. Several people can answer the same line; the button never moves. Beside it on your own lines sits **GM** — the Game

Master's: they can answer your line as any NPC, and their answer links back to it the same way.

`/rp`	*(opens the box)*
`/rp action:draws her blade speech:Not one step closer.`	*(posts at once)*
`/rp speech:Stand aside. roll:str`	*(with a stat roll — it answers a check called on you here)*
`/rp action:swings dice:1d8+2`	*(with any dice)*
`/edit`	*(fix the words of a line of yours — the roll and the reply link stay as they were)*
`/edit delete:true`	*(take one back)*

Taking Turns — Initiative

When the Game Master calls for initiative, a card appears with a **Join** button — press it to take a place. Once the order is rolled (d20 + DEX, ties rerolled), each turn gets its own card naming whose it is and who is next, and the rounds are counted. On your turn, post, then press **Done**. Quiet for five minutes, you are reminded: press **Still writing**, or just keep typing. At fifteen the turn passes.

`/session turn`	*(the order, whose turn it is, which round)*
`/session turn action:next`	*(Done, typed — for your own turn)*

The Chronicle and the Review

When a run is completed, the Game Master's telling of it lands in your own thread in **quest-chronicle** — one thread per adventurer, every quest they finished, told by whoever ran it — and the summary is linked on your standing page. The run's thread then carries a review button: a score out of five and a line or two, for the Game Masters alone to read. **/quest record** lists what you have been on.

Standing

A milestone-style progression system. Merits are a lifetime tally a Game Master awards; ranks are named tiers with merit thresholds. The bot tracks progress and flags eligibility, but every promotion is decided by a Game Master.

Merits

`/standing merit view`	*(your merits, rank, and merits to next rank)*
`/standing merit view user:@Players`	*(view another player)*
`/standing merit leaderboard`	*(top earners on the server)*
`/standing merit history user:@Players`	*(a player's merit timeline)*

`/standing merit history`	*(recent server-wide merit activity)*

Ranks

`/standing rank list`	*(all ranks and their thresholds)*

/standing merit view *shows current merits and exactly how many more are needed for the next rank, e.g. "Knight · 7 merits · 8 to Paladin". Every merit change is recorded — quest rewards show the quest name, manual changes show "by GM" — so* ***/standing merit history*** *answers "who earned what, and when". Removing a rank doesn't change players who already hold its label.*

Titles & Associations

A title is a name earned — granted by a Game Master, or carried away by every survivor of a quest that offered one, stamped with where it came from. An association is a company, order or cause a character stands with. Both show on the character's page.

`/standing title list user:@Players`	*(the titles they hold)*
`/standing association list group:The Falconers`	*(who stands with a company)*

Renown

Renown is not a currency. It is a running tally of how a character **stands in the world** — what they have done, who has noticed, and how far their name carries. It is earned from quests, encounters and activities, and it is not meant to be traded away for goods. Someone with high renown is **known**; that is the whole of it.

A Game Master can adjust it either way when the story calls for it — a reputation can be damaged as well as built — but it is a record of standing rather than a purse.

`/standing renown view user:@Players`	`/standing renown view`
`/standing renown leaderboard`	*(who is best known)*
`/standing renown history`	*(where a standing came from)*
`/standing renown gain user:@Players amount:5 reason:Cleared the Sunken Vault`	*(Game Master)*
`/standing renown loss user:@Players amount:3 reason:Disgraced at court`	*(Game Master)*
`/standing renown set user:@Players amount:0`	*(Game Master)*

Every change is logged with its reason, so **/standing renown history** answers how a reputation was built and where it was lost.

Merit

Merit is the earned measure of service — awarded by a Game Master, accumulated across quests and activities, and the thing rank thresholds are set against. Unlike renown, **merit is tradeable**: it can be passed between players, and potentially to and from NPCs, as payment, tribute, a debt settled or a favour bought.

`/standing merit give user:@Players amount:2 reason:A debt settled`	*(offer some of your merit)*

`/standing merit trades`	*(what is still waiting on a Game Master)*
`/standing merit cancel id:3`	*(withdraw one — your own, or any as a Game Master)*

No merit moves until a Game Master signs it off. An offer is held and posted to the sheet approval channel with Approve / Refuse buttons; a refusal asks the Game Master why and passes the reason back. Both parties are told when it lands, and it is announced in the channel where it was offered so the table sees the trade happen.

Your balance is checked twice — when you offer, and again when a Game Master approves. If you have spent the merit in between, the trade is voided rather than pushing anyone into the red.

Renown says who you are in the world. Merit is what you have earned and may hand on. A character can be widely known and hold no merit at all, or quietly hold a great deal.

◈

Activities and Quizzes

An activity is a minigame you write for your server: the bot narrates, asks for rolls, branches on the results and loops until someone stops. Fishing, foraging, a gauntlet in the training yard — whatever you script. Only a Game Master can write one; whether players can **start** one is a setting.

Running One

`/activity run name:Fishing [player:@Players] [party:@A @B]`
start an activity here. Name a player and it runs for THEM — their name on it, their buttons, their score — which is how you set a quiz for someone to sit. party: names several, who press in turn (GM only). Several runs can go at once in one channel; each answers only to its own player

`/activity list`	*(what exists — and, if the server has one, the pinned board lists them with a ▶ Play button each)*
`/activity scores name:Fishing`	*(best score per player, and how it has been played)*
`/activity stop`	*(abandon the run here — /activity run while mid-way shows you where you are instead)*

`/activity demo which:Kalidale Lore [player:@Players]`
play a built-in activity — the fishing tale or a five-question lore quiz. Name a player and it runs for THEM, so you can hand someone a quiz to sit; nothing is awarded either way

/activity demo plays a ready-made fishing game so you can see the whole system working before writing anything: a difficulty check that loops with a different excuse each time, four sizes of catch chosen by the roll, a gauntlet per size, natural 20s and 1s, and buttons to keep going or head back. It awards **nothing** — no renown, no merits, no items — so it is safe to play with.

One Run Each — or a Party

An activity run belongs to the person who started it. Several people can play in the same channel at once, each with their own prompts, their own progress and their own rewards — and one person stopping or wandering off does nothing to anyone else. Every post is tagged with whose run it is, and a button only answers for its owner. A run left untouched for a week is put away on its own.

`/activity run name:Fishing`	*(start your own run)*
`/activity run name:Fishing party:@Meliora @Dain`	*(one run for the three of you)*
`/activity stop`	*(end yours — a Game Master with none running can clear the channel)*

A **party** run is one tale for everyone named: you press **in turn** (the card says whose turn it is, and a press out of turn is refused by name), the tally is one shared pot, and the ending pays **every** member — merits, renown, a title, all of it. Each roll uses the presser's own sheet.

Some activities carry rules of their own: **once per day** or week per player, days of the week they run on, a title or a standing you need to start them, and endings that pay **once** — a second finish is still a finish, just not a payday. The refusal says which, and when you can go again.

Answering a Scene

Press the button, or **type the stat and add your own flavour after it** — both roll the same thing, but typing lets you say what your character is doing.

`wis I survey the reeds where the current slows`	*(rolls WIS, prints your words)*

A typed roll only answers the scene if the stat is one that step accepts; anything else falls through to an ordinary roll, untouched. Your stats are shown alongside the result either way.

A Second Chance

After a roll the tale **waits** rather than moving straight on. If you have a reroll to spend you are offered one, alongside a **Carry on** button:

`Reroll (2 left)`	*(spend one and roll again)*
`▶ Carry on`	*(take the result and continue)*

Only one reroll is offered per roll — the second result stands, and the tale moves on. If you have none left, or the scene was an ending, it continues as before without stopping to ask. Your progress is saved while it waits, so nothing is lost if you take a moment to decide.

*In **/activity demo** the reroll is **free** and always offered, even with none left — a dry run should not quietly cost a player their real rerolls just to see what the button does.*

Each scene posts with a button per stat it accepts. A press rolls with the presser's own sheet, honours a Hero's signature stat, and lands in the roll audit like any other roll. Writing and deleting always need a Game Master; starting one is GM-only until **/config mechanics activities players:true**.

Quizzes

A quiz is an activity a Game Master sets from the question bank: a question, then a button per answer — or a box to type into — marked right or wrong on the spot, with the explanation after, and a score at the end. The bank prefers questions you have never been asked, so a second sitting is a different quiz.

The Fallen

When a character is brought to 0 HP they are down, not gone — whether that is the end is the Game Master's call. **/existence kill** makes it final and writes them up.

The fallen take no further part. A dead character cannot roll, cannot answer an activity, cannot fight and cannot apply for new work — and a dead **NPC** is the same: it cannot be spoken as with **/npc say**, cannot roll, cannot be fought as, and the auto-pilot passes over it rather than taking its turn. Nobody can attack one either.

Refusals are private. A slash command answers only to whoever ran it; a typed roll is answered by DM, falling back to a channel reply if your DMs are shut — being told your character is dead in front of the table every time you forget is its own small punishment.

Nothing is deleted from the character. A fallen one keeps their whole record, so a revival costs nothing and the account can be rebuilt. Until they are brought back they cannot roll: the fallen take no more actions.

Reference

What the Stats Do

`/char stat`	*(what each stat is for, in plain words)*

How Rosters Are Ordered

Every list of characters reads the same way: **Heroes first** as their own group, then by **knight order**, then by **class**, then alphabetically. Characters with no order or no class sort after those that have one, rather than jumping the queue.

***NPCs sit below the players**, however senior their order — the two are separate halves of a list rather than interleaved. Within the NPC half the same ordering applies. Mixed lists like **/existence heal global:Everyone** print each group under its own heading.*

Derived Stats

Max HP is **CON plus a flat base**, 2 by default — so CON 10 gives 12 HP. A Game Master can change the base for the whole server with **/config mechanics hpbase base:3**, making it CON+3; set it to 0 for max HP equal to CON alone. Everyone's ceiling moves the moment it is changed, players and NPCs alike, though current HP is left where it is — run a rest or **hpfull @Players** to top people up.

Stat	Formula	On change
Max HP	CON + base	HP always maxes
Max Rerolls	LCK	Rerolls always max
Heal tracker	White Knight + WIS ≥ 5	Appears / disappears automatically

Telling the GMs Something

`/feedback send`
tell the GMs what you think — pick a room, score it 1–10, say your piece; they see who wrote it, no one else sees it happened

`/feedback send room:General quest:…`
name the room to go straight to the form (blank opens a menu); name a run you were on or ran and the GMs' card says which one

---

Penned by the DDice Scriptorium · May your rolls be ever in your favour
